Give us the Guernsey Cow for profitable dairying and there are none handsomer.

For building up a dairy herd from common stock, there is none to compare with the Guernsey sire.

The new list of young bulls, 8 months to 2 years old of the famous Yeksa and Materna families, recently issued by Helendale Farms, has met with so much approval, and is so nearly disposed of, that a supplementary list has been added, this giving a few more opportunities to secure a well bred sire at reasonable prices.

They are tuberculin tested and guaranteed. They will be disposed of in the order in which acceptances are received.

List on application to above address.

Two Good Bull Calves For Sale

Festa's May Masher

Free Silver Masher

Both born in December 1913.

Both sired by Jardiniere's Masher 20957, whose dam was a daughter of May Rose King 8336, A. R. 41.

Both dams sired by King Francis 13500, a son of May Rose King 8336, and now under A. R. test.

Both good individuals.

Write for pedigrees and prices.

Westbury, Long Island, N. Y.

Bethany, W. Va.

The Agricultural Guild

Offers for sale **at moderate prices** a few bull calves **good enough to head choice herds,** and at low prices. Bulls that will improve most herds. In herds belonging to the members of the Guild are found the following bulls :

Imported Border Raider 22243

He is a show bull of very high quality, which he impresses on his calves. He carries 30 per cent. of the blood of May Rose II.

Imp. Pride of Day 1849 P. S.

He was a King's Cup winner on the Island. His full sister produced 583 pounds of fat as a two-year-old. His calves are uniformly good.

Stranford's Glenwood of Pinehurst VII. 17392

This bull furnishes the best combination of the Selma, Dairymaid, Stranford Princess and Glenwood blood to be found. His calves are very choice.

Besides these great bulls, our herds contain sons or grandsons of Governor of the Chene, and King of the May.

With the best of bulls, and two hundred cows, one-half of which are tested, we are in a position to breed Guernseys intelligently.

SPECIAL OFFER---Lady Dudley's Diamond 17977

This is a strong bull of good conformation. His dam has just completed a record of 13000 lbs. milk and 610 lbs. fat. His sister, Marshall's Lady Dudley, Class G, has made 6260 lbs. of milk and 290 lbs. of fat in five months. He is sired by Polo III of the Vauxbelets, a prize winning bull at the head of the J. P. Morgan herd. This great four-year-old bull should head some good herd.

We can furnish a carload of high producing grade cows at from $100 to $200 per head

We are Breeders, not Dealers

We offer for your selection choice young bulls backed by good records. We price them worth the money. We veal all bull calves that are not reasonably sure to improve the dairy stock of the country. We guarantee satisfaction.

All our Herds are Tuberculin Tested

Send for price lists to

Guernseys Deserve Good Ensilage

To keep ensilage fresh, sweet and succulent from the time the silo is filled until the last forkful is fed, you need to protect it from heat, cold and moisture. The

NATCO IMPERISHABLE SILO

is built of vitrified clay hollow blocks which contain two dead air spaces. The non-porous quality of these blocks and their glazed sides exclude all air and moisture. They make a silo wall that is

Weatherproof, Decayproof, Fireproof, Verminproof

The "Natco never needs painting—no hoops to tighten—no continual repair bills. It lasts for generations and keeps ensilage in perfect condition *always*. Attractive in appearance—an asset to your permanent farm buildings. *Any mason can erect it.*

Write today for illustrated book No. V. describing the construction of this better silo—mailed free.

National Fire Proofing Company

Syracuse - - - - - - - New York

Donald of Ellenwood 16329

One of our herd bulls, is certainly a splendid individual. His pedigree shows such individuals as Glenwood's Main Stay 6067, Mainstay 3789, Glenwood Girl 6th 9113, Sheet Anchor 2934, Manager 3393, and other famous A. R. blood. He resembles very much Old Sheet Anchor. Our other herd bull, Glenwood's Main Stay 24th 12664, who is sire to Donald, has proven himself a worthy sire.

About half of our cows have been admitted to the Advanced Registry with creditable records. Their blood traces back to such ancestors as Divan 5846, Pat of Haddon 3919, Sheet Anchor's Rutila 9170, Glenwood Boy of Haddon 4605, Glenwood's Champion 15639.

Write for price list and descriptive breeding of young bulls from A. R. cows. We are also breeders of select Berkshires. Visitors are welcome.

Molassine Meal

MADE IN ENGLAND

Is Not An Excuse For Selling Raw Molasses

It is a scientific feed, made under a patent formula with 20 years experience of expert feeders back of it.

It is made by a *specially prepared process* **which produces a feed absolutely unlike anything else in the world.**

For 20 years it has watched imitators come and go, but to-day Molassine Meal is the one and only feed of its kind that will produce the results your stock needs.

You need have no fear about the keeping qualities of Molassine Meal—it has no "expiring date" when it ceases to be good. Molassine Meal *always* **gives satisfaction.**

Guernsey Cow Owners

are not deceived by "something just as good." They know there is nothing that does the work like
MOLASSINE MEAL

Twenty years of world approval of this unique feed warrants your faith in it for your

Cows, Horses, Pigs, Sheep and Poultry

We will be pleased to send you our latest book—just off the press—telling you what feeders, whose reputation is of the highest, say about this feed. Just a postal card brings it to you by return mail.

You Are Sure of Barn Efficiency When It's a James-Built, James-Equipped Barn

We believe you Guernsey breeders will agree with us that the planning and building of a barn, and the work of equipping it, are of practically equal importance.

When it comes to building your new barn, or remodeling the old one, you certainly want it so that the equipment you buy will give you the greatest possible service—with less work and bigger profits sure.

Big breeders everywhere say that James equipment is best in *any* kind of a barn, old or new. But we know that James equipment is *at its very best* when the barn in which it is placed is designed and built with a view to economical and efficient management all along the line.

We would like to tell you more about

JAMES Sanitary Barn Equipment

James Mfg. Co., B. P. 1, Cane St., Ft. Atkinson, Wis.

Please send me your Free Barn Plan Service, also the Catalogues checked: Stalls, Stanchions, Etc. (); Carriers (); Ventilators and Water Buckets (). I expect to build about _____ or remodel about _____ will want to take care of _____ cows.

and about the James Barn Plan Service that gives you the best kind of a barn for the best kind of equipment. Please write us what you are particularly interested in—Barn Plans, Stalls, Stanchions, Pens, Ventilators, Carriers, Water Buckets. Fill out the coupon and mail today.

USE DRIED BEET PULP

For Cows on Pasture

Most dairymen find it pays to feed a liberal portion of ***Dried Beet Pulp*** when cows are on pasture. This palatable, vegetable ration moistened and fed twice a day whets the appetite, stimulates the digestive fluid, promotes greater milk yield, prevents constipation and greatly lessens the danger of bag troubles.

LARROWE'S DRIED BEET PULP
Trade Mark Reg. U.S. Pat. Off.

Here is the Mixture used daily by the Connecticut Agricultural Experiment Station in producing from a Holstein Cow for the year ending Feb. 23rd, 1914, 24,175 lbs. of milk and 1038 lbs. of butter.

12 pounds Clover Hay
16 pounds Grain Mixture
16 pounds Dried Beet Pulp

gives just the necessary bulk and succulence to the dairy ration. As pasture fails, you can increase the portion of ***Dried Beet Pulp,*** sustaining the milk flow of every animal at the highest point and really affording "June Pasture the year 'round."

We give at the sides, two examples of rations including ***Dried Beet Pulp*** which you will be able to compound at home. In case of scarcity of other feeds a good ration may be made from mixing 10 lbs. of ***Dried Beet Pulp*** and 3 lbs. of Cottonseed Meal. As ***Dried Beet Pulp*** is a natural laxative, it is generally ***not advisable to use linseed meal with it.***

AVOID DISAPPOINTMENT
Place Your Order NOW

Larrowe's Dried Beet Pulp will keep indefinitely. Therefore, we would advise you to order in liberal quantities to insure having a supply to last you through the season and to protect yourself from loss when pastures fail. There may be a shortage before the 1914 crop is ready for market. Better place your order now. Your feed dealer carries it in stock, or can get it for you.

Prof. J. A. McLean of the Massachusetts Agricultural Experiment Station recommends the following summer ration when cows are on grass and green feeds:

1 part Bran
1 part Cotton Seed Meal
2 parts Corn or Hominy
4 to 10 parts Dried Beet Pulp

Specify Larrowe's Dried Beet Pulp

when you order and you will be sure of getting the best grade of dried beet pulp produced in this country.

ASSOCIATED BREEDERS AT WEST SALEM, WIS.

Attention Dairymen

Friday, June 19, 1914

The Western Guernsey Breeders

will hold a summer meeting at the homes of the West Salem, Wisconsin Breeders. The program has been carefully prepared and it will pay you to be there. The forenoon will be spent in visiting the many fine herds of Guernseys in the vicinity. There will be "autos" enough to accomodate all. At noon a picnic dinner will be served to which all are welcome. Immediately following the noon hour,

CHARLES L. HILL

former president of The American Guernsey Cattle Club will speak on "Wisconsin as a Guernsey State." Mr. Hill is one of the Guernsey breed's strong men and no effort should be spared to hear him.

PROF. WM. H. CALDWELL

Secretary of the American Guernsey Cattle Club will speak on "The Productive Capacity of the Guernsey Cow as seen in Public and Official Tests." Mr. Caldwell has long been Secretary of the Cattle Club and what he says should be of particular value.

PROF. C. P. NORGROVE

Wisconsin's new Superintendent of Farmer's Institutes will speak on "Alfalfa and Clover in Relation to Dairying." Prof. Norgord has made a life study of these crops and will give you something worth your while.

West Salem, Wis., is on the main line of the Chicago, Milwaukee and St. Paul Railroad, and the Chicago and Northwestern Railroad. Direct train service between Chicago, Milwaukee, Madison, La Crosse, Winona, St. Paul, Minneapolis, Mankato and Rochester.

YOU'LL BE MIGHTY WELCOME.

Guernseymen Attention

Friday, June 19, 1914

The Western Guernsey Breeders Association

Will hold a summer meeting at the homes of the West Salem, Wisconsin, Breeders. Besides the splendid program, you will have an opportunity to visit some of the finest herds of Guernsey cattle.

Oak Grove Farm

Of which Mr. A. R. Lewis is proprietor, is one-half mile north of town. His herd numbers 40 head of splendid individuals. They are of May Rose and Yeksa breeding. His present herd bulls, King of the Roses and Roberts Boy of Salem, are classy animals out of great cows and will be well known later.

West Salem Farm

Of which Mr. A. I. Stubbs is proprietor, is right in town. Mr. Stubbs has 75 head of very choice cattle. He had the extreme good fortune to own and use Bob Rilma, the only son of May Rilma, who has just broken all world's records with the production of 1073 lbs. fat.

Guernseydale Farm

Of which Mr. C. D. Griswold is manager, is two miles south of town. Guernseydale is new and modern, housing about 50 head of registered Guernseys. The herd bull, King Masher's King is a superb individual and his dam and grandam have just finished records of over 700 lbs. fat. They have several bulls, nearly old enough for service, of May Rose and Masher Sequel breeding.

Snowdoun Farm

Of which Mr. H. D. Griswold is proprietor, is one-half mile west of town. It has been the home of Guernsey Cattle for thirty-five years. The present herd consists of 60 head, every mature cow of which is in the Advanced Register. They are large, with splendid udders and teats. Several cows are now milking 50 lbs. daily under test. King of the May's King, a son of King of the May, heads the herd.

The above breeders will offer for sale to persons desirous of starting a herd or adding good blood to their present one, about 50 head of registered females. If in the market for Guernseys, don't miss this chance.

Sanitary Cow Barns

Mean Healthy Cows and Pure Germ-Free Milk

Floor your stalls with Cork Brick—and you do more to protect the life and health of your herd than by any other one means.

Cork Brick consist of finely ground cork and asphalt, combined by great pressure and heat. They are *sanitary* because nonabsorbent, absorbing less moisture than any flooring in use, hence retain no poisonous and germ laden acids and unhealthy odors. The surface is smooth, easily cleaned and dries quickly. No lime or other disinfectants needed. Use

ARMSTRONG CORK BRICK

and insure your herd! Many valuable animals are crippled and lost because of hard slippery stall floors. Cork Brick are never slippery—wet or dry. Save your cows from rheumatism, garget and other udder troubles caused by lying on hard, cold, clammy floors. Cork Brick maintain a warm, even temperature the year around. You save on bedding—no artificial heat required.

Cork Brick are resilient—easy under foot. For live stock it is almost like standing on turf. Durable, soundproof and easily installed in old or new barns.

Thomas Nyland, Manager, Highland Farm, Peterboro, N. H., says :

The Cork Brick have been in use in our cow stalls for a year or more and give entire satisfaction, showing no signs of wear. They are always dry and not slippery, thus avoiding big knees and other troubles. We think so well of them that we expect to use them in all our horse stables soon."

We have many scores of such enthusiastic testimonials that we'll gladly send on request. Write us today for sample and beautifully illustrated literature telling the whole story.

Milk Production on Pasture

Summer is again with us and cows going out to grass, whether dry, strippers or in the flush of milk, are expected to find everything they require outdoors, not alone their maintenance, but enough to produce 40 or more pounds of milk. Can they do this? *No*, it is often impossible.

The heavy producer needs the assistance of concentrated feeds to prevent her converting part of her own flesh into milk.

A forty pound cow would require 100 lbs. grass, which is more than she can find or has capacity for.

Therefore help your cows by feeding UNION GRAINS. The only palatable, safe and economical grains ration. They will eat it greedily, when they refuse the imitation.

The good work which has been done by these associations is to be commended, and it is hoped that the breeders will endeavor to make same as successful as possible.

The Transferring of Guernseys.

At the recent annual meeting, section 8 of the by-laws, relating to the requirements for transfer of Guernseys in the Herd Register, was amended so as to read as follows.

TRANSFER OF OWNERSHIP.

"Every change of ownership must be recorded upon the records of the Club.

It shall be the duty of the seller to file with the Secretary the necessary application for such transfer on the regular forms furnished by the Club.

It is forbidden to transfer to any other person than the actual purchaser. Sellers doing so, lay themselves liable to the penalties imposed by the Constitution and By-Laws.

Buyers are warned that the transfer must read direct from the person from whom they purchase the animal.

In case of the neglect or refusal of the seller to make application for a transfer, a record of transfer may be made by vote of the Executive Committee on satisfactory evidence of sale and delivery.

No Transfer shall be cancelled except in case of error or by vote of the Executive Committee.

The original Certificate of Entry on which there is a copy of the sketch of the color markings as filed at the time of registration of the animal must accompany the application for transfer. No record shall be made on said certificate except at the office of the Club by direction of the Secretary.

An application for the transfer of a female in calf must state the date of service and name and number of the service bull.

Transfer fee, in all cases, $1.00. The Club looks to the seller for the payment of all transfer fees.

Failure to comply with these provisions for transfer may be deemed an infraction of the By-Laws, and the offender will be subject to such penalty as is within the power of the Club."

Breeders will note that the above does not call for any material change in the manner of transferring animals, but it makes provision to correct certain practices which have caused some annoyance and trouble in registering progeny.

To transfer an animal the following procedure is necessary:

First: Send to the office for the regular application form.

Second: In filling out this form, see that the following are complied with.

(a) Give name of the actual purchaser as the one to whom the animal is to be transferred. Do not give the application in blank to allow the filling in later of whatever name the party chooses.

(b) Be careful to give the date of sale correct. It does not always follow that this is the date that the transfer is made. Record of ownership is made to correspond with the date of sale given on the application.

Third: Be sure to forward with the application the original certificate of entry of the animal transferred. Note in doing so that the animal to be transferred corresponds with the sketch of the color markings given on the certificate of entry. The application form requires a statement from the seller that he has compared the animal with the color markings given and that the animal he delivers agrees with the sketch.

Fourth: Do not neglect to state date of service, and name and number of the ervice bull on all applications for transfer of a female in calf.

In the above it will be noted that buyers are warned that the transfer must read direct from the person from whom they purchase the animal and they are also urged to compare the animal with the sketch on the certificate so as to make sure that they receive the animal that was registered as the one they bargained for.

It is believed by this means that the club surrounds the transfers with every precaution possible to protect both buyer and seller.

The above regulations are now in force.

IMPORTANT BREEDERS' MEETING.

The Ohio and Eastern Guernsey Breeders' Association are to be the guests of Waddington Farms, Wheeling, West Va., on Tuesday, June 18th.

Pres. Baker, of the Ohio Association is preparing an excellent programe, including an inspection of the herd.

Eastern breeders can leave Philadelphia at 8.50 P. M., arrive Wheeling 9.40 next morning without change of cars.

Let every one attend who can and make this meeting a success.

MAY RILMA 22761, A. R. 1726

Champion Dairy Cow of All Breeds

Moves to Head of Class A

Year's Record: 19673 lbs. Milk 1073.41 lbs. Butter Fat

THE making of large A. R. records is attracting more attention from the up-to-date dairymen as each new, high mark is made. When on May 1 the Guernsey cow, May Rilma 22761, bred and owned at Chesterbrook Farm, Berwyn, Pa., completed her official year's work with a record of 19673.00 lbs. milk and 1073.41 lbs. butter fat, it was a matter of not only National, but International interest. An important event in Dairy History had been successfully completed, and the honors won are a source of pride, not only to lovers of the breed to which she belongs, but to all dairy cattle interests, regardless of breed affiliation.

The world's pennant in the last year or two has been held successfully by a Guernsey, a Jersey, a Holstein, and now again by a Guernsey cow. The stimulus of friendly competition inside and outside breed lines is accomplishing much for scientific dairying.

Chesterbrook Farm, established a good many years ago by the late A. J. Cassatt, former President of the Pa. R. R., and now owned by his son, Capt. E. B. Cassatt, is one of the finest farms in Chester County, long famous for its natural beauty. The farm, just a mile square, with its rolling fields of blue grass, much of which has not felt a plow for thirty years, is a delight to the eye. The breeding of thoroughbreds for the race course, has long made the farm well known among lovers of horse flesh, and many bred here have won laurels on the race course.

While an excellent herd of Guernsey cattle has been kept for some time at Chesterbrook, it is only recently that the possibility of winning fame in the dairy world has been seriously considered. When in June, 1913, May Rilma astonished her owner by producing over 1800 lbs. of milk and 100 lbs. of butter fat in one month, it looked as it she should be given a chance to show what she could do. As a four year old, under herd conditions, she had made 589.07 lbs. butter fat from 12145.60 lbs. milk, with an average test of 5.02 %. Five and six hundred pound records, even from young cows, have become quite common in the last few years and cease to attract the attention they once did.

That this young cow had in her the material for a world's record was not thought of at that time.. Her bull calf, Bob Rilma 16161, was sold to another breeder along with several others for $20.00. This youngster was exhibited on the Show Circuit of the Middle West for two seasons and won many prizes as Junior bull calf and as a two year old, before his dam had come into the public eye.

May Rilma's sire, Mars of Woodcrest 9290 A. R., has nine daughters in the Advanced Register, and including May Rilma's re-entry, the average butter-fat yield for the ten records is 545.95. Her daughter, Bessie Rilma is now under test in Class F, as a two year old, and is making a good record. Her full sister, Nellie Rilma, has a record of 10623.90 lbs. milk and 558.03 lbs. butter fat; a half sister by the same dam, Miss Rilma, has a record of 12186.20 lbs. milk and 586.22 lbs. butter fat. It is thus seen that she comes from producing families on both sides, with excellent records back of them.

May Rilma is a strong, rugged cow, rather larger than the average of the breed and weighed 1355 lbs. at the end of her year's work. In the making of her first record she consumed an average of 8.5 lbs. grain daily, costing approximately $5.50 per month, or $66.00 for the year, to produce 589 lbs. butter fat. In her second and last record she consumed 18 lbs. grain daily and 3 each of beet pulp and molasses, at a monthly cost of $11.50 or $137.00 for the year. Ensilage and hay, she had what she would eat each year, and for a few months last winter she was given carrots in addition. The total cost of feed for the year was $270.83 charging feed at retail prices, viz:—Bran, $31.00 per ton; Hominy, $32.00; Gluten, $33,00; Cottonseed Meal, $36.00; oil meal, $38.00; Beet pulp $28.00; molasses 15c per gallon; ensilage at $6.00 and hay at $20.00 per ton. Four tons of straw (estimated) was used for bedding, which is much more than offset by the manure returned to the farm. One quarter day's labor for one man at $1.75 makes a charge of $147.35 for the year, and to this should be added a sum for fitting up and lining a box stall, where she could be better protected and more comfortable than in the stanchions with the rest of the herd. Feed and labor thus amount to $428.18, plus cost of stall fitting. Chesterbrook milk retails for twelve cents per quart. 19673 lbs. of milk, or about 9500 quarts, should return $1140. Allowing one third, or four cents per quart, for cost of delivery, leaves $760.00. This, less the cost of feed and labor, shows a net income of $331.82 for the year.

This cow was kept on the same grain ration, made up of a few kinds only, throughout the year, contrary to the belief that a greater variety and frequent changes help to keep up the appetite. Each cow is really a separate and distinct problem, whose whims must be catered to. May Rilma would not eat ground oats, beets, and some other feeds, and was considered very notional. The manufacturers of mixed stock feeds besieged the farm to have their special brand offered to this Queen of the Dairy World; her caretaker would have none of them, but stuck tenaciously to the ration which she liked, and would experiment with no others, despite the importunity of the agents.

In this connection credit should be given to her caretaker, Albert Van Tuinen, who has charge of the dairy and herd. The only time he left the farm during the year was for his monthly visit to his barber. The milking was done by "Yon-co" or little Yon-co when his father was away.

Yon-co is the Holland name for John and John Bartosch appears regularly as milker on the monthly reports. To the faithful work of these men, co-operating in the case of the cow, belongs much of the credit that May Rilma has won.

The American Guernsey Cattle Club was the first to inaugurate the officially supervised yearly Advanced Register system as the only correct measure of a dairy cow, so the Club has taken the lead in its system of authenticating its records, particularly those that are above certain requirements and of national interest to the dairy world.

In the case of May Rilma's record just completed, twelve monthly tests have been taken of two days each, followed by ten automatic re-tests for as many months, one re-test being continued for a week to give more extended observation of her work. In addition to this regular supervision by the Pa. Experiment Station, in accordance with the Club's custom where large records are being made, outside State representatives are employed to make special tests and reports to the Club's Advanced Register Dept. Seven of the leading dairy states had their Experiment Stations conduct official tests and reported the results of their observation to the Club's office. The Dairy Division of the U. S. Dept. of Agriculture at Washington sent one of their experienced men to observe and test the work of this wonderful cow.

It is safe to say that no yearly record was ever conducted under more careful supervision. This systematic work has been highly commended by all interested observers and sets a standard for all large records.

Entry of Additional Record. Previous year's record: 12125.60 lbs. milk; 589.07 lbs. butter fat. Published in Vol. XXVI.

FEED RECORD.

May, 1913. 10 lbs. grain daily of the following mixture: 250 lbs. bran, 50 lbs. each hominy, cotton-seed meal and oil meal, 100 lbs. gluten; 3 lbs. beet pulp, 2 lbs. molasses, hay, with pasture.

June, 1913. 18 lbs. grain daily of the following mixture: 250 lbs. bran, 50 lbs. each hominy, ground oats, cotton-seed meal and oil meal; 3 lbs. beet pulp, 2 lbs. molasses, green feed.

July, 1913. 18 lbs. grain daily of the following mixture on 1st, and from 11th to 31st, 15 lbs. daily from 2d to 11th: 250 lbs. bran, 50 lbs. each hominy, cotton-seed meal, ground oats and oil meal, 100 lbs. gluten; 3 lbs. each molasses and beet pulp corn fodder from 1st to 15th, clover from 17th to 31st.

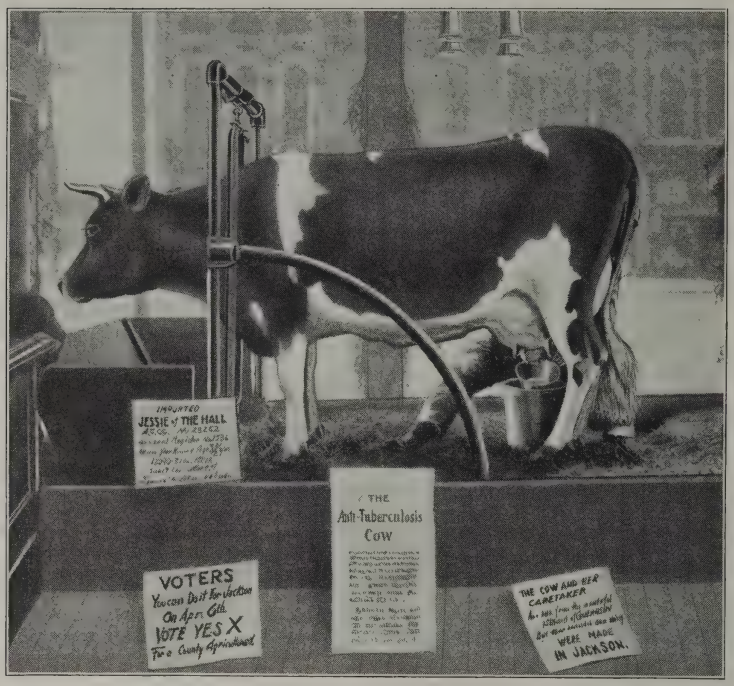
Aug. 1913. 18 lbs. grain daily of the following mixture: 250 lbs. bran, 50 lbs. each hominy, cotton-seed meal and oil meal, 100 lbs. gluten; 3 lbs. each beet pulp and molasses, corn fodder, alfalfa, clover with pasture.

Sept. 1913. Same grain ration as given in August from 1st to 3d and 9th to 30th from 3d to 9th 12 lbs. daily of same mixture: 3 lbs. each beet pulp and molasses, corn fodder and clover pasture.

Oct. 1913. Same grain ration as given in August; 3 lbs each beet pulp and molasses, green clover and pasture.

Nov., 1913. Same grain ration as given in August; 3 lbs. each beet pulp and molasses, 25 lbs. ensilage, with pasture.

Dec. 1913. Same grain ration as given in August: 3 lbs. each beet pulp and molasses, ensilage, alfalfa from 8th to 31st clover hay.



Jan. 1914. Same grain ration as given in August; 3 lbs. each beet pulp and molasses, 16 lbs. carrots, ensilage, alfalfa, clover hay.

Feb. 1914. Same grain ration as given in August; 6 lbs. each beet pulp and molasses, carrots, ensilage and clover hay.

Mar. 1914. Same ration as given in February.

April, 1914. Same ration as given in February; no ensilage 12th.

A Guernsey Exhibit

A NOVEL exhibition calling attention to clean milk was recently made in Jackson, Michigan, by Dr. C. G. Parnall, who placed in the window of the Stern Furniture Co. for one week, a Guernsey Cow.

The following is an item as printed in one of the Jackson papers.

COW BEING EXHIBITED IN STORE OF STERN FURNITURE COMPANY. "IMPORTED JESSIE OF THE HALL," ANTI-TUBERCULOSIS COW, IS GIVING ANTI-TUBERCULOSIS MILK FOR ANTI-TUBERCULOSIS PURPOSES; BUY A BOTTLE.

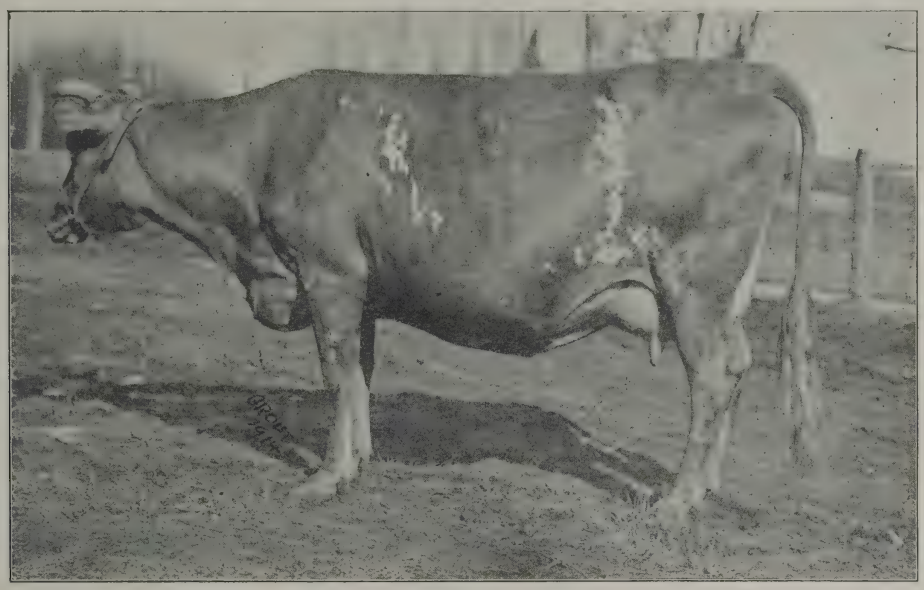
"Have you seen the cow?"

"Are you interested in stamping out tuberculosis?"

If you answer "no" to the first question and "yes" to the second, then your next duty is to hasten to the window of the Stern Furniture Company store and see the anti-tuberculin cow produce anti-tuberculin milk for an anti-tuberculosis purpose.

Among the unique, instructive and most interesting exhibits of all those made during the "Made in Jackson" week is the one on display at the Stern Furniture Company. To be sure it does not come from within the city of Jackson, but it is from Jackson county and it represents one of the industries which is doing most to make Jackson county famous the world over. The exhibit is that made by Dr. C. G. Parnall, and it is a registered Guernsey cow, fresh from the famous St. Austell farms, north of Jackson.

"Imported Jessie of the Hall," is the name of the docile creature which you will find standing in the window munching alfalfa grown on a Jackson county farm. Look at her. You are gazing upon a cow which produced in one year, when 3½ years old, 12,000 pounds of milk, containing 540 pounds of butter fat, and capable of being turned into 648 pounds of the best butter you ever had the privilege of eating. For those who can figure better from the quart standard the information is given that 12,000 pounds of milk is equivalent to about 6,000 quarts. Now get out your pencil, Mr. Farmer. If this cow's milk was only worth 8c a quart and you owned her, wouldn't her earnings beat anything you now have on your farm?



Well, "Imported Jessie of the Hall" is worthy of more than a passing glance for other reasons than that she has a record. She is producing milk right in the window of the Stern Furniture Company store. That milk comes from a cow which is immune to tuberculosis. It is anti-tuberculosis milk. It is guaranteed to be pure. Each morning at 5 o'clock, before many of us are up, "Imported Jessie of the Hall" will be busy fighting tuberculosis by giving forth her good rich milk.

In the presence of the people a few moments later the milk will be strained, cooled and bottled and offered for sale at 15 cents a quart. The proceeds from the sale of this milk at this price goes into the hands of the district nurse to fight tuberculosis in Jackson city. For "Made in Jackson" week you are asked to get the habit of buying a bottle of this milk, and by so doing join with "Imported Jessie of the Hall" in her fight to down the white plague in this city. Show your appreciation of a good cow and a good cause by buying at least one bottle.

While both Mr. E. E. LePelley, the milker, and "Imported Jessie of the Hall" came from the Isle of Guernsey, each of them has the honor of having made their records in Jackson county. Together they have set "some" pace for others to follow.

Minnesota Champion Guernsey Heifer

Starlight's Coley 33440 A. R. 2634, 583.85 lbs. Butter Fat

Starlights Coley 33440

THIS heifer is the last daughter of the grand old bull Starlight's Excelsior and adds another gem to his crown. She is the strong, rugged type, weighs 1180 pounds, and has just dropped a fine bull calf to the service of May King of Linda Vista. She will be re-entered, and is a good prospect for the seven hundred pound class.

While five hundred pound heifer records are becoming quite common, Starlight's Coley's of 583.85 lbs. butter fat from 10975.80 lbs. milk puts her in a very enviable position in her own state, Minnesota. At the Jean Du Luth Farms, up to the present time, they have twenty Guernsey records that average 503 lbs. butter fat, while twenty Red Polled records average 393.90 lbs. butter fat. In live weight, the Red Polls average only about 100 lbs. heavier, with their 1234 lbs. as compared with the Guernseys average of 1139 lbs. for fifteen head of each breed. In the last few years, sixty records have been made practically under farm conditions which average 400 lbs. butter-fat.

That Guernseys adapt themselves readily to extreme climatic conditions and do well even in the far north, is amply proven by the fine records made at the Jean Du Luth Farms.

The Guernsey Cow

By W. O. Mills, Pres. Indiana Guernsey Breeders' Association

THE Guernsey Breed had its origin centuries ago, and it is pretty generally supposed that they come from the old race of cattle known as the Brittany and Normandy Cattle. Very early the breed gained recognition. It is interesting to note that both the Jerseys and the Guernseys derived their distinctive color characteristics from a common ancestry, bulls selected from the best animals in Normandy. The breeders upon the Island of Guernsey having selected bulls of a red color and large size, and the Island of Jersey breeders having confined their selections to bulls of fawn and white color with a preference for smaller size. It is remarkable and worthy of comment that the breeders of these two islands lying so closely together never yielded to the temptation of crossing the breeds. As a result of their steadfast adherence to certain well defined principles of breeding, we of this generation are enjoying the benefits of two noble breeds of dairy cattle, which in their special sphere of usefulness, have no equals in all the range of dairy breeds.

The first importation of Guernseys to America, according to the most authentic records in the possession of the American Guernsey Cattle Club, was about 1830. Following 1850, when a few more were brought to the dairy farms in the vicinity of Philadelphia, importations were irregular until the formation at New York in 1887 of the American Guernsey Breeders' Association. As late as 1877, there were only 193 Guernseys registered with the Secretary of the American Guernsey Breeders' Association, and of these 114 were listed as having been imported. In America the Guernsey breed of cattle received comparatively scant recognition until the holding of Dairy Cattle tests at the World's Columbian Exposition at Chicago in 1893, when phenominal records were made by the Guernseys entered in the contest. Then came the Pan-American Exposition dairy tests in which the Guernseys took first honors. In the later competition the Guernseys butter scored an average of 96.34 points compared with 95.80 points of the Jerseys, and in the color score the

Guernseys had an average grade of 14.97 out of a possible 15 points, the best record of any of the ten breeds represented in the contest. The five Guernsey cows in the Pan-American test for the six months produced 1429.43 pounds of churned butter valued at $357.36, yielding a net profit of $220.37, the best record of any breed in profit and almost the first record in the amount of butter produced. The Holsteins leading in this regard by only three-fourths of a pound. In this test of cows each of ten breeds the Guernsey Cow, Mary Marshall, a ten-year-old, led the list, producing in six months 5611 pounds of milk yielding 301.13 pounds of butter-fat.

During the time since these notable tests, the Guernsey breed has made rapid advancement. It is now recognized as one of the best dairy breeds and the herd books of the American Guernsey Cattle Club contain the registry of thousands of famous cows. One thousand pounds of butter in one year is truly a wonderful record of production, and yet there are Guernsey cows that have accomplished that feat and others equally as good are coming in to form. Take for instance the yearly butter record of the cow Sunbeam 15439. She was nine years old when she was tested and during the year she produced 857.1 pounds of butterfat and her butter product for the year total 1000 pounds. When speaking of high producing Guernseys, we need to make special reference to the performance of Dolly Bloom 12770 and her daughter, Dolly Dimple. Dolly Bloom, as a two-year-old, made a record of 8841.58 pounds of milk, yielding 453.86 pounds of butter fat. As a three-year-old her milk record increased to 12674.83 pounds, yielding 623.94 pounds of butter fat. As a five-year-old she gave 17,297.51 pounds of milk yielding 836.21 pounds of butter fat. But great as the performance of Dolly Bloom, her daughter, Dolly Dimple, distanced her in the race. Dolly Dimple as a two-year-old produced 14,009.13 pounds of milk and 703.36 pounds of butter fat. As a three-year-old, 18458.80 pounds of milk and 906.89 pounds of fat. This is over nine tons of milk and over half a ton of butter in 365 days.

The Grade Guernsey is also in demand, commanding large prices. There are many records of over 500 pounds of butter-fat made by Grade Guernsey cows, and many more that have shown great improvement from the first cross, continuing to improve on each following cross.

Guernseys were first brought into Indiana about 1896. In 1904, there were only five breeders. By 1910, there were little less than fifty breeders. In 1911, about 75, and up to date, about 150. This shows a very rapid increase in the last three years. It also signifies the great interest that is developing in this state and that the merits of the Guernsey breed with its excellent qualities is being more and more recognized and appreciated. The Guernsey Cow has honestly earned the right to be called the long distance cow, as she is a persistent milker, giving milk rich in butter fat.

Other breeds there are and always will be and they will always have their admirers, but the Guernsey has won for herself an esteem in the hearts of the dairy farmers that will be cherished from generation to generation and your sons and daughters will rise up and call you blessed if you lay the foundation of a herd of Guernsey cows. Some may say the color of the cow's hair has nothing to do with her dairy merits, but where is the man with eyes so dull that a herd of uniform color of beautiful fawn and white does not appeal to him, and he says to himself if not to you, "I wish them were mine."

The Dougan Guernsey Farm, W. J. Dougan, Proprietor

THE Dougan Guernsey farm is located two miles east of the city of Beloit, and comprises 155 acres of land. The herd consists of from fifty to sixty head of grade Guernseys, two pure bred cows and two bulls, thirty to forty being in milk the year round. The product is disposed of as high grade market milk in the city of Beloit. One hundred and ninety quarts of milk are produced a day for which is received ten cents per quart. Forty cents per quart is received for about fifteen quarts of thirty-two to thirty-five per cent cream, and three cents a quart for thirty to forty quarts of skim milk. Hogs and pure bred seed grains are raised in connection with the dairy business.

Mr. Dougan says, "Hearing failing, I looked about for another vocation, and naturally turned to farming as I had been brought up on a farm. I liked farming and in 1906 I purchased this place with the pre-conceived, well fixed ideal of producing the best milk that I could produce for a living price, and had two ideals in mind. One on the side of production,—to produce and distribute to the customers as nearly perfect a milk as possible. Dean Henry L. Russell has held for a long time that a good milk bacterially clean could be produced at a moderate cost and I talked with him and Professor Hastings and came to the place with the idea of getting right to the essential point of a clean, wholesome milk. It had to be practically produced and at a cost that would admit of a profit.

I had capital enough to secure the place, not to pay for it, and a small amount for starting the equipment. I had everything to buy and so the place was of a necessity placed on a paying basis from the start. It had to pay twenty per cent on the investment for improvements, capital invested and interest. The other ideal was to make enough out of it to make a living and a life. I started selling milk at 5½ cents a quart, other milk selling for from 4 to 5 cents.

"A good milk at a living price." I found that it could be done with the Guernsey cow. I have often asked myself the question "Had I started with Holsteins, could I have done it," and always I have to come back and answer in the negative. I feel that the Guernsey cow has been the large factor in my success. My milk leads all milk in the city, and I get two cents per quart over any other milk.

"Seven years ago there was but one small grade herd, owned by Mr. Marston, around Beloit, and now there are five distinct Guernsey herds and many others with sprinkles of Guernsey blood in them. Mr. Salman has the largest number of pure breds of any herd around Beloit.

"I have advertised Guernsey milk and have kept all Guernseys but competitors realize that they have to advertise Guernsey milk whether they have it or not in order to compete. I believe the milk business is the distinct field of the Guernsey for these reasons. First on account of the quality, the color, flavor and per cent of butter fat are peculiarly attractive. Second, they are economical producers. From handling of Guernseys and a close study of other breeds, I am convinced that for the practical daily workings of the cow she is extremely economical."

The production of the following animals in his herd are noteworthy; Peggy produced in May 1913, five months from calving, 1225.4 pounds of milk. In ten months, she produced 7,597 pounds of 4.2 per cent milk.

Star, in May, produced 1,313 pounds of milk. Fantine in one year produced 7,885 pounds of milk. His herd averaged two years ago 6,300 pounds of milk per cow. Cows selected at random from the cow testing associations records show a return of $1.71, $1.75, $1.76, etc., for one dollar's worth of feed. Star paid during her best month from $2.07 to $2.52 for one dollar's worth of feed.

Six men are employed to carry on the farm operations, one in the bottling room, one herdsman, one wagon man, two field men, and a chore boy.—H.

Guernseys for the Farmer

Read during Farmers' Week at Mass. Agrl. College by S. R. Parker

IN the lectures and talks to which we have all listened with so much interest in the last two days, there is one thought which must have come to many of you. The idea is this: that the marked success of almost any farming venture to-day is determined by the extra, or unusual price received for its products.

The farm that is able to command a cent or two above the market price for its milk; an extra half dollar per barrel for its apples; a quarter or half dollar per crate more on strawberries, or a few cents a dozen on its eggs, is the farm that is to-day returning the greatest profit.

Nearly all data goes to show that on such farms where the price received increases, the cost of production does not increase proportionately. In fact, surprising as it may seem, the cost of production often decreases.

As we are considering dairy cows to-day, let us take milk for example. As a rule the person who is interested enough in his dairy business to secure an extra price for his milk and cream will also become interested in the amount produced by his cows, so that the average production of his herd will gradually increase, and we all know that as the product per animal increases, the cost of production decreases.

If then, we are striving for a dairy product which will command an extra price, let us consider Guernsey milk. You are all well acquainted with the general characteristics of this product. It has that deep yellow color which is so pleasing to the discriminating customer.

Colors are popular in different classes of products. For instance, any orchardist will tell you that if you wish to produce apples for a fancy trade, they must have a color which will attract attention. They will all tell you that red apples demand the highest market price. In small fruits, red raspberries are easily sold, where a white variety could hardly be disposed of at all.

So, in milk a deep yellow color, which we find in the product of the Guernsey, is by all means the most attractive color to be found in this class of products. People accustomed to using Guernsey milk are hard to please with any other.

Guernsey milk usually contains about five per cent butter fat. This average, I believe, will be borne out by the results of the official tests, which could be furnished by the Cattle Club. This is the large item to the average farmer who owns Guernseys, or who contemplates buying them. It is the amount of butter fat which determines the number of quarts of milk required to make one quart of cream, besides being the basis for the purchase of all milk and cream at the cheese and butter factories of to-day.

Guernsey cream quickly creates a market for itself, and is one of the strongest factors in a farmer's success with Guernseys. The class of trade which demands Guernsey milk and cream is usually the class wich is able and willing to pay for extra quality and a pleasing appearance. If milk must be sold to a dealer, it is always a good plan to let him know that you have a better quality than the average, but even if you do not, a careful observation of his methods will often show that the milk from dairies which produce milk of a little better grade than others is often set at one side, and is bottled separately.

In this manner, the dealers often get their different grades of milk. Perhaps one will command a cent or two cents a quart more than the other. It is very seldom that the man who produces this milk gets any benefit from this extra amount, but it is not difficult to get; that is, a producer may be able to get a quarter or a half of the extra cent which the dealer is making on his milk.

Doctors recommend rich milk and cream for sick people, especially in certain classes of sickness. Many physicians have suggested that cream might well replace olive oil as a food, and aside from answering the same purpose it would taste a whole lot better.

For a man who has a cream trade, the Guernsey is particularly valuable on account of the high percentage of butter fat. Nor is this sort of trade difficult to secure, as the increased demand for cream at the present time is far in excess of the amount available. The farmer who produces cream has another advantage also, in that the skim milk remains on the farm with which he is able to feed his young stock. It has been demonstrated many times that the sale of cream removes the least amount of fertility from the farm of any product of which we know.

I have spent this amount of time on the discussion of the milk and cream proposition as that is usually the part that appeals to the farmer at first. He is afraid that it is going to cost him more to produce Guernsey milk. He wants to know if he can develop a market which will repay him for this extra cost.

The use of pure bred sires in dairy herds has come to be such a universal practice that large grade herds of almost any of the dairy breeds are to be found. Such herds quickly take on the characteristics of the breed of the sire. This is especially true of Guernseys, the prepotency of the blood showing very plainly in the characteristics of all the stock, so that even in the first generation we have a herd which very closely approaches in characteristics the pure bred type. A very fortunate co-incidence is that the characteristics of the color and quality of the milk are found, also. This is especially true where the Guernsey sire is used with native stock. The use of a pure bred Guernsey bull in a herd of grade Holsteins does not as a rule prove very successful. With almost any other breed, however, the combination is a decided improvement.

This, then, shows us a method by which a farmer of moderate means is able to secure a herd of Guernseys at a very little increased cost above the cost of an ordinary scrub herd. If he does not care to invest in pure bred stock, or has not confidence enough in his own business to put in the necessary increased capital, he will find even with his grade stock a very ready sale for all his surplus cattle. We often have letters inquiring for carload lots of good grade Guernsey. A town or section that can supply a demand of this sort would be able to command exceedingly good prices, as the Guernsey grade to-day even in Brighton market, is a very high priced cow to buy.

The ability of the grade Guernsey to produce butter fat at a profit has been demonstrated many times, but a test at the National Dairy Show, 1913, which was carried on for the purpose of showing the advantage of keeping records, also demonstrated the economy of the Guernsey cow in the production of butter fat. In this test a grade Guernsey cow for nine consecutive days produced butter fat, worth 33.9c per pound, at a food cost of 11.9c per pound. The second cow in this list was a grade Holstein and the food cost per pound of

her butter fat was 14.9c. The lowest cow in the list produced butter fat at a food cost of 54.8c per pound. This clearly demonstrates the value of the Guernsey for producing butter fat or cream.

Among the other records of grade Guernseys which have been accepted and published as authentic is one of 16,000 pounds of milk, and 723 butter fat, that was made in a Wisconsin cow contest. This cow was exhibited at the National Dairy Show in 1912, and caused a great deal of favorable comment.

To further demonstrate the value of the grade Guernsey, the Cattle Club has recently started an Advanced Register for grades. This department, however, is laboring under great difficulties, as people who are interested enough to secure official records on grade stock are much more likely to own pure bred cattle, and the same amount of money expended for such purpose would bring much larger returns.

We also find a market for grade Guernseys among certified milk plants, where a certain percentage of butter fat is guaranteed. These dairies are usually located within a short distance of large cities, and such places have not the facilities for raising their own stock economically.

The farmer who is located a long distance from his market has in Guernseys the most economical producers of cream and butter, and also by raising young stock has a means of converting his crops from cheap land into valuable and marketable animals.

The farmer who is located near the city has a product which readily commands an exceptional price. Thus we see that the Guernsey cow is adapted to all conditions and localities.

There are men who are dissatisfied with grade stock, even of extra quality, and such men, if they are able, at some time or other, succeed in securing at least a few head of pure bred cattle.

The fortunate men who are able to possess herds of pure bred Guernseys to-day are well aware of the fact that they have the most popular breed of the day. There is a certain satisfaction which a real breeder gets from his pure bred Guernseys, which he would not get from grade stock. The owner of pure bred stock will use more care in selection and breeding than the man who has grade stock, and it is proper that he should receive a greater reward for his labor. That this is true no one will deny, as the difference in price of pure bred and grade stock of equal quality so far as production of milk and butter fat is concerned, is very great.

The demand for young cows and heifers of this breed is astonishing. New sections of the country are being developed for the dairy industry very rapidly. In these sections, the Guernsey is extremely popular. Demands are coming to Massachusetts to-day from all parts of the world. Porto Rico is asking for Guernseys; Southern California, Australia, British Columbia, Idaho and Montana as well as many other sections are to-day buying Guernseys from New England. We need not fear an over popularity of the breed as the increase in demand for dairy products is far in excess of the increase of cows of all kinds. The market for our stock, then, is assured, and the premium placed on them because they are Guernseys is gladly paid, This, then, is really the best source of income for the farmer who is to-day far sighted enough to start with a pure bred herd.

To give an idea of the prices which the Guernseys are bringing to-day, I have made a summary of five auction sales of pure bred Guernseys which were held in the year 1913. At these sales, 330 animals were disposed of at an average price of $309. The proportion of mature animals in these sales is not large, being as a rule no greater than 50%. At one sale of 52 head, 17 cows were sold at an average price of $685. The highest price paid for a cow was $2500. The highest price for a bull was $2000.

We know of instances of individuals in other breeds bringing as high as $10,000, but where the prices have gone to such unusual heights it has usually re-acted to the detriment of the breed, as naturally many animals were much overpriced, thus leading to severe disappointment and financial loss.

The growth of the popularity of the Guernsey, as indicated by these average prices, has not been unduly forced, but is the gradual outcome of a demand for stock of great merit.

No small share of this popularity is due to the American Guernsey Cattle Club, for this club has worked with untiring effort for the promotion of the breed. It has a thoroughly live business organization that is boosting with all its might to advertise and publish the advantages of the Guernsey cow. This fact is one of the greatest importance to a man who contemplates putting on pure bred stock and is undecided as to the breed. The Guernsey club as a whole, is assisting each breeder individually. It is a matter of first importance to be connected with such an organization.

With such a market for milk and livestock of such quality as we have shown, it would seem that any farmer interested in grade or pure bred cattle would find profitable employment for his time, and real recreation in the breeding and care of a herd of Guernseys.

Editor Guernsey Breeders' Journal:—

I have just sold to Natoma Farms, Hinsdale, Ill., one of the best bred bull calves I have sold in some time, in Doctor of Sarnia 27514. He traces seven times to Bonny Boy 1097, six times to Imp. Tricksey 1760, three times to Benjamin 1921, three times to Materna 1334, twice to Yeksa 2426, and once to Glenwood Girl 1693, therefore, combining in a marked degree all of the best American families of the breed, and strongly line bred as well.

His dam, Bess of Sarnia 35366, is now making good record with her first calf. His granddams are Countess Fantine, 582.3 lbs. fat at three and one half years, and Mernalette 2nd with four A. R. records from 485 lbs. fat at two and one half years up to 664.53 lbs. at seven years.

Two of his great granddams are Yeksa Lind 650.56 lbs. fat at four years old, and Selma of Pinehurst, 762.88 lbs. fat.

Bess of Sarnia has one full sister in the A. R., and another now making large record.

Natoma Farms should get good results in the use of this bull in their herd.

CHARLES L. HILL.

To The Guernsey Breeders Journal.

Golden Elsie 2nd 33422, owned by James E. Russell, Peekskill, N. Y., is entering upon her retest in Class D in a surprisingly strong way. She calved on December 29, 1913, and in the month of January gave 1826,6 lbs. of milk testing 5.14%, giving her a credit of 93.90 lbs. of butter fat. During twenty-eight days in February, she gave 1806.6 testing 5.16 and 4.66 per cent, giving her a credit of 88.70 lbs. of butter fat. In the thirty days from January 13 to February 17, she gave 1946.5 lbs. of milk with a credit of 100.05 lbs. of butter fat—a record which has been surpassed only once by a mature cow, and never equalled by a Guernsey cow of her age.

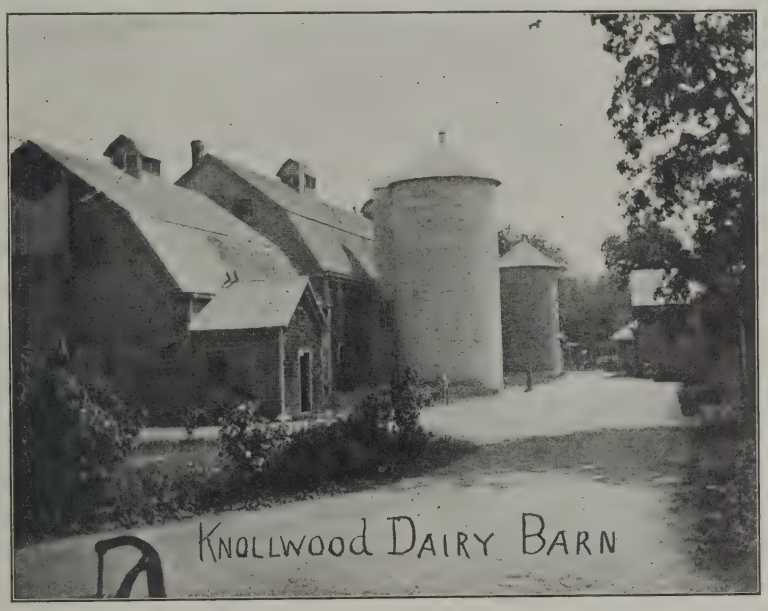
Summer Meeting of the Iowa Guernsey Breeders' Association.

The Summer meeting and Field Day of the Iowa Guernsey Breeders' Association will be held on June 25, 1914, at the farm of Mr. J. P. Mayhew, Sciola, Iowa. All Guernsey breeders of the state and surrounding states, and all who are interested in Guernsey cattle, are invited to be present and enjoy the day with us. F. L. KERR, Sec'y—Treas.

Knollwood Farm, Lake Forrest, Ill.

Granger Farwell, Owner

KNOLLWOOD Farm is located on a beautiful 160 acre tract of land three miles north west of Lake Forest, Ill. When Mr. Farwell bought the place nine years ago it had been worn out by continual cropping, and in order to increase the fertility, eight head of grade Guernsey cows and a pure bred bull, Golden Morning V 8445, were purchased from Mr. Chas. L. Hill of Rosendale. Wis. Five of the original eight cows are still on the place and the bull was sold about a year ago, having outlived his period of usefulness.



A little later a few pure bred heifers were added, and seven years ago the bull, Malcolm of Knoolwood 11607, was born, being purchased in dam from G. B. Tallman, of Fayetteville, N. Y. Malcolm of Knollwood dropped June 2, 1906, was sired by the notable bull, Malcolm of Maplehurst 5626 A. R. 31, with eleven daughters in the Advanced Register. He, in turn, was out of Elite of Maplehurst 8452 A. R. 18, one of the early cows to make the Advanced Register, her record being 9197.35 pounds of milk and 472.06 pounds of butter fat. She has also one A. R. son and two A. R. daughters to her credit.

Malcolm of Knollwood's dam was Zelma 13051, A. R. 31 with a record of 6068.20 pounds of milk and 340.34 pounds fat made at one year and nine months of age.

He is getting some fine young stock and is assisted by Golden Walter of Knollwood 16830, a son of the first herd bull used on the place and out of an imported cow.

At first the milk was taken to the creamery, but when it was found that it tested five percent, and had gained a reputation among Mr. Farwell's friends, a route of nine customers in Lake Forest was started, the milk being delivered in pails. The following spring there was a call for more milk and twelve more cows were added to the herd, and an up to date bottling plant and separator room built.

From that time on the business increased steadily from year to year, and is still growing. At the present time, the night milk from the 62 milch cows is separated, and the mornings milk bottled. Around 225 quarts of whole milk are sold daily in Lake Forest and Lake Bluff for which is received twelve cents a quart while other milk sells for eight. Eighty pint bottles of 45% cream are sold daily and the record price of $1.20 a quart is received.

This milk is produced in practical, up to date, sanitary stables, and though it is not certified, the bacterial examinations that have been made show a count within the requirements of the Chicago milk commission. Eight men are employed on the farm, two in the bottling room, two in the barns, two on the milk wagons and three in field. The work is arranged so there are eight milkers for the 62 cows and as soon as three cans are filled, they are conveyed by trolley to the dairy building where the milk is separated or cooled and bottled immediately as the case may be.

Mr. Sitz, the superintendent, says, "When you get a customer for Guernsey milk you can't get rid of him, even if he is poor pay.

"Many of the customers ask if the color is artificial.

"During the summer season we are constantly getting calls for baby's milk, which shows that the doctors around Chicago are recommending Knollwood milk for infants."

Knollwood is an excellent example of what may be done with a Guernsey sire to improve a herd and the high market value of the products of the Guernsey.

Guernsey Grade, Venus, with Good Record

The Grade Guernsey, Venus, (picture on preceding page) is a three-quarters blood Guernsey, showing traces of Durham and came from the herd of the late Jesse Spaulding. Her breeding is not known, but the herd bulls were Duke, Ajax and Salem King, and probably Venus was by one of them. This cow is about twelve years old, was purchased in 1906, and her milk record is as follows: 1907, 6910 lbs.; 1908, 6363 lbs.; 1909, 5501 lbs.; 1910, 6955 lbs.; 1911, 6159 lbs.; 1912, 6393 lbs.

Mr. Farwell states his grades average about 15-16 pure and are very good animals. Their average in milk is fully up to the pure breds. Their butter fat test, however, is on the average lower, the grades running about 4.5, where the pure breds average 5.5.

Knollwood Farm is aiming to create by purchase and breeding an unusually high class herd of Grade Guernesys, and no doubt as time goes on, they will be well heard of.—H.

An Advocate of Grade Testing

The secretary of the Rusk County Breeders' Association, Wisconsin, writes us, giving reasons why grades should be entered for records. Few have taken advantage of and many more are evidently unaware of the fact that the Club has made provision for the testing of grade Guernseys. The rules permit of records being made under practically the same conditions as for registered stock, with no expense for entry fee.

The Wisconsin breeder sends two postal photos of his herd bull and stable containing grades. "Five of the cows in the picture sent are by the same sire, half sisters. They demonstrate clearly the prepotency of the Guernsey bull. Everyone of them has produced far above the requirements of the Advanced Register for registered stock. Like many other bulls, he had to be disposed of to prevent inbreeding, and while his get was there for anyone to look at, no one cared about him so long as he had no official record, and so he was sold for about one fifth of his real value.

"I want to call special attention to our present bull Miltonious 11640. A glance at him will convince anyone, if there is any indication in his makeup and general appearance, that this bull ought to get producers, and he has done so. He is now nearly eight years old and has to my knowledge twenty-three heifers, but only one of them is registered, and that one is but eight months old, so it will be seen that this grand bull has no show to bring himself to the public eye.

A record has been kept of four of his daughters with their first calf and from common, or what might be called scrub cows. Their records are as follows:

No. 1—5771.5 lbs.	milk—	288.63 lbs.	butter-fat.		
No. 2—5736.3 "	"	284.34 "	"		
No. 3—5882.7 "	"	265.80 "	"		
No. 4—5604.1 "	"	270.70 ""	"		

This last record is for ten and one half months only, and therefore, has six weeks to run yet. These heifers are two years of age and again give proof of the prepotency of the Guernsey bull, but this can be verified only by home records.

It would certainly be to the interest of Guernsey breeders to have grade tests made under the supervision of an official tester. Such tests would create more demand for Guernsey sires to grade up herds with among those who do not know what breed to choose. It would be the means of retaining a good many grand bulls that have been led to the block and numbers of them could be well bought to head some fine herds. This bull will now have an opportunity to get registered daughters, but it will be four years before an official record can be finished. I hope that Guernsey breeders will see to it that a test is carried on for the grades."

J. P., Eau Claire, Wis.

Editor Guernsey Breeders' Journal:

The following series of Guernsey meetings have been arranged at which Secretary W. H. Caldwell is to be the guest of honor and the principal speaker.

Summer meeting of the Southwestern Wisconsin Guernsey Breeders' Association to be held June 16, 1914, at the farm of Cary Dennis, seven miles northwest of Platteville, Wis. At this meeting there will be a judging contest for boys under sixteen years old and a prize essay contest for girls under sixteen years old on the subject, "The Dairy Cow." Limit of 500 words.

June 17, there will be a meeting of the Western Guernsey Breeders' Association at the farm of Edward Walter, Walworth, Wis. Beside the address of Mr. Caldwell, Prof. C. P. Norgord, Madison, Wis., the new Superintendent for Farmers' Institutes for Wisconsin, will speak on the topic, "Dairying in Relation to Soil Fertility and Crop Production."

June 18, the annual summer meeting of the Waukesha County Guernsey Breeders' Association will be held at the farm of Edward Gerritts, Waukesha, Wis. The summer meetings of this Association are always well attended and very successful. Other counties will unite in this meeting.

June 19, there will be a meeting of the Western Guernsey Breeders' Association at the High School Park, West Salem, Wis. Secretary Caldwell will speak on "The Future of the Guernsey," and Prof. Norgord on "Alfalfa; the Clovers in Relation to Dairying." The West Salem breeders, Ray Lewis, Adolph Nuttleman, Elmer Samuels, Alfred Stubbs, C. D. Griswold and H. W. Griswold, will entertain at lunch all that will come, and Mr. Griswold writes me they expect 800 to 1000 people.

June 23, the Fond du Lac County Guernsey Breeders' Association will meet at Sarnia Farm, Rosendale, Wis., and extended notice of this meeting will be found on Sarnia Farm advertising page in this issue.

June 24, the Portage and Waupaca County Association will hold a monster picnic in the Academy Grove, Scandinavia, Wis., and their Secretary, Mr. Larson, promises a crowd of 800 to 1000 people. I attended the annual picnic of this Association last summer and it was the best attended and most satisfactory meeting of its kind I have ever attended. Two or three other County Associations will unite in this meeting.

June 25, the Eau Claire County Association will meet at Tristram Farm, W. K. Coffin, Prop., Eau Claire, Wis. It is expected several County Associations will unite in making this meeting a success. That section of Wisconsin is going into Guernsey very rapidly.

June 26, the Northern Minnesota and Wisconsin will meet at Jean DuLuth Farms, Duluth, Minn. There is to be a special meeting of the Minnesota Live Stock Breeders' Association at Duluth, June 25, and a big time is promised for both days.

These eight meetings are expected to greatly add to the Guernsey interest in the upper Mississippi Valley. It is to be hoped that every Guernsey breeder in this territory will attend one or more of these meetings.

Charles L. Hill, Sec. W. G. B. Asso.

Manor Farm Guernsey Sale

THE annual sale of Guernsey Cattle by Frederick Phillips held at his Manor Farm, Villa Nova, Pa., May 14, brought together some 300 lovers of this breed.

The day was all that could be desired. Visitors were met at the trains by automobiles and barges and conveyed to the farm, where arrangements had been made for their convenience.

As in the past the management of the sale was conducted by Mr. L. F. Herrick, in his usual careful manner. Mr. George A. Bain wielded the hammer as on previous occasions, which added much to the success of the sale.

The usual attractive catalogue had been distributed previous to the sale from which the prospective buyer could get the breeding of each animal offered for sale.

Considering the fact that the animals had but recently arrived at Manor Farm, they were in excellent condition. The animals were struck off in quick order and good prices were obtained, the average being somewhat higher than the sale of last year. Sixty-two head sold for $21,130. an average of $340.80.

Sailor Boy, the bull who in 1912 was awarded the Cup presented by His Majesty King George V., for the best bull on the Island, went for $1700, while Imp. Raymond's Daisy of Frie Baton 50408, topped the sale for cows at $1250. The heifer, Imp. Darling's Victory 50413, brought $875. She was a large, strong heifer for her age, with fine rich color and a great deal of quality.

Imp. Beauty of Frie Baton50435, which went to J. P. Crozier for $750, (cut on Title Page) represented all that is desirable in the Guernsey and has the markings of a remarkable cow. She is a daughter of Raymond of La Croix 2692 P. S., and carries blood from such great sires as Imp. Raymond of the Preel, Governor of the Chene, Imp. Masher's Sequel and others.

Imp. May King's Polly of the Frie Baton 50418, was sold to the same party for $700. This heifer has a beautiful fine head, is of rich color and altogether was one of the prettiest things in the sale.

Following is a list of animals sold, and the buyers of same:

Bulls.

Imp. Sailor Boy 28600, John P. Crozier, Uplands, Pa. $1700.00
Rockingham's May Lad 28311, F. B. Rice, Peterborough, N. H. 150.00
Billy Lieber of the Manor 28369, H. J. Kirby, Providence, R. I. 85.00

Bull Calves.

Golden Lad of the Manor 28312, S. Morrill Weeks, Philadelphia, Pa. 70.00
Bull Calf, F. B. Rice, Peterborough, N. H. 25.00
Bull Calf, Glen Gable Farms, Wyebrook, Pa. 35.00

Cows.

Imp. Billy's France's Queen Viola 27565, Walter P. Bliss, New York City. 550.00
Imp. Primrose II of the Houguette 50404, E. W. Oglebay, Elm Grove, W. Va. 320.00
Imp. Lily du Preel XIV 50403, F. B. Rice, Peterborough, N. H. 475.00
Imp. Toulouse Maid XI 50410, F. B. Rice, Peterborough, N. H. 435.00
Imp. Violette of the Isle 50405, F. Lothrop Ames, North Easton, Mass. 550.00
Imp. Queen Christine 50400, J. G. Sherman, Greenwich, N. Y. 525.00
Imp. Nellie of the Mont Marche 50407, J. G. Sherman, Greenwich, N. Y. 540.00
Imp. Miss Hamon 35771, F. B. Rice, Peterborough, N. H. 260.00
Imp. Raymond's Daisy of Frie Baton 50408, J. P. Crozier, Uplands, Mass. 1250.00
Imp. Bijou II of Le Marais 50409, S. M. Weeks, Philadelphia, Pa. 225.00
Imp. Buttercup of Plaisance 50401, A. L. Lincoln, Hingham, Mass. 325.00
Imp. Tardivel's Polly of the Rondiaux 50414, C. H. Jones, Wellesley Farms, Mass. 425.00
Imp. Autumn Beauty of the Isle 50402, J. G. Sherman, Greenwich, N. Y. 450.00
Imp. Bella of La Tablette 50406, A. L. Lincoln, Hingham, Mass. 280.00

Heifers.

Imp. Blue Bell of Frie Baton 50438, Wm. S. Dunlap, Walnut Bottom, Pa. 300.00
Imp. Governor's Beauty of Clairmont 50442, Brookmead Farm, Devon, Pa. 180.00
Imp. Mimosa II of Meadow Farm 50412, Billy B. Van, Sunapee, N. H. 305.00
Imp. May II de la Seigneurie 50437, Chas. J. Jones, Wellesley Farms, Mass. 175.00
Imp. Miss Mota of St. Saviour's 50429, John Dove, Litchfield, Conn. 230.00
Imp. Cream of the Frie Baton 50434, Chas. H. Jones, Wellesley Farms, Mass. 200.00
Imp. Deanie's Cloth of Gold 50441, A. A. Thompson, Uniontown, Pa. 305.00
Imp. Nelly of the Villiaze III 50411, Isaac H. Clothier, Jr., Radnor, Pa. 450.00
Imp. Lively II of the Frie Baton 50445, Chas. H. Jones, Wellesley Farms, Mass. 200.00
Imp. Primrose of Noirmont III 50436, Chas. H. Jones, Wellesley Farms, Mass. 265.00
Imp. Buttercup of Frie Baton 50449, J. G. Webb, Clinton Corners, N. Y. 175.00
Imp. Banana of the Isle 50417, Dr. Norton Downs, Three Tuns, Pa. 325.00
Imp. Lady Gazelle VII 50415, John Dove, Litchfield, Conn. 410.00
Imp. Dolly of Les Heches II 50446, G. B. Tallman, West Grove, Pa. 185.00
Imp. Fairy Duchess II of Frie Baton 50447, J. C. Fretz, Perkasie, Pa. 210.00
Imp. Primrose of the Frie Baton 50444, Joseph Larocque, Far Hills, N. J. 215.00
Imp. Flora of Vrangue Manor 50428, A. I. Stubbs, West Salem, Wis. 225.00
Imp. May King's Polly of the Frie Baton 50418, John P. Crozier, Uplands, Pa. 700.00
Imp. Colima of the Paysans 50425, Clover Ridge Farm, Peterborough, N. H. 190.00
Imp. Shop Girl of the Isle 50416, B. P. Craig, Glen Spey, N. Y.
Imp. Rosette VI de la Vieille Rue 50423, Joseph Larocque, Far Hills, N. J. 320.00
Imp. Frances IV of La Ruette 50426, J. I. France, Port Deposit, Md. 210.00

Imp. Beauty II of La Ruette 50431, A. L. Lincoln, Hingham, Mass.	225.00
Imp. Lady Rose of the Rouvets 50421, F. B. Rice, Peterborough, N. H.	285.00
Imp. Violette of the Isle III 50439, A. A Thompson, Uniontown, Pa.	210.00
Imp. Violette of the Isle II 50419, J. I. France, Port Deposit, Md.	365.00
Imp. Fanny IV of the Echelle 50432, Chas. H. Jones, Wellesley Farms, Mass.	290.00
Imp. Ena of the Fauconnaires 50427, G. B. Tallman, West Grove, Pa.	225.00
Imp. Bessie of the Camp 50420, J. I. France, Port Deposit, Md.	325.00
Imp. Lily of the Fauconnaires 50422, Henry W. Leeds, Atlantic City, N. J.	380.00
Imp. Daisy MacCulloch III 50443, John Dove, Litchfield, Conn.	280.00
Imp. Beauty III of the Camp 50424, E. S. Harmer, Moorestown, N. J.	350.00
Imp. Raymond's Bijou of the Isle 50440, A. L. Lincoln, Hingham, Mass.	255.00
Imp. Darling's Victory 50413, J. P. Crozier, Uplands, Pa.	875.00
Imp. Beauty of Frie Baton 50435, J. P. Crozier, Uplands,Pa.	750.00
Imp. Beauty II of Frie Baton 50448, A. A. Thompson, Uniontown, Pa.	240.00
Poundstock of the Manor 49819, John Dove, Litchfield, Conn.	235.00
Imp. Fanny IV of the Jaonnets 50433, John Tyler, Salem, N. J.	295.00

Vermont Guernsey Breeders' Association

IN response to a call from Mr. H. T. Johnson of Bradford, twelve Guernsey breeders met in the parlors of the Pavilion Hotel at Montpelier, to organize a State Breeders' Association. Thirty breeders had written Mr. Johnson heartily endorsing the movement and expressing a wish to join.

Though Vermont is one of the last of the New England States to organize a state association, it is safe to assert that she will take a prominent position in effective work. Strong men and movements have had their birth in the Green Mountain State. It was here that Senator Justin Morrill conceived the idea of our great system of State Agricultural Colleges and introduced in Congress his famous bill providing for their establishment. This measure has produced results beyond

Deanie's Rose King 17773
Owned by Edward R. Andrews, Putney, Vt.

anyone's computation. These institutions are rapidly coming into their own proper place as educational centers. Montpelier is the home of Admiral Dewey, the foremost figure in the Spanish-American war. It was Capt. Charlie Clark, as they speak of him in his home state, who took the U. S. battleship Oregon around the world. Now it is Rear-Admiral Mayo of iron will and courage who told Mexico that the American flag must and shall be respected. Of such calibre are the Vermonters and the success of the association launched at Montpelier, and the prominent part it will take in Guernsey development is assured from the start.

Mountain states breed a strong and conquering kind of men. The live stock of such sections is notoriously hardy and much sought after. The Morgan horse, combining more of the equine virtues and less vices and faults than any other, originated in Vermont; so did the Merino Sheep. It seems then that with such precedents, the new organization will see to it that Guernsey cattle in Vermont shall be as well known throughout the country as Vermont turkeys and maple sugar, both synonomous today with the highest quality.

That Guernseys are already in demand is shown by the experience of one of the breeders present. This man put an ad in one of the papers stating that he had a bull to sell, and in the morning a man was on his doorstep ready to purchase. Another breeder put a little ad in Hoard's Dairyman, and the day the paper was out, while away from home he met a man and sold the bull. Upon reaching home at night he found that a man had been there, bought the bull, and paid his wife. A telegram came from Kansas "Hold bull for letter." Seven inquiries by mail were handed to another near neighbor who had a bull to sell. This man wrote the seven men on Saturday, describing his bull and naming a price. Monday morning he had seven letters containing seven checks for his one bull. It was an awkward position to be placed in. Another breeder told of a man bringing his grade Ayrshire cow twelve miles directly, by a registered Ayrshire bull, to breed to his Guernsey. There is evidently a fire in Vermont already started and spreading. In the Champlain Valley, it was reported that six Guernsey bulls have been bought by men who as yet do not own any registered females. Such were the experiences given by those in attendance, few of whom knew the other men present.

A talk from the office representative was then given, outlining the work of the office at Peterborough, and the help such local organizations could give in advancing Guernsey interests He was asked to act as temporary chairman and plans for organization were at once under way. Officers were elected and the executive committee invited the representative to join them and help outline a suitable constitution and by-laws.

This was later presented to and adopted unanimously by those present. The following officers were elected:

President, H. T. Johnson; Vice President, E. C. Tenney; Secretary and Treasurer, Mark H. Moody; Executive Committee, Edward R. Andrews (2 years), Irving W. Bates (1 yr. J. P. Ramsey (4 yrs.), Dr. George E. Chamberlain (3 yrs.)

By lot, the numbers were then chosen to serve for four, three, two and one years respectively, as numbered above. A list of men in the state who own one or more Guernseys will be furnished from the Home office and an active campaign for members begun in the state.

During the meeting, State Commissioner of Agriculture, E. S. Brigham, called and expressed his interest in the enterprise and believed that it would be a power for good in the state.

The meeting then adjourned and a little time was spent in a social, get-together acquaintance.

ADVANCED REGISTER RECORDS COMPLETED AND APPROVED TO MAY 15, 1914.

Imp. Belle of the Vrangue 2754, A. R. 2652, owned by H. C. Everett, Barnstable, Mass. Record:—7719.45 lbs. milk; 407.33 lbs. B. F. 6 yrs. old.

Imp. Rose II of the Echelle 25572, A. R. 2653, owned by Mortimer L. Schiff, Long Island, N. Y. Record:—10059.60 lbs. milk; 473.51 lbs. F. B. 5 yrs. 4 mos. old.

Imp. Levonia's Beauty HI 33389, A. R. 2654, owned by Oglebay, Elm Grove, W. Va. Record:—11222.80 lbs. milk; 446.59 lbs. B. F. 4 yrs. 8 mos. old.

Queen Rhea 30985, A. R. 2655, owned by J. L. Hope, Madison, N. J. Record:—9385.25 lbs. milk; 430.35 lbs. B. F. 3 yrs. 4 mos. old.

Miss Livingston 29628, A. R. 2656, owned by Charles Wilkins, Platteville, Wis. Record:—7983.90 lbs. milk; 384.05 lbs. B. F. 3 yrs. 7 mos. old.

Thirty Thousand One Hundred Seventeen 30117, A. R. 2657, owned by Est. George Mixter, Hardwick, Mass. Record:—11031.40 lbs. milk; 558.28 lbs. B. F. 7 yrs. 10 mos. old.

Mambrino's Lura 31577, A. R. 2658, owned by Fruit Bros. Waukesha, Wis. Record:—12006.40 lbs. milk; 579.97 lbs. B. F. 3 yrs. 2 mos. old.

Imp. Lady Gree VI 40065, A. R. 2659, owned by Jean DuLuth Co., Duluth, Minn. Record:—10715.20 lbs. milk; 560.90 lbs. B. F. 5 yrs. old.

Bonnie's Pride 26980, A. R. 2660, owned by Friend's Asylum for the Insane, Philadelphia, Pa. Record:—8909.30 lbs. milk; 343.42 lbs. B. F. 5 yrs. old.

Glenwood's Lassie 33043, A. R. 2661, owned by Henry Hall, Philadelphia, Pa. Record:—10267.80 lbs. milk; 437.57 lbs. B. F. 2 yrs. 8 mos. old.

Princeling's Ro 34024, A. R. 2662, owned by B. L. Rundell, Hammond, Wis. Record:—6645.20 lbs. milk; 275.30 lbs. B. F. 2 yrs. 1 mo. old.

Princeling's Lily 34025, A. R. 2663, owned by B. L. Rundell, Hammond Wis. Record:—8970.00 lbs. milk; 424.90 lbs. B. F. 2 yrs. old.

Fernwood's Ro 29482, A. R. 2664, owned by B. L. Rundell, Hammond, Wis. Record:—7102.40 lbs. milk; 335.82 lbs. B. F. 4 yrs. 2 mos. old.

Junio 31231, A. R. 2665, owned by B. L. Rundell, Hammond, Wis. Record:—5666.50 lbs. milk; 308.37 lbs. B. F. 3 yrs. 1 mos. old.

Siecelea Pearl 34379, A. R. 2666, owned by Charles Wilkins, Platteville, Wis. Record:—8697.60 lbs. milk; 442.20 B. F. 2 yrs. 2 mos. old.

Larella 17947, A. R. 2667, owned by Miss M. M. Vaux, Bryn Mawr, Pa. Record:—7560.70 lbs. milk; 382.78 lbs. B. F. 8 yrs. 4 mos. old.

Thelma R 27738, A. R. 2668, owned by Miss M. M. Vaux, Bryn Mawr, Pa. Record:— 9842.70 lbs. milk; 492.76 B. F. 7 yr. 8 mos. old.

Louise of Locust Hill 29875, A. R. 2669, owned by Miss M. M. Vaux, Bryn Mawr, Pa. Record:—7143.50 lbs. milk; 381.00 lbs. B. F. 4 yrs. 5 mos. old.

Viscountess of Harriton 24923, A. R. 2670, owned by Miss M. M. Vaux, Bryn Mawr, Pa. Record:—8799.90 lbs. milk; 414.58 lbs. B. F. 3 yrs. 9 mos. old.

Diana of Harriton 27484, A. R. 2671, owned by Miss M. M. Vaux, Bryn Mawr, Pa. Record:—8779.00 lbs. milk; 358.07 lbs. B. F. 3 yrs. 8 mos. old.

Choice's Miranda of Harriton 33844, A. R. 2672, owned by Miss M. M. Vaux, Bryn Mawr, Pa. Record:—8763.60 lbs. milk; 452.60 lbs. B. F. 2 yrs. 10 mos. old.

Louise of Middlebrook 27993, A. R. 2673, owned by C. H. Zehnder, Allenhurst, N. J. Record:—8888.16 lbs. milk; 469.99 lbs. B. F. 4 yrs. 2 mos. old.

King of Chilmark 20798.

King of Chilmark, sired by Archer of Chilmark 13376, out of Imp. Antoinette's Queen's Prize VII, one of the famous A. R. dams of the breed, is a double grandson of Governor of the Chene, and is a worthy representative of that famous family. Mr. R. H. L. Chichester, of Fredericksburg, Va., owner of this animal writes he is a bull of exceptional quality and his daughters, the first of which came last fall, are of beautiful type and give promise of dairy quality.

We also show picture of Wallie of Glencairne 35318, taken just after she had dropped her first calf, as a two-year-old. Since September 7, she has given over 6000 pounds of milk. Ensilage, Union Grains and cut corn fodder have been her feed rations.

New Guernsey Association.

Junean Co. now has a Guernsey Cattle club knows as the Junean Co. Guernsey Club with the following officers:

Pres., C. D. Curtis, New Lisbon, Wis.; Vice Pres., T. J. Wright, Manston, Wis., R. No. 1; Secy, Treas., F. C. Clow, New Lisbon, Wis.; Board of Directors, A. E. Wilcox, Manston District, T. J. Wright, Lyndiana District, L. J. Quamme, Elroy District, Will Lauden, Hustler District, Geo. Alcock, New Lisbon District.

Crab Tree Farm

Mrs. Scott Durand, Owner

NINE years ago Mrs. Scott Durand started her dairy at Crab Tree Farm, thirty miles north of Chicago on the C. & N. W. railroad.

The farm comprises 270 acres of rich soil, 160 acres being under cultivation, 50 acres in fine pasture and the balance in virgin woods. This property has a frontage of over half a mile on Lake Michigan and a wooded bluff of from 80 to 100 feet high with deep beach of sand and gravel. It is conceded to be one of the most beautiful pieces of property in Illinois.

In order to produce a better quality of milk than was then being produced anywhere around Chicago, the farm was stocked with Jerseys, but due to udder troubles with the cows and the great care required to raise the calves, grade Guernseys and Holsteins were brought in, and the production of certified milk commenced. Two years ago, however, the place burned and upon this farm there is now being erected a group of dairy buildings that are not surpassed in this country or abroad. Modern construction is found throughout. Hollow tile walls, allowing flues for a ventilating system, steel frames and concrete slab roofs, make the entire quota of buildings absolutely fire proof. With the finest finish of concrete both inside and out and an arrangement of light, steam, water, sewerage and refrigeration that is unexcelled, the plant is as perfect as can be made to produce a pure and wholesome milk.

With 92 acres of beautiful alfalfa of three cuttings a year, rich corn fields kept up with manure, rock phosphate and lime, it is now the aim and purpose of the management to possess a pure bred Guernsey herd that can not be rivalled anywhere.

After seven years of experience with cattle of all the dairy breeds the Guernsey cow has been chosen since her blood had given the best satisfaction all around in the mixed herd; and after two years experience with the pure bred Guernseys alone, Mrs. Durand's enthusiasm for the breed has not waned.

As a beginning, forty-two head of carefully selected animals from the Islands of Guernsey and Alderney were imported. Mr. and Mrs. Durand spent some time on the Islands, and were convinced that no strain equalled that of the old Governor of the Chene to head the new Crab Tree herd. They were most fortunate in obtaining from his owner the young bull Royal George of the Isle 20305, dropped May 7, 1910, sired by the old Governor and out of Dairy Maid des Islets VI 3811 P. S., one of the finest cows the Island possesses. A bull calf, son of Royal George, recently sold for $200 at five months of age and within the last four months, Mrs. Durand has sold eleven bulls for a total of $1875, showing that the demand for Guernsey bulls to grade up dairy herds is not on the decline.

Young heifers of fine individuality from such well known strains as the Sequels from France's Masher 2d, Princess Jewel and Osseo from May Rose, Raymond IV, Lady Alderney and the famous New Grove Queen of the Island of Guernsey, and from Alderney heifers from Masher 63 F. S., Admiral Togo, Nelson 2d, Chieftain 2d, Freedom and Prince 58, all King Cup Bulls with one descended from the original Dairymaid and several from the celebrated cow Polly 2d 343, were secured.

From the development of this foundation here, there is now being produced 250 quarts of milk per day, for which is received about $25. The evenings milk testing on the average 5.5% is bottled in 1-3 quart glass jars modeled after the Guernsey milk can and distributed by the Borden's Dairy Co., among the hotels, tea rooms, railroads and clubs of Chicago for a drinking milk. The mornings milk is separated and a 22 to 25% cream sold to a fancy ice cream market at advanced prices.

Mrs. Durand says, "There is no denying that the middle west states are bound to be one of the foremost butter and cheese districts of the world, and it behooves the farmers to become good dairy farmers and put upon their farms a breed of cattle of strong vigorous constitution, producing a milk rich in butter fat and yellow in color.

"There is no breed today better suited for this purpose than the Guernsey breed. A pure bred Guernsey sire with grade Guernseys is a good start. Then add, as one can afford, a few pure bred females and secure a herd that will be a credit not only to the farmer himself, but to the country at large.

Nine Daughters of Bob Rilma 16141, Granddaughters of May Rilma.

Owned by Wilcox & Stubbs, Des Moines, Iowa.

Cow Testing Association as a Means of Testing the Merits of Dairy Bulls

Notes of an Address by J. R. Wheeler Before Annual Convention Wisconsin Live Stock Breeders' Association.

Subject is so inter-related with other phases of dairy farming that it is almost impossible to stick to the text.

Some knowledge of the dairy bull has come through desultory reading but most of my ideas come from talks with farmers most of whom are members of the Columbus Dairy Improvement Association. It is safe to say that the ideas I have gained are those that have been gained by the members of the Testing Association and if I bring you anything of value you can thank the Cow Testing Association for it.

We are told that the dairy bull is the most important animal to build up the herd; that he must be not only pure bred but proven; must have not only dairy ancestors but must be a good individual and able to beget real dairy cows. A real dairy cow is one that gives large and profitable quantities of milk. She is one that has been bred to produce milk and not meat.

It is easy enough to get the pedigree of a dairy bull and if an old bull of long service is purchased from an owner whose business it is to breed pure bred stock, the record of the bull as a sire of productive cows can also be had, but if a young bull is purchased, his worth as an individual must be proven, and knowledge can be obtained only by testing his progeny. And so we find that the tester is testing not only the cows but also the bulls.

Go into any community where there is no cow testing association or where the value of testing each individual cow is unknown and you will find the arguments advanced that a bull is too heavy; too old, hence ugly; too black. Whereas the real value, the ability to reproduce milkers is overlooked.

An individual farmer attempting to breed up his herd must buy and sell a bull about every two years in order to avoid inbreeding.

He is unable to keep the bull long enough to prove his worth. Bull goes to the block.

Cow Testing Association solves the problem. Discuss all the merits of the association. Proves cows as individuals. Proves bulls as individuals. Makes a market for both bulls and heifers because of record of results.

Encourages the organization of Community Breeders' Associations.

Together these associations will make the section renowned for pure bred and high grade cattle.

The state is already renowned and new sections get the benefit of the advertisement.

Demand world wide market unlimited.

Community effort is the effective method.

Work takes on new interest when everyone is working for some definite end.

Benefits of the college can not be overestimated. Calls for co-operation of bankers, other business men and farmers. Organization makes it possible for the men of the college to reach the farmers and their work becomes effective.

The Guernsey Barn Dance

Said Mr. Murphy one fine morn
To Spotswood Daisy Pearl.
"Let us have a celebration,
Or a Guernsey Social Whirl.

We will send out invitations,
To all in the smart set,
And we'll have the finest Barn Dance,
That was ever known, you bet!"

So Spotswood Daisy straightway went
To tell other cows the news.
And a cow Modiste was hired
To make gowns of many hues.

And when down to Langwater
The Jolly news was sent
The cows were greatly flustered,
And Dolly Dimple went

To a very chic Cow Clothing Store,
And there with thoughtful brow
She selected gowns that would gladden
The heart of any cow.

Likewise down at Haddonfield
Great plans were being made
To attend this social function
In finest silks arrayed.

While way out in Wisconsin,
Sarnia Lads and Lassies gay,
Were practicing the Tango,
To be ready for that day.

Said the Holsteins to the Jerseys
When they heard of this affair,
"Of all the foolish notions,
Its the silliest, I declare."

"Let them scoff," laughed all the Guernseys,
"They're just jealous, can't you see,
And besides, they'd all be Wallflowers,
Just as sure, as sure could be."

And at last through weeks of planning,
The festal day was here,
And from all parts of the compass,
Flocked the Guernseys far and near.

Never was there such rejoicing,
Never such a gladsome crowd,
And for Spotswood Daisy Pearl, the hostess,
Three cheers were given long and loud.

Then she in her excitement
Stepped on Dolly Dimple's train,
By the aid of sweet May Rilma,
All was made serene again.

And when the dance had started,
All looked interested when,
Hayes Cherub did the Tango,
With fair Missy of the Glen.

Finally they had danced enough,
And the joyful music ceased,
They all repaired to the dining room
To partake of a joyful feast.

Then each one bowed a reverent head,
To hear the thankful prayer
And grand old Glenwood's Mainstay
Rose to ask a blessing there.

Said he "We're all so thankful
For this very prosperous year,
And we thank the "Anna Dean Farms"
For assembling us all here.

And we have lived to see the happy day
That the Guernsey takes the lead,
And is recognised as Queen of cows,
So "Amen," they all agreed.

MARY C. DONOVAN.

Five Leading Cows in the Several Classes in the A. R. as they Appeared May 15, 1914.

A Few Changes

THE past month has brought several important changes in our Advanced Register records. The one overshadowing all others is the great record of May Rilma 22761, just completed, and which places her in the enviable position of Queen of the Dairy World.

No record has been followed with greater interest or received more careful supervision. It marks an important epoch in dairy history. How long she will be allowed to hold her laurels it is difficult to guess; that they will be eagerly sought after is very certain. Few, if any, believe that a dairy cow's capacity has been reached, and there are several very hopeful aspirants in the field for the world's record.

The most encouraging feature of this A. R. work is that while only one at a time can carry the pennant, the rank and file of dairymen are gaining a world of experience in studying these large records in the making and applying the principles in the handling of their own herds. Increasing the average yield is generally believed to be decreasing the cost of production. With each year we have a large number of records completed and with the feed rations and other data published with each, there is abundant material from which to draw conclusions.

In our list of Class Leaders this month the advent of May Rilma at the head of Class A means the withdrawal of Yeksa Sunbeam, who has long held a prominent place on our honor roll. It is with sincere regret that we have to omit her name from this list in the future. The coming year will probably see many other familiar names give way to new ones, though with increasing numbers there are more to pass and the honor is all the greater.

With a steadily increasing milk yield, there has been a slight drop in the average per cent of butter-fat. While the average milk and butter-fat yield for the Class Leaders shows a steady growth, milk seems to be gaining, with a drop of one point in butter-fat percentage, which now stands at 5.28%. For the first time the average percent for the total number of records has dropped below five. This is accounted for by the fact that while we have increased in 1914, the average milk yield over 1913 by some 300 lbs., there has been a slight decrease in average butter-fat yield. The richness of milk and especially the color, two very important characteristics of the Guernsey product, should not fail to receive careful consideration, and a high standard preserved. This yellow color of the milk, a characteristic of the Guernsey cow alone, has a distinct commercial value, which should never be lost sight of.

The Advanced Register of Guernsey Cattle

SPECIAL NOTE This list contains the latest credits and totals for the several cows entered in The Advanced Registry work so far as same has been checked up and verified at the time the list is put to press.
Any omissions or back credits given signify that either data has not been received in time, or was held up pending verification. In such instances they will appear in next list published.

SEEING
the Difference
BETWEEN THE
DE LAVAL
AND OTHER
Cream Separators

IT DOESN'T TAKE AN EXPERT knowledge of mechanics or a long working test to tell the difference between the De Laval and other cream separators.

ON THE CONTRARY, WITH A 1914 De Laval machine placed beside any other separator the difference is apparent at first sight to the man who never saw a separator before.

IF HE WILL THEN TAKE FIVE minutes to compare the separating bowl construction; the size, material and finish of the working parts, particularly those subject to wear and requiring to be occasionally taken apart and put together; the manner of oiling, and everything which enters into the design and construction of a separator as a simple durable machine, he will still further see the difference.

IF HE WILL GO A STEP FARTHER and turn the cranks of the two machines side by side for half an hour, particularly running milk or water through the bowl, he will see still more difference.

AND IF HE WILL TAKE THE TWO machines home, as every De Laval agent will be glad to have him do, and run them side by side in practical use, the De Laval one day and the other machine the next, for a couple of weeks, he will see still greater difference in everything that enters into cream separator practicability and usefulness.

THE MAN WHO TAKES EVEN the first step indicated in seeing for himself the difference between the De Laval and other cream separators doesn't put his money into any other machine one time in a thousand.

THE COMPARATIVELY FEW buyers of other separators are those who merely read printed matter claims or listen to the argument of some dealer working for a commission, and who do not think it worth while to see the difference for themselves.

THE WISE BUYER OF A CREAM separator today does see this difference when buying his first separator, while the unwise or careless one usually finds it worth while to do so when he comes to buy a second cream separator a year or two later.

EVERY DE LAVAL AGENT CONsiders it a privilege to show the difference between the De Laval and other separators, and to afford every prospective buyer the opportunity to try out and prove the difference to his own satisfaction, if on first examination he feels the slightest doubt about it.

THAT'S THE REASON WHY FOUR buyers out of five are buying De Laval Cream Separators in 1914, and why the use of De Laval machines will, before long, be nearly as universal on the farm as already is the creamery and milk plant use of power or factory separators.

UNITED STATES DEPARTMENT OF AGRICULTURE
Bureau of Animal Industry
Washington, D. C.

December 20, 1913.

Mr. Thomas F. Ryan,
Oak Ridge, Va.

Sir:—In accordance with your signed agreement with this Bureau, the regular annual retest with tuberculin was applied to your herd of cattle by Dr. C. E. Lindburg of this office upon Dec. 12 and 13. As a result of this retest your entire herd of 65 cattle was regarded as free from tuberculosis.

Very respectfully,
R. W. HICKMAN,
Chief Quarantine Division.

A BIG ARMY of UNITED STATES CREAM SEPARATOR Users

is always ready to march to the front and back our claims with the

Proof of personal experience.

U. S. "boosters" are a volunteer and not a drafted army.

Stamford, Tex., Feb. 16, 1914.

Vermont Farm Machine Co.
Chicago, Ill.

GENTLEMEN:—I received the separator all O. K. the 11th and am as well pleased with it as can be. Can't praise the U. S. too much. I wanted to try it before I sent you the money. There are several different kinds of separators in use close around me, but I have the closest skimmer and the lightest running machine in the community. People who are using other machines like mine best.

Yours truly,
NULL GARDNER.

HAS BIG FEATURES which bring to dairymen the greatest cream separator advantages in recent years, and crown the United States **the King of all.**

1—**Nickel silver, non-rusting skimming sections** are non-adhesive, and make up the only skimming device guaranteed never to rust; as easy to clean therefore as polished ivory or glass.

2—The **U. S. Mechanical Washer** (other separators are not adapted to mechanical washing) makes easy cleaning still easier and quicker.

3—The removable **Sanitary Liner** prevents milk from ever touching the cast iron of the bowl chamber.

The U. S. holds the World's Record for closest skimming

D

Best Cow Feed we Ever Fed

Thus writes the ready (W. Va.) Produce Co. A dealer in northern N. Y. says: "Every person who has a cow in town swears by Dewey's Ready Ration." A large milk producer of Vermont says: "It has increased the milk flow several cans per day." A Vermont dealer reports wonderful results by one of the farmers using this ration in not only increasing the milk flow but after three weeks it increased the weight of the animal in good healthy flesh. In the same letter the dealer says that certain other ready mixed rations, while producing a large flow of milk, seem to diminish the weight of the cows.

Dewey's Ready Ration is made for the dairyman who wants the highest quality in everything that goes to make up an ideal dairy feed. Satisfaction guaranteed. For samples and further particulars write

THE DEWEY BROS. CO.,

Box 570 **Blanchester, Ohio**

Ask for prices on 3 D (Dewey's Distillers Dried) Grains.

THERE IS NOTHING

That adds more to the appearance of the head of an animal than to have a pair of

SYMMETRICAL HORNS

If you wish to go into the show ring and WIN attention to this one point may mean the difference between success and defeat. It is unnecessary to have an ugly horn on your cattle you can train them by using a

Herrick Horn Trainer

They are now in regular use by the most successful breeders and exhibitors all over the country.

Descendants of Sheet Anchor

We have at present, on hand three thoroughbred and registered

Young Guernsey Bulls

of exceptional merit. They are rich in the blood of the famous Island bull "Sheet Anchor," and are all handsomely marked and of distinct dairy type. They are tuberculin tested, and we can recrecommend them without hesitation. For prices and particulars. address

Guernsey Breeders' Conference

Held at Hotel Imperial, New York, May 12, 1914

Mr. Van Alstyne in the Chair.

Chairman Van Alstyne: Ladies and gentlemen, it is understood by everyone that this evening meeting for several years past has been under the auspices of the New York Guernsey Breeders' Association, assisted and fostered, of course, by the parent association, and the good offices of Secretary Caldwell. I am very sure that all of you who have been in attendance at these meetings in the past years will bear testimony that they have been full of meat, and of interest to the dairy breeders, the Guernsey breeders particularly. Those who have been instrumental in getting up the program and selecting the speakers have certainly been very wise, very fortunate, I can say that with good grace, that to my predecessor, Dr. Russell, and Secretary Caldwell, belong all the credit. I am very sure, as you have looked over the program of good things, some of which are stated and some of which are also in the pantry, that will be brought out later, you will have realized that they have certainly lived up to their record this year in the selections that have been made.

You will also be glad to know that Mr. Cassatt, who was to have spoken this afternoon at the session particularly of the New York Breeders, has been held over till to-night so that we might have the benefit. But, before we hear from him, there is a gentleman who is known to all Guernsey breeders, who is with us, and we would be very glad to hear him, and to have him make an announcement which is in his mind. Mr. W. W. Marsh. (Applause.)

Mr. Marsh: Gentlemen, when it was settled that Chicago was to be home of the National Dairy Show, and that many of us would use the Saddle and Sirloin Club as a place where we will meet each other as years pass, as we meet at the show, it was decided that we would have, if possible, a room set apart in which we would place the portraits of the men who had done great things in the dairy world. The American Guernsey Cattle Club, first in many things, certainly first in this, has, in my mind, started and marked an epoch in the recognition of our own people, and at the next National Dairy Show, we propose to place this portrait of Governor Hoard (Applause) in the room set aside for those men who have done great things in the dairy world.

I don't know as I have anything more to say unless it is just this. It is proper recognition that those men who have worked in the dairy world, and there is no man, never has been any man, identified with any breed of cattle, no man certainly identified with the Guernsey breed of cattle who deserves more at our hands than the dear old Governor. And I bespeak for a proper recognition for that day when we will unveil that portrait. Your committee, composed of Mr. Scoville and Mr. Caldwell, and myself, have done what work we could to secure that portrait, one that would be worthy of the Governor, and I think, from the recommendations which the picture has had, we were successful.

The only thing that I can add is that at some time, and it will be duly announced, during the period of the next National Dairy show there will be a celebration of the entire dairy world, but it will be especially a day when Guernseymen will celebrate; because on that day dedicated will be this room, which, for all time, will be used as a place to hang the portraits of the people who have done things in the dairy world; and the first one to be hung there will be that of Governor Hoard. On that day we hope that you will all be there, not only those here tonight, but as many as you can bring, and as many as recognize the day as one worthy of celebration. (Applause.)

Mr. Scoville: Mr. President, may I suggest on this occasion, it might be appropriate for the Secretary of this Association to send to Governor Hoard a telegram to the effect that the showing of his portrait was greeted with enthusiasm, expressing the love which we all feel for this grand old man? I would move you that the Secretary be directed to draft and send the Governor, at Atkinson, Wisconsin, a telegram, expressing our action tonight.

The motion was duly seconded and unanimously carried by a rising vote.

Chairman Van Alstyne: Mr. Secretary, you will please so notify the Governor.

It struck me as I came into the room this evening and saw the portrait on the wall that it was a very happy thought of the committee to have brought it here before putting it in its permanent place at Chicago, and I am sure I express your

Chesterbrook Farm, the home of May Rilma

sentiments when I say that the Committee have our thanks for their thoughtful consideration.

As I said a moment ago, this afternoon the New York Guernsey Breeders had expected to have with them Captain E. B. Cassatt, the owner of the cow that has made all Guernsey people step a little higher and feel a little prouder, and all the owners of all other breeds of cattle sit up and take notice. We had expected to have him with us this afternoon, to tell us something about the performance of that great cow, but we have reserved this treat for this time, and I have the pleasure of presenting Captain Cassatt to you this evening. (Applause.)

Captain Cassatt: Mr. Chairman, ladies and gentlemen, I have prepared for your use here a statement of facts which may be interesting. If you desire to have one, I would like to have them handed around. It is in reference to May Rilma.

Also, with a view to giving you an idea of the coloring of this great cow, I have had some autochrome pictures. It is a rather remarkable process of photography, which I will be very glad to have you look over. You have got to look into a mirror, and you have to have it in the light.

Dr. Russell didn't know much about me when he asked me to make a speech. I have never made but one speech before in my life. It was at a political meeting, and I was trying to get people to vote for Mr. Wilson. When I introduced my best speaker, I described him as a freak. He was a southern gentleman, free-trader, a very rich iron master, who wanted the income tax, so I said all those nice things about him, and told him they had to listen to him, and sat down. A voice from the back part of the hall said, "What the devil is his name?" (Laughter and applause.) That was my first, and, up to this time, my last attempt at public speaking.

Before going on with this speech, if it is to be called a speech, I would like to read to you three letters which I have received from the Secretaries of the Holstein-Friesian Association, the Jersey Association, and the Ayreshire Association. Here is what we get from the Ayreshires.

Imp. Auchenbrain Brown Kate 4th, 917.60 pounds of fat, and 23,022 pounds of milk.

The next best is Lily of Willowmoor, 888.70 pounds of fat, and 22,106 pounds of milk.

Agnes Wallace of Maple Grove, 821.45 pounds of butter fat, and 17.657 pounds of milk.

The Holstein Friesian, a little more of a letter, it is not necessary to read the letter, but his best records are:

Banostine Belle DeKol, 1058.34 pounds of butter fat, and 27,404 pounds of milk.

The next one is Pontiac Clothilde DeKol 2nd, 25,318 pounds of milk, 1017.28 pounds of fat.

High Lawn Hartog De Kol 25,592.5 pounds of milk, and 998.34 pounds of fat.

I had heard that the Holsteins had a cow up their sleeve that was going to beat the Guernsey record, and I asked him the record, and he said:

"The Holstein-Freisian has twenty cows testing above 857 pounds fat in one year; but we have no cow under test that is likely to exceed the great record made by your cow, May Rilma. The Guernsey breed as well as the owner is to be congratulated on the possession of such a cow." (Applause.)

This talk or speech is going to be a little selfish. I was asked to talk about my cow, and I am going to do it. (Applause).

Here is the Jersey fellow. He sends me his best cow and a picture of her. Her name is Sophie 19th of Hood Farm. 999 pounds 2.2 ounces of fat; milk, 17,557 pounds and 12 ounces. Her average of fat was 5.678. And she had the Babcock test officially applied. Remember this figure, 138 samples of milk during the year.

The second cow was Eminent's Bess 3rd. 962 pounds, and she had 18,078.2 pounds of milk. He says: "I am unable to answer your inquiry in regard to what cow is liable to break the record of May Rilma. It is necessary to wait until completion of tests, in order to determine the relative standing of cows." Remember that figure of 138 samples of milk, separate samples of milk, 138.

I spoke of my iron master, income-taxer, free-trader, southern friend, as a freak. May Rilma is a freak. At least, I think she is a freak, because I cannot find anything in her pedigree that would lead anyone to suppose that she could do those things she has done. I have a few of the extended pedigrees that I want to read, I would read them all to you. I will pass them around if you wish to see them.

Her mother is a beast named Rilma of Paxtang. That does not mean anything to any of you.

The mother's sire was Sheet Anchor 2nd, and that doesn't mean anything to you.

Rilma's dam was Princess Bonnie of Paxtang, and as far as I can see, she was not any good. (Laughter.)

This Princess Bonnie had a grandmother that made 506 pounds of fat. That is pretty good.

There is no use talking about the Sheet Anchor blood, because you all know about it.

I think it was in 1904 we shipped 24 beautiful Guernsey cows to the butcher, because—I don't like to say the word—the State Veterinarian was coming along. I haven't said it now, have I? Then my father sent down to Mr. Hope's place at Florham Farms, and they bought 67 cows and among those was Rilma of Paxtang, and just after this cow came to our place she gave birth to a cow named Miss Rilma by Rutilant. Rutilant and Rilma Paxtang together might lead one to believe there was a good record. This Miss Rilma Rutilant, by the way, is the brother of a sister, and this brother and sister are brother and sister also to Sheet Anchor second. I am not certain about that. Miss Rilma, she gave 586.22 pounds of fat in her test, 12,186.20 pounds of milk. And that was to be expected, I should say, from the breeding of Miss Rilma.

Then we sent down to a neighbor of ours and paid $100, I think, for a two-year-old bull, his name was Mars of Woodcrest; and Mars of Woodcrest was by Mr. Dooley of Mapleton, and he was out of Charity of Mapleton. That is all I can say for him. That is every bit of it. (Laughter) That is, all I can right now. I can say a little more after a while.

Mr. Gill here would know what I mean when I say that Mars of Woodcrest's great-grandfather, Zach Taylor, was the sire of Mars of Woodcrest's great-grandmother Amita. You and I are the only ones who know what it does mean.

Unfortunately I came into the possession of the cows I have now through the death of my father. I had been soldiering for a number of years, and I hardly knew one end of a cow from another. I knew they gave milk, and I knew milk punches were made out of milk, and I didn't know anything about the advance register work except somebody said, "Why don't you do it," and I looked over my records and I found five cows, who, in milking twice a day, in nine months had made over nine thousand pounds of milk. Those five cows were daughters of old Rilma Paxtang, and two of them were by Mars of Woodcrest. Still I cannot see why they did it. So I started those five cows on the advance register, and now I think I have thirty of them. Some of them are fairly good ones. One of them is, anyhow.

I have here a little more of Mars of Woodcrest. He has fifteen daughters registered. Nine of them are in the advance register, and if you take May Rilma's own record, you will see that there are ten of them in the advance register, and they give a total of 109,966 pounds of milk, and 5,459 pounds of butter, or at an average age of four months,

eleven years—I don't think that is right, but anyhow an average of 9,413 pounds of milk, and 341 pounds of fat; that gave an average of 10,999 pounds of milk, and 525 pounds of butter fat. After I began to read those figures, I thought that Mars of Woodcrest was quite a bull, in spite of his non-illustrious ancestors.

Now, we come to May Rilma herself. She started off in April, and she was not doing very much, and they only tested her once. They did not test her at all in April. They tested her on the first of May, I believe, according to these things I have here, these sheets. And I wrote to Dr. Russell about the middle of May that I thought she was milking pretty well, and might come up pretty near the Guernsey record. And at the end of May I had to write him I was sure she would not do it.

Then again came this June record that you see, that was 1,839 pounds of milk, and 103 pounds of fat. Then I began to prick up and I thought I might get up to Daisy Pearl. I never thought of Dolly Dimple. Well, I have it mixed up. Dolly Dimple is the milk producer. Then along came my friend Marsh in November, and he got to talking about beating the Holstein. and I said, "Go on, man, you are crazy." And I didn't know what the record of the Holstein's was. (Laughter) Did you know it? Didn't you promise to write to me, and you didn't do it? (Laughter)

Mr. Marsh: You said you would beat it and you kept your word.

Mr. Cassatt: I did. Anyhow, we milked along, and I want to call your attention now to some peculiarities of this milking. On the top of the first page, on the first side of this sheet, I have here in May, you will see, two days in parenthesis. In June none; July a lot; August a lot. In all those months, all the way up to December, this poor old cow dropped away down and scared the life out of us, and if you will refer to the July feeding, last year, you will see the various expedients we have for trying to make her get a little bit better, give a little bit more. Or was it June? In July she dropped down, and in July we fed her for the first only 18 pounds of the grain ration. And, 2nd to the 10th, inclusive—it does not say here, it is badly printed, we dropped it down to only 15 pounds; and we sent all over the country for alfalfa hay, and for California hay. The regular California hay is wheat and oats mixed and chopped grain. We sent for some of that, and we had five racks in front of her with various kinds of hay. We did not have any electric fan because the veterinarian said that would make her nervous. (Laughter)

Then she came back to her good yield in July and then dropped down again in August, and we got worried again. I didn't know what the trouble was, and we come to the low days in August. Then the same in September, and by that time we quit worrying about it.

Then came the question of how we were going to keep her warm in the winter, and I had an awful fight with the veterinary surgeon and the manager of the farm, and everything else, and I built her a stall better sealed than this room, except it was not plastered and gilt around the top; patent ventilators, screens, and a bed room next door for her nurse, thermometers, and everything else; so she went in there, she stayed all through this winter. Some of you gentlemen saw this palace I built. She stayed there in the temperature of 60 degrees, and a man was there to take care of her. He was so careful about her, one day I wanted to show him what I wanted, and I said, "Walk up and I will show you what I want." I got to the door, and he says, "Well, Captain, if you will do me the favor to wait twenty minutes before you come in there." I said, "Why should I wait?" "She is being milked and she might drop down two pounds." We waited. That is no joke, because one of those testers of Mr. Caldwell's arrived at noon and we walked in the stall while she was being milked, and she dropped off four pounds from her average of the previous weeks on the milking. I didn't see any of the 4 a. m. nor any of the 8 p. m. milkings. (Laughter)

That is how we worked it. We fed her this mixture and we put 75 pounds of silage in with her in the morning and left it there. This old cow would go and pick out a little grain here and a little grain there, and then go and get a little light in another place. She had the five racks, and would go and take a little bit of this and then go and look out of the window, and pant a little while, and then take a little more hay. (Laughter.)

That is about all I can tell you about the feeding of her, and I have told you all I know about her ancestors. There is nothing to know about them except their names. (Laughter) Then you take this cost of food on the back of the sheet, you will find the feed she ate cost $222.44 for 17,307 pounds of food, and she drank 27,000 pounds of water.

You will find then, figuring the wages at $197.10, her gross operating expenses as the railroad men say (Laughter) $419.54 but Mr. Caldwell got $213 more of it for his testers. That makes about $630 for the gross cost of producing this milk. And I will let every person here figure the gross revenue by multiplying the number of pounds of milk or butter whichever he sells, less the expense, and he will in that way figure a net profit. (Laughter.) I get twelve cents a quart for the milk, so I multiply it by 6 and I get about $600 net profit on this year's experiments, except that it does not count the price of that palace, because I will have that for May's sister, when she starts in next fall to beat this thing.

May Rilma has only one daughter and one son. The son is named Bob Rilma. I want to say that I did not name all my own cows; I did not use to, but I am going to name them hereafter. Dr. Russell sold me a couple of bulls a little while ago, and their names are King Masher 8th and King Masher 9th, and the two daughters, I call one Royal Flirt and the other one Miss Fitz Herbert. (Laughter) If they had been named by him he probably would have called one Miss Jane of Chesterbrook, or something like that. I guess that is enough jokes now.

I want to ask Mr. Marsh if he heard anything about Bob Rilma, May's son.

Mr. Marsh: Mr. Fred Stubbs could tell you all about that.

Mr. Stubbs: Do you want to know where he is?

Captain Cassatt: Yes. Has he any daughters in the register?

Mr. Stubbs: No, sir, none under test. The two oldest daughters are fresh.

Captain Cassatt: Does he belong to you?

Mr. Stubbs: No, sir, I am sorry to say.

Captain Cassatt: I sold him for $20, I am sorry to say. (Laughter) Mr. Phillips of Pomeroy got him, and somebody else got him, and somebody else got him for $2000. I thank you for listening to me, and that is all I will inflict upon you tonight.

Chairman Van Alstyne: I am sure we are very grateful to Captain Cassatt, not only for the information, but the very pleasing way that he has imparted it. Somebody has said statistics are dry, but certainly, I was going to say they were very wet, but certainly very fruitful. I know you will all be exceedingly grateful to see in the flesh as well as hear one whose name is almost a household word to every dairyman who has made any study at all in the matter of dairy feeding and dairy matters pertaining to the care of dairy cattle.

I am very pleased to have the privilege of presenting to you tonight Professor T. L. Haecker, who will speak to us on the relation of food to product in the production. (Applause)

The Relation of Food to Product in Milk Production

An Address Delivered at the Annual Meeting of the American Guernsey Cattle Club, New York City, May 12, 1914, by T. L. Haecker, Chief, Division of Dairy and Animal Husbandry University of Minnesota

While I highly appreciate the honor of addressing a body embracing many of most distinguished American breeders, it is with considerable hesitation and embarrassment that I undertake the task. Your minds are occupied chiefly in the work of moulding and perfecting a perfect dairy animals, while mine has been dealing with the intricate problems of nutrition which have a direct bearing upon the economic phase of the dairy industry as a whole.

I went to Minnesota experienced in practical dairying and breeding, but without training in investigational work, so the experiments began along the most elementary lines to determine what profit the industry promised to the average farmer. This naturally required careful records both of feed consumed and of dairy products returned. The first two years' work showed great variation between the cows in net results obtained. Fortunately the herd was composed of the various breeds of cattle and their grades. A careful study of the individual cows of the herd with the feed consumed and products yielded, brought to light for the first time so far as I know, the relation of type to production. The importance of employing animals having dairy heredity combined with a type that had as marked a distinction from the beef form as was the form of the trotter from that of the draft horse, or the form of the gray hound from that of the bull dog, was clearly demonstrated.

The idea was not a new one, for Governor Hoard had held for years that there was such a thing as dairy temperament and that function molded the form, but this was the first time the dairy cow had an opportunity to verify it by actual demonstration..

No rash claims were made for the cow with the deep body and angular form. Facts were submitted. The experiment suggested the inquiry, is there always such difference and if so, why?

For three years the experimental work with the herd was given over to a verification of the results obtained in the first trial published in bulletin 35. The average yield of the dairy type cows during the three years was 47 per cent greater than that of the beefy group and the average cost of the product of the beefy group was 37 per cent greater than the cost of the product from the dairy type group.

During the first few years considerable difficulty was experienced in securing satisfactory roughage. Tame hay lacked uniformity both in composition and palatability. Some seasons there would be a poor stand, or it would winter kill and the coarse stems would not be eaten by the cows. Much was cut too late and bleached by rains. Tame hay also cost more than prairie hay. Choice upland prairie hay is very uniform and cost from $3 to $5 per ton baled, and cows would eat it up clean if as much as was needed by each cow was weighed to her at each feeding, but its feeding value for milk production was not known. It was decided in the fall of 1893 to give it a careful trial. For two winters one-half the herd received timothy and one half prairie hay. Digestion experiments were also made to determine the co-efficients of digestibility of the different components. Experiments were carried out to find the value of wheat for milk production by comparing it with corn and barley.

The value of the feeds was measured by the milk and butter fat produced during the periods each was fed. The results showed that prairie hay had a feeding value at least equal to the best timothy and that for experimental work it was far superior because cows would eat it up clean if only as much as they needed was given them. Since that time no tame hay has been used in the dairy except a little second crop clover which is used for the calves.

In compiling the data secured during the years when the experiments, studying—"The relation of type to production; The cost of dairy products; and the one determining the feeding value of wheat and timothy hay, were carried on; formulas of rations were made showing the amount of dry matter and nutrients contained in the rations fed some of the cows when on the prairie hay ration as compared with the nutrient content of the ration when timothy was fed. This was the first time that any reference had been made to the nutrients in the rations fed to the herd, and this was not done until after the completion of the experiment. The following quotation from bulletin 67 of the text following the rations formulated, is all that appeared in our bulleting with respect to nutrients required in milk production up to the autumn of 1899: the bulletin was published in 1900.

"The following table gives the actual total dry matter and digestible nutrients consumed by the different cows per day; also the amount they took per 1,000 pounds live weight. The standard ration for a dairy cow weighing 1,000 pounds is generally fixed at 24 pounds dry matter, containing 15.4 pounds digestible nutrients, of which 2.5 are protein, 12.5 carbohydrates and .4 pounds of fat. In practical feeding, however, little attention can be given to this, since it is found that some heavy cows are comparatively light feeders and some light cows are heavy feeders. This is shown by the following table giving the daily average of dry matter eaten by the cows from February 11 to April 21, 1895. Incidentally is given the calculated digestible nutrients contained in the ration with the average daily yield of milk and butter fat.

Table--Giving the Daily Average Pounds of Dry Matter and Nutrients Consumed and Milk and Butter Fat Yielded from Feb. 11 to April 21, 1895

Name of Cows	Dry Matter	Digestible			Average Daily Yield		
		Protein	Carbohydrates	Fat	Milk	Per Cent Fat	Butter Fat
Beckley	21.19	1.68	11.10	.51	13.17	5.59	.736
Countess	29.22	2.40	15.50	.72	41.80	2.53	1.061
Houston	25.24	2.14	13.35	.64	24.88	5.38	1.340

In adjusting the ration for each cow her feeding capacity only was taken into account. Had they been fed according to weight many of the cows would have gone hungry while others would have received more than they could eat."

The daily average of digestable protein consumed by the different cows ranged from 1.56 pounds to 2.59 pounds, and of carbohydrates from 10.33 pounds to 16.79 pounds with proportional variations in ether extract. The daily average yield of milk ranged from 13.17 pounds to 43.55 pounds and of butter fat from .73 of a pound to 1.54 pounds. The light yields were from three heifers with first calf and from the farrow cow Belle that was in milk when she was purchased in the fall.

After the bulletin was published, Hoard's Dairyman called attention to the discrepancy between the amount of protein prescribed in the feeding standard for milk production and the amount used by the different cows listed in the table, and also to the statement that "in practical feeding little attention can be given to the feeding standard," stating that 'if such is the case was it not high time that a standard should be worked out' which could be employed by the layman in his practical feeding operations." I had been in close touch with the Governor for many years, and had learned to entertain great respect for his judgment. I realized the pertinency of his proposition and gave it careful consideration. At first it seemed too intricate a problem to undertake.

I had, however, been doing some thinking along this line. Wolff had formulated a standard for the food of maintenance of the bovine. He prescribed 18 pounds of dry matter containing of digestible nutrients .7 of a pound of protein, 12.5 of carbohydrates and .4 of a pound of ether extract as the amount required daily to maintain body heat, replace the waste tissues of the body and the energy required to carry on the involuntary activities of the body. During the winter of 1893-4, I noticed that some of the cows maintained their weight and yielded a considerable mess of milk with only a trifle more nutriment than was prescribed for body maintenance. It appeared as though either the cows were making a mistake or the scientist had. On the 31st of October, 1894, two barren dry cows were started on an experiment. They received daily 10 pounds of timothy hay, and 3 pounds of barley meal. The ration fed provided practically the amount of nutriment called for by the Wolff standard, and during a period of 81 days they gained 59 pounds. During the winter of 1896-7, a similar experiment was carried on for 100 days with two dry barren cows. During the winter of 1897-8, the experiment was repeated with three cows for a period of 128 days and the winter following one cow was so employed for a period of 168 days. All the trials aggregated 914 days with a daily average requirement of 11.38 pounds of dry matter, .63 of a pound of protein, 5.75 pounds of carbohydrates, and .12 of a pound of ether extract with a daily average gain of 2.3 of a pound in live weight. The Wolff standard provided 8.92 pounds of nutriment daily, while the cows on experiments used 6.64 pounds and gained daily nearly a quarter of a pound.

The results were so uniform during the four winters, that there was no question as to accuracy, and by simplyfying the results, it justified a standard of 14 pounds of dry matter, .6 of a pound of protein, and 6 pounds of carbohydrates, and .1 of a pound of ether extract when cows are kept under similar conditions to those in the experiment. But conditions with a dairy herd on full work, with an outing more or less every day, requiring considerable muscular activity, and exposure to the varying weather conditions, are quite different, and more nutriment would be required than when confined to comfortable quarters, with no exercise except to step out of their stalls twice a week to be weighed, so an allowance had to be made to provide for the additional activities of the body under average herd conditions. The standard was adjusted to .7 of a pound of protein, 7 pounds of carbohydrates and .1 of a pound of ether extract, per 1000 pounds live weight. I have used this standard for 13 years, and have found no occasion for a change.

During the winter of 1899—1900, Professor Major and I carried on an experiment with a view of determining the protein requirements for milk production, and in submitting the results for publication, the introductory paragraphs reviewed the work done by certain investigators, and compared them with the results obtained with the dairy herd the winter of 1894-5.

Doctor C. Lehmann, of the Berlin Agricultural College, in 1897 modified the Wolff standard prescribing in addition to the protein required for maintenance .08 of a pound of digestible protein for each pound of milk yielded instead of the 2.5 pounds of protein per day per 1000 pounds live weight. That is, Doctor Lehmann calculated that cows needed .7 of a pound of protein per day for maintenance, and in addition .08 of a pound of protein for each pound of milk yielded. To test this new factor as to the amount of net protein required for milk production, we calculated the daily average of crude protein consumed during the winter of 1894-5, covering a period of 154 days, deducting the average amount of

protein required for maintenance at the rate of .7 of a pound per 1000 pounds live weight, the remainder was divided by the average daily yield of milk which showed that during the first half of the winter the cows returned a pound of milk to .046 of a pound, and during the last half .048 of a pound of digestible protein. That is, the Wolff-Lehmann standard prescribed 72.3 per cent more protein than the herd required during a winter when it maintained an equilibrium in body weight and made a remarkable record in uniform flow of milk–averaging 29.85 pounds of milk per day the first half of the winter and 25.23 pounds the last half. Similar computations made with the individual members of the group showed that the net protein consumed to a pound of milk yielded, ranged from .034 of a pound of protein for milk testing 2.4 per cent fat to .109 of a pound of protein for milk testing 6.7 per cent fat. In a general way the net protein consumed to a pound of milk yielded, increased with the per cent fat in the milk, but not in the same ratio. The variations from this general rule were by heifers that diverted a portion of body growth and by cows making slight gain or loss in body weight. So far as I know, this was the first discovery or mention made of the fact that protein requirements in milk production depend upon its per cent fat content as well as upon quantity yielded.

The results obtained from the experimental feeding during the winter of 1899-1900 were of little value except to convince us that experiments conducted upon the alternating periods plan, were of little value, as the milk making functions are involuntary, and cows could not materially re-adjust the milk flow to the varying rations.

No experiment in protein requirements was carried on during the winter of 1900-1, but for the following winter's work the herd was divided into three groups: the first to receive approximately 2 pounds of protein daily, the second, 1.7 pounds, and the third, 1.3 pounds. No change was to be made in the ration assigned to each group. In the summary of the results, instead of comparing the yield of butter fat with the protein supply, comparison was made with the amount of net nutriment required by each group for the production of 1 pound of milk solids. The first group returned 1 pound of milk solids to 1.98 pounds of nutriment; the second, 1.86 pounds, and third, 1.98, showing that the group receiving 1.3 pounds of protein daily made the same return as did the group receiving 2 pounds of protein. Another comparison was made with the nutrients in the daily average ration of each group, reduced to carbohydrate equivalent, and the milk solids to an equivalent of solids not fat, termed "total product." The first returned a pound of total product to 1.46 pounds nutriment, the second, 1.41 pounds, and third, 1.45 pounds. In a study of the relation of the net nutriment to total product returned during certain periods of lactation, it was shown conclusively that cows freshening under a high state of plethora, returned total product greatly in excess of the amount of the nutriment available for product at great sacrifice of body weight.

A further study was also made of the net nutriment requirements by the herd during the winter of 1894-5, employing only the records of the mature cows that neither lost nor gained in weight during the winter. The daily average of net nutrients required by the different cows for the production of a pound of milk is shown by the following table:

Table Giving Net Nutrients Consumed per Pound of Milk Yielded by Mature Cows.

Cow	Percent Fat	Protein	Carbo-hydrates	Ether Extract	Total Nutriment.
Countess	2.5	.036	.16	.012	.222
Lou	3.7	.040	.20	.014	.271
Topsy	3.7	.042	.20	.014	.273
Olive	4.0	.044	.22	.016	.299
Sweet Briar	5.0	.052	.24	.018	.332
Houston	5.5	.057	.26	.019	.359

By this table it was clearly shown that the amount of net nutrients consumed to a pound of milk yielded increased with the increase in its percent fat content, but not in the same proportion; for Countess gave milk testing 2.5 percent fat and used .036 of a pound available protein; while Sweet Briar gave milk containing twice as much fat but did not use twice as much protein; the same is true with the other nutrients consumed to a pound of milk yielded.

With this evidence before us, the question naturally arose, is this the minimum amount of protein needed in a ration, or can cows kept in normal condition return a normal yield with less protein? To solve this problem, the herd for the winter of 1902-3 was divided into two groups, one to receive approximately 1.3 pounds of protein daily, and the other approximately 2 pounds. It was not expected that the nutriment content of the average daily ration would be exactly the amount planned, because feed stuffs vary somewhat in composition with the varying weather conditions, and the variation in the fertility of the soil in different fields. As a rule, the composition of the feed stuffs fed during the winter was not known until sometime in the following spring or early summer. The time the cows were on experiment during the winter of 1902-3, averaged just 100 days, and the daily average of results obtained as given in the following table:

Summary of Dry Matter and Digestible Nutrients Consumed and Dairy Products Yielded during nine Winters of Stall Feeding.

Winter	Group	Dry Matter	Crude protein	Carbo-hydrates	Ether extract	Butter Fat	Solids not-fat	Nutritive ratio of rations
		Lbs.	Lbs.	Lbs.	Lbs.	Lbs.	Lbs.	
1894–1895		24.40	2.00	12.46	0.56	1.069	2.09	1:6.8

1902–1903	11	21.77	1.92	11.86	0.48	1.048	2.21	1:6.7
1903–1904	1	19.68	1.32	11.04	0.39	0.996	2.10	1:9.0
1903–1904	11	20.65	1.97	10.99	0.36	1.032	2.02	1:6.1
1904–1905	1	20.52	1.30	11.71	0.50	0.852	1.81	1:9.8
1904–1905	11	21.97	1.92	11.95	0.50	1.030	2.11	1:6.8
1905–1906		21.86	1.63	12.55	0.50	1.013	2.14	1:8.3
1906–1907		22.87	1.74	13.05	0.63	1.068	2.26	1:8.3
1907–1908		23.89	1.75	12.78	0.64	1.094	2.28	1:8.1
1908–1909		24.13	1.86	12.62	0.80	1.094	2.29	1:7.7

This table gives a summary of pounds of dry matter and digestible nutrients consumed and dairy products yielded during nine winters of stall feeding. The results obtained during 1894-5 have been discussed. The results for 1895-6 have not been referred to because there were two products—dairy and gain in body weight, and the results are, therefore, not comparable with the others. Comparing Group I with Group II for the winter of 1902-3, it is shown that there is a depression in yield of butter fat, and there was also a marked decrease in body weight. However, when we compared the total nutrients consumed by each group with the total milk solids yielded, it was found that Group I returned one pound of milk solids to 3.24 pounds of nutriment, while Group II required 3.25 pounds. After the close of the experiment, a committee appointed to inspect the two groups concluded that the cows were in normal condition, but that those in Group I were more spare than the others.

During the winter of 1903-4, the experiment was repeated, and the average time covered by the experiment was 191 days. Group I received 1.32 pounds of protein, and yielded .996 of a pound of butter fat. Reducing the butter fat and solids not fat yielded by each group to a common factor, it was found that both were 4.34 pounds. Group I returned a pound of product to 3.05 pounds of nutriment consumed, and lost in body weight, while Group II used 3.16 pounds, and made slight gain in weight. The remarkable phase of this work was that Group I, with only a trifle over half the protein prescribed by the standard, returned a normal yield of dairy products for a period of 187 days.

After the close of the experiment, the cows were carefully inspected with refereene to their physical condition by Director Liggett, Professor M. H. Reynolds, Station Veterinarian and Professor Harry Snyder, Station Chemist, with the conclusion that the cows receiving the low protein ration, though rather spare, were apparently in fine physical condition.

As the final result of these experiments had a direct bearing on the fundamental principles of feeding for milk production as well as the volume and economy of production, it was deemed of great importance that the physical condition of the cows in the two groups be submitted to others of high repute in such matters.

Hon. W. D. Hoard of Fort Atkinson, Wisconsin, Editor of Hoard's Dairyman, and Professor W. A. Genry, Director of the Wisconsin Experiment Station were invited to inspect the cows with special reference to their physical condition. Both accepted the invitation and the day was set for the inspection. At the appointed time Professor Henry reported that Governor Hoard was unable to accompany him, but that he would come a few days later. Written directions were sent to the dairy stock foreman to bring the cows used in the feeding experiment to the stock lecture room in the basement of Dairy Hall in pairs, one from each group in the following order:

Houston II from Group I and Betty O from Group II; Fay from Group I and Cylene from Group II; Lou II from Group I and Dora F from Group II; Leeoma from Group I and Duchess P. P. from Group II; Sweet Cicily from Group I and Topsy II from Group I; Tricksey C from Group I and Pride III from Group II; Trust from Group I and Trusty Lee from Group II; White from Group I and Star II from Group II.

The order in which they were to be brought into the lecture room for inspection was known only to the author and the stock foreman. Only two cows were in the room at a time, affording ample opportunity to make a thorough examination for a decision as to which one received the low protein ration. Dean Henry gave each pair a careful and thorough inspection, but from the decisions made it was evident that there was no apparent difference in their physical condition. He requested that the two groups be turned to adjoining paddocks near by so he could compare the two groups in the open. This was done and after looking them over carefully said: "If I should come by on the highway and see the cows in this paddock I would say there is a lot of fine cows in good working condition, and if I should pass on and see this other group in a neighbor's yard, I would say there is another lot of fine cows in good working condition but a trifle spare."

In a few days Governor Hoard came to University Farm to inspect the cows. Word was sent to the stock foreman to repeat the program given when Dean Henry insepcted the cows. Governor Hoard, Dean Liggett, and Professor Snyder accompanied the writer to the stock room and found Bettie and Houston there. The Governor gave both a very careful examination, feeling the coat and skin on various parts of the body, finally putting his hand on Bettie's back, said: "This is the one." The writer shook his head the Governor said "No?", and again receiving a negative sign, he repeated the examination and then said: "That is all." The cows were led out and Fay and Cylene were brought in. Going over them in the same way, paying little attention to the appearance of the cows, pointed to Fay saying: "That is one on the low protein ration." The writer affirming the decision directed that they be led out, and Lou II and Dora F. brought in. After giving only a cursory examination, Governor Hoard pointed to Lou II as the one. Again affirming the decision, the cows were led out and Leeoma and Duchess P. P. brought in. These in turn received very careful and extended examination, with some indications of doubt, but finally Leeoma was selected and upon receiving an affirmative reply said: "I believe I have got them." The next pair brought in was Sweet C. and Topsy II. He went over them very carefully, stopped and looked at them a moment and then re-examined them repeatedly, passing the skin between thumbs and fingers as he stood between the two cows, at the same time examining one with the right hand and the other with the left; finally saying "It's a guess. This is the one," pointing to Topsy. "It's both," remarked the writer. The Governor manifested great satisfaction and said, "I told you it was a guess, I couldn't differentiate between them." As the other pairs were brought to him he had little difficulty in pointing out the ones fed on a low protein ration. Governor Hoard did not volunteer an explanation as to how he distinguished members of one group from those of the other. He was not then requested to do so; but meeting him in St. Louis during the Louisiana Purchase Exposition, the writer asked for an explanation. He answered: "By the feel of the skin. Of the first two cows one had a skin of ordinary thickness, while the other had a very thin skin. The first time it was a trial, I pointed to one and you shook your head. I then examined them again and after that I selected the one with a thin skin."

The decisions established the fact that in general appearance, the two groups were closely matched. The only difference, so far as could be discerned with the eye, was that the cows of one group were a trifle sparer than those of the other; but that there was a difference in their physical condition was shown by Governor Hoard's decisions. There was also some significance in his pointing out Topsy II as the one of the low protein group when both had received a low protein ration, because this was Topsy's second and Sweet Cicily's first winter on a low protein ration. The same was the case when he betrayed some doubt before finally pointing to Leeoma as the one receiving the low protein ration, as this was the first winter she was given a low protein ration and was also in high flesh when she freshened and had shrunk in

yield to a point where an equilibrium had been reached between the milk solids yielded and the net nutrients provided in the daily ration, some nine weeks before the close of the experiment.

The ration fed during the winter of 1904-5 was standard as to quantity of dry matter consumed daily, being at the rate of 24.4 pounds for Group I and 24.8 pounds for Group II per 10 cwt. Group I received 1.30 pounds of crude protein daily from Oct. 31 to March 12 inclusive and from March 14 to April 30, 1905, the same ration that Group II was receiving. Group II received 1.92 pounds protein from Oct. 31, 1904 to April 30, 1905.

Early in March, it became apparent that some of the cows in Group I were beginning to show marked depression in physical tone. When turned into the runway for water, they lacked alertness and activity shown by Group II. Their eyes were dull, coats harsh, and skin drawn. They were slow, did not seem to relish their food and betrayed in every movement a low state of vitality. This was especially noticeable in those giving milk of low fat content. There was no marked shrinkage in flow of milk, which was in part due to the fact that they started in the fall with a very low yield of milk and milk solids. On March 13, the cows weighed on an average 810 pounds and were yielding 18.7 pounds of milk, containing .81 of a pound of butter fat and 1.68 pounds of solids not fat on a ration containing 20.84 dry matter, 1.333 pounds of protein, 11.93 pounds of carbohydrates and .51 of a pound of ether extract, or 14.385 pounds of nutriment. The ration was then changed by substituting 4 pounds of gluten feed for 4 pounds of corn, providing 20.84 pounds of dry matter containing 1.848 of a pound protein, 11.33 pounds carbohydrates and .48 of a pound of fat. At the expiration of 49 days the average gain in body weight per cow was 72 while the increase in dairy products was only .05 of a pound. It appeared that with the cows that had been on a low protein ration, there was such a demand for protein because of the impoveraged condition of the nitrogenous substances on the body, that nothing was left for an increase in dairy products. The other group with the same ration gained 29 pounds and decreased in yield of dairy products.

The four winters' trial on protein requirements showed that cows with a strong dairy heredity could for two or three years give approximately a normal yield of milk solids with a daily supply of 1.3 pounds of net protein, but they would lose in body weight and show a gradual depression in vitality.

At the time these experiments were carried on, we had no knowledge in regard to the average composition of the various grades of milk, and the thought occurred to me that in order to find a scientific and practical standard for milk production, we must first find out how much protein there was in the various grades of milk and then by a series of experiments determine how much net crude protein in the feed was required to produce a unit of pure protein in the milk, and the same with the other components in the feed, and the corresponding solids in the milk. I submitted this proposition to an eminent chemist. He laughed and replied, "You can't do that because some cows require twice as much feed to produce a given mess of milk as others, etc." I had, however, come to a different conclusion by comparing the nutrients used by cows giving milk containing a low fat content with those used for milk containing a high percent of fat. So it was decided to carry on two lines of work, one to determine the protein supply actually needed, by each winter increasing the amount fed, and then compare the daily average of net nutriment consumed to dairy products yielded during the different winters, and the other to determine the composition of the various grades of milk. This required four years, during which time 7602 milkings were analyzed. Each determination was made from a composite sample of 14 milkings from a certain cow.

It will be noticed that during the winter of 1905-6, the cows received daily 1.63 pounds of digestible protein and returned 1.013 pounds of butter fat being less than was secured any winter except 1895-6 when the cows had diverted considerable feed to body gain, and the group that received the very low protein rations. The light yield is believed to have been partially, if not whoolly due to the fact that the cows that were on the low protein rations during winters preceding are included in the summary and that they had not fully recovered from the ill effects.

During the winter of 1906-7, the herd received a daily average protein supply of 1.74 pounds, and yielded 1.068 pounds of butter fat, being just a trifle less than was received during the winter of 1894-5, the best average results of any winter. During the winter of 1907-8, the herd received practically the same amunt of protein and returned 1.094 pounds of butter fat, and the following winter 1.86 pounds of protein and returned the same amount of butter fat, indicating the protein supply was really in excess of the amount actually needed.

Summary of Average Live Weight, Nutriment Daily, Total for Maintenance, for Product, and in Product Yielded, Net Nutriment per Pound of Product and Weight of Cows.

Winter	Total	Nutriment Maintenance	Product	Total Product daily	Net Nutriment to 1-lb. product	Weight		
						Period I	II	Average
	Lbs.	Lbs.	Lbs.	Lbs.	Lbs.	Lbs.	Lbs.	Lbs.
1894–1895	15.69	7.57	8.13	4.495	1.81	954	958	956
1895–1896	16.30	7.75	8.55	4.295	1.99			976
1902–1903	14.84	6.95	7.88	4.576	1.72	882	878	880
1903–1904	13.74	7.18	6.56	4.341	1.51	900	913	907
1904–1905	14.98	7.14	7.84	4.427	1.77	896	905	901
1905–1906	15.27	6.85	8.43	4.425	1.90	868	861	864
1906–1907	16.18	7.19	8.99	4.663	1.92	908	906	907
1907–1908	15.95	6.85	9.10	4.741	1.92	864	866	865
1908–1909	16.25	7.41	8.84	4.751	1.86	933	939	936
Average	15.47	7.20	8.27	4.523	1.83	901	903	910
Average without 1902–1903	15.55	7.24	8.31	4.517	1.84	903	907	914

In this table the data given in the previous table is put in different form, and that secured from the group of cows on the low protein ration is eliminated. The nutrients consumed daily are given in the form of nutriment, being the ether extract multiplied by 2.2, and the product added to the carbohydrates and protein. The amount needed daily for maintenance, and the amount remaining available for product. The product is the butter fat multiplied by 2.25, and the product added to the solids not fat. The next column gives the net nutriment consumed to 1 pound of product returned. The columns give first the average weight of the herd the first half of the winter, the second the average weight the last half and the third, the average for the winter. Attention is first called to the large product returned during the winter of 1902-3 compared with product returned the two winters preceding and four winters following. This discrepancy is largely, if not wholly due to the short time covered by the data, being only 8 weeks, while the others cover approximately 24 weeks. Second, the product for the winter 1895-6, was exceptionally small, because part of the nutrients had been diverted to gain in body weight, which causes the net nutriment charged to a pound of product to be exceptionally large. Third, the light ration fed during the winter of 1903-4, containing only 13.74 pounds of nutriment daily, and the exceptionally small amount of net nutriment required for the production of a pound of dairy products. The only known exceptional condition which would tend toward such a result, was the fact that more roots were fed that winter and for a longer period, and fourth, the weight of the herd during the two periods and the average for the winter. With the exception of 1905-6, the weights were fairly well sustained.

Average Amount of Nutriment Consumed and Dairy Products Yielded per 1,000 pounds Live Weight.

Winter	Nutriment Total	Maintenance	Product	Total product	Net nutriment per lb. of product	Nutritive ratio
	Lbs.	Lbs.	Lbs.	Lbs.	Lbs.	
1894–1895	16.41	7.92	8.49	4.696	1.81	1:6.8
1895–1896	16.70	7.92	8.78	4.401	1.99	1:5.3
1903–1904	15.15	7.92	7.23	4.786	1.51	1:6.1

1905–1906	17.67	7.92	9.75	5.121	1.91	1:8.3
1906–1907	17.84	7.92	9.92	5.141	1.91	1:8.3
1907–1908	18.44	7.92	10.52	5.481	1.92	1:8.1
1908–1909	17.39	7.92	9.35	5.076	1.86	1:7.7
Average	17.03	7.92	9.11	4.952	1.84	1:7.0

This table gives the nutriment consumed and products yielded daily per 1000 pounds live weight, the net nutriment used per pound of dairy products yielded and the average nutritive ratio of the ration fed each year. The column giving the total nutriment consumed daily shows that during the first four years the cows received relatively a lighter ration than did the last four years, the average difference being 1.6 pounds. The product and the net nutriment consumed to a pound of product is less, and the average nutritive ratio is narrower, being 1:6.2. Special attention is invited to the relation of the amount of nutriment consumed daily, and the net nutriment required to a pound of product yielded. Barring the two winters when exceptional conditions obtained, the heavier the ration, the more nutriment was required to a pound of product, though the difference is small and in practical feeding is a negligible quantity. The results as a whole, are remarkable uniform, and show that on an average 1.84 pounds net nutriment was used to one pound of product. Upon the basis of the factor for maintenance given the cows used 46.5 percent of the nutriment for maintenance, leaving 53.5 for product. Of this, 29.1 appeared in the milk solids and 24.4 was expended in energy in the digestive processes, and the waste in the transferrence of the feed nutrients to milk solids.

Variation in Nutriment Consumed, Products Yielded, Percent in Product and Percent Expended for Maintenance, Energy and Waste per 1000 Pounds Live Weight.

Winter	Nutriment Daily	Product Daily	Percent Returned in Product	Percent Expended in Maintenance Energy and Waste
	Lbs.	Lbs.		
1903–1904	15.15	4.786	31.59	68.41
1894–1895	16.41	4.696	28.62	71.38
1904–1905	16.64	4.913	29.52	70.48
1908–1909	17.39	5.076	29.19	70.81
1905–1906	17.67	5.121	28.98	71.02
1906–1907	17.84	5.141	28.82	71.18
1907–1908	18.44	5.481	29.72	70.28

In this table the data are arranged on the basis of the average amount of nutriment consumed daily per 1000 pounds live weight, during the winters when an equilibrium in body weight of the herd was maintained, and when the experimental feeding covered periods ranging from 154 to 196 days. The daily average nutriment consumed ranges from 15.15 to 18.44 pounds, and the average for the seven winters was 17.08 pounds. The daily average product ranged from 4.693 to 5.481, and averaged 5.031 pounds of water free milk solids, the fat reduced to an equivalent of solids not fat. In a general way, the product returned was proportionate to the nutriment consumed, except during the first two winters, when a greater product was returned from 15.15 pounds of nutriment than from 16.41 pounds. This may be due to the fact that more roots were fed, and for a longer period during the winter of 1903-4 than any other winter, and that the data from five heifers three with first calf is included in the record for the winter of 1894-5. These two exceptional conditions are also reflected in the percentage returned in product, that for the first year given in the table is 31.59, the largest return during the seven winters, while in the second it is 28.62, the smallest return. The percentage returned in product the other years is remarkably uniform, the greatest variation being only .9 of one percent. The average percentage in product for the seven years was 29.49. The last column shows that the average amount expended for body maintenance, energy and waste in converting feed nutrients to milk solids,ranged from 68.41 to 71.38 percent and averaged 70.51 per cent. The minimum and maximum used for maintenance. etc., are found in the first two years given in the table, doubtless caused by the exceptional conditions referred to. The ration fed during the winter of 1903-4 had greater net nutritive value because it contained more roots, requiring less energy for maintenance and the digestive process, and consequently leaving relatively more for product. On the other hand the nutriment used for growth by the five heifers during the winter 1894-5 could not be counted for product and is included in the last column. The results show remarkable uniformity and the efficiency of the dairy cow in converting feed into food for mankind.

The Composition of Milk.

It has been shown that there was a remarkable uniformity in the net nutriment required for the production of a unit of milk solids when nutrients consumed and milk solids produced were reduced to carbohydrate equivalent. The milk solids

are composed of butter fat, and solids-not-fat. The organic solids other than fat are sugar and protein. In Bulletin 79 of this Station, published in January, 1903, it was clearly shown that cows need net nutriment in their rations proportionate to the quality of the milk as measured by the fat content. It also appeared that the richer the milk in fat, the more net protein was consumed per unit of milk produced. Whether this was merely incidental because more nutriment was required as milk increased in fat percentage, or whether more protein was required because there was more protein in the richer milk, did not appear because the relation of protein to fat in the various grades of milk was not known. As the protein content of the food of maintenance was adjusted to the needs of the animal for the maintenance of the body, so must the protein in the production part of the ration be adjusted to the protein content of the milk. In order to make such adjustment possible, it was necessary to find the protein content of milk of the various grades as measured by the fat content, by making a gravimetric analysis of a large number of samples of milk, and grouping them in specific grades. It was also necessary to determine the average composition of the samples of the various groups instead of finding the average composition of all samples of milk analyzed as had been the custom.

The milk was divided into ten grades. That testing under 2.75 percent fat was put into the 2.5 grade, from 2.75 to 3.25 into the 3 percent grade, from 3.25 to 3.75 into the 3.5 grade, from 3.75 to 4.25 into 4 percent grade and so on to the 7 percent grade. By this method, a sample did not vary more than a quarter of 1 percent from the average of its class.

Summary of Organic Composition of Milk and Relation of Solids.

Samples	Number of Milkings	Composition Fat	Protein	Carbohydrates	Total Solids Carbohydrate equivalent	Nutritive ratio	Fats to Solids not fat
		P. Ct.	P. Ct.	P. Ct.	P. Ct.		
		2.5	2.55	4.45	12.62	1:3.95	1:2.80
47	658	3.0	2.68	4.60	14.03	1:4.23	1:2.43
55	770	3.5	2.81	4.75	15.53	1:4.49	1:2.16
57	798	4.0	3.08	4.85	16.93	1:4.49	1:1.97
116	1.624	4.5	3.27	4.97	18.36	1:4.62	1:1.83
103	1.442	5.0	3.45	4.99	19.68	1:4.70	1:1.68
89	1.246	5.5	3.65	4.92	20.94	1:4.74	1:1.56
39	546	6.0	3.82	4.91	22.23	1:4.82	1:1.45
24	336	6.5	4.02	4.90	23.54	1:4.85	1:1.37
13	182	7.0	4.22	4.84	24.81	1:4.88	1:1.29

Percentage Composition of Water-free Substance in Milk of Varying Grades.

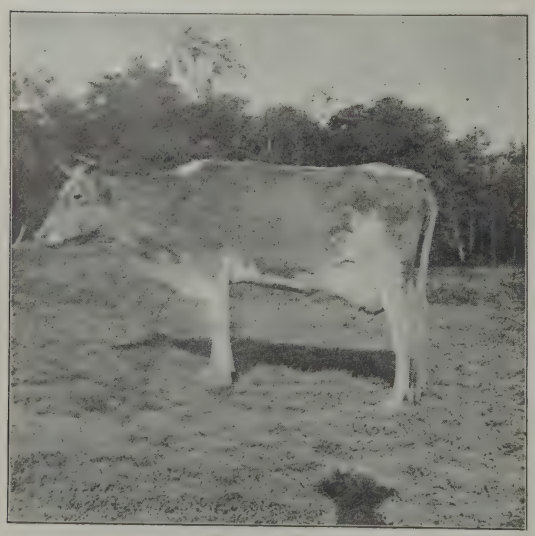
Grade of Milk	Butter Fat	Protein	Carbohydrates	Ash
3% fat	27.27	24.36	41.83	6.54
3.5 "	29.76	23.89	40.40	5.95
4.0 "	31.70	24.40	38.45	5.46
4.5 "	33.41	24.28	36.89	5.42
5.0 "	35.28	24.35	35.22	5.15
5.5 "	37.16	24.66	33.25	4.93
6.0 "	38.78	24.69	31.75	4.78
6.5 "	39.95	25.32	30.12	4.61
7.0 "	41.62	25.09	28.78	4.51

This table is based on analyses of 543 samples taken from 7,602 milkings. There were so few samples containing less than 2.5 percent butter fat, and so many more testing from 2.5 to 2.75, that no satisfactory average could be obtained for milk testing 2.5 percent butter fat, so the averages were computed from the ratio of variation of milk testing from 3. to 3.5 percent fat.

It will be seen that as milk increases in fat content it also increases in protein content, but not at the same rate. While milk testing 5 percent butter fat contains twice as much fat as 2.5 milk, it does not contain twice as much protein. In a general way, an increase of 5 percent in fat is followed by an increase of 0.02 percent in protein, showing that rations must be adjusted to the protein content of the milk, as well as to quantity of milk. The sugar content of milk increases from 4.60 in milk testing 3 percent fat to 4.98 percent in 5 percent milk, and then gradually decreases to 4.84 percent sugar in 7 percent milk. The carbohydrate equivalents of the total solids of the different grades of milk range from 14.03 for 3 percent milk, to 24.81 for 7 percent milk. The nutritive ratio of the various grades of milk ranges from 1:4.23 for milk testing 3 percent fat to 1:4.88 for milk testing 7 percent fat. The last column shows the relation of fat to solid-not-fat. In 3 percent milk there are 2.43 pounds of solids-not-fat to 1 pound of butter fat ; in 6 percent milk, 1 pound of fat to 1.45 pounds not fat, indicating that butter fat only is not a logical basis for feeding for milk-production.

The samples of milk taken from cows while on low protein rations are not included in the table, giving the organic composition of milk and relation of the solids, because of a depression of milk solids.

So far, reference has been made only to the relation of the nutriment in the ration to the milk solids in the product. With the information revealed in the table giving the organic composition of the milks of various grades, data is afforded for the study of the relation of the daily crude protein supply, with the protein content of the milk and with the total product returned, during eight years of experimental feeding.



The Relation Between Protein in Feed and Protein in Milk Produced.

Year	Feed	Crude Protein Maintenance	Milk	Protein in Milk	Net Crude protein to 1-lb. protein in milk	Total product daily	Prod. per 100 Lbs. Live weight
	Lbs.	Lbs.	Lbs.	Lbs.	Lbs.	Lbs.	Lbs.
1894–1895	2.00	.67	1.33	.814	1.63	4.495	
1902–1903	1.92	.62	1.30	.793	1.64	4.572	
1903–1904	1.97	.64	1.33	.747	1.78	4.342	
1904–1905	1.92	.63	1.29	.769	1.68	4.428	
Average	1.95	.64	1.31	.781	1.68	4.462	.49
1905–1906	1.63	.60	1.03	.772	1.33	4.427	
1906–1907	1.74	.64	1.10	.803	1.37	4.663	
1907–1908	1.75	.61	1.14	.823	1.38	4.741	
1908–1909	1.86	.66	1.20	.828	1.45	4.752	
Average	1.74	.63	1.11	.806	1.38	4.645	.52

The table gives the daily net crude protein consumed, the protein available for milk production, after deducting the amount calculated for maintenance, the protein content of the milk, the net crude protein calculated to 1 pound of milk protein and total product.

Of the 1.95 pounds daily protein supply during the first four years, 0.64 pound is the protein caluted for maintenance, leaving 1.31 pounds available for milk-production. The daily average protein content in the milk was 0.781 pounds being a return of 1 pound of milk protein to 1.68 pounds of net crude protein in the ration, with a yield of 4.462 pounds of total product in milk solids reduced to a common factor.

It appears from these results that an allowance in the daily ration of 1.5 units of crude protein to 1 unit of protein in the milk would be ample under the conditions that obtained in the Station herd. In view of the fact that all reproductive processes in the living body are stimulated and nourished by the nitrogenous properties in the feed and that there is considerable variation in the composition of feeds and in milks having the same percent of fat content, and since the feeds ordinarily fed to cows are not as uniform or of as fine quality as that used in these experiments, and that cows are ordinarily not provided with as comfortable quarters and handled with the care and strict regularity as was the case with the Station herd, 1.75 units of net crude protein is prescribed for 1 unit of protein in the milk. In 1 pound of milk testing 4 percent, there is on an average 0.0308 pound of protein and for its production there is prescribed for the production of a pound of milk, bear the same relation to the non-nitrogenous components in the milk, being 1.75 to 1, while the ether extract prescribed for 1 pound of milk is 15 percent of the non-nitrogenous components in the milk. The sum of the nutrients prescribed for the production of a pound of milk reduced to a carbohydrate equivalent is 2.02 times the sum of the milk solids in a pound of milk reduced to a carbohydrate equivalent. Ether extract in feed is regarded as 2.2 times as valuable as carbohydrates, while milk fat is given a rating of 2.25. The non-nitrogenous nutrients are not reduced to common terms in the tables because of the great variation in the nutritive value of ether extract and because they are generally given separately in tables of digestible nutrients.

George Vaux the 10th and a pet Guernsey

Meeting of Eastern Guernsey Breeders' Association

Harriton Farm, Bryn Mawr, Pa.

AT the invitation of Miss Mary M. Vaux, about sixty persons, members and friends of the Eastern Guernsey Breeders' Association spent a very pleasant day at Harriton Farm on Thursday, May 21. The customary business was first disposed of, including the election of several new members and accepting an invitation for the association to be present at the Guernsey picnic to be held at Waddington Farms, West Virginia, on June 18.

Miss Vaux then gave an interesting account of the settlement and ownership of this farm rich in historical legends. This is given in detail on page 64 of the December, 1911, issue of the Guernsey Breeders' Journal. In response to an inquiry as to why she became interested in Guernseys, Miss Vaux said the color and flavor of the milk and cream which they had from a family cow, a Guernsey, won her to the merits of the breed.

Miss Vaux has surely collected a very choice bunch of Guernseys. Those who were present and were able to see the animals as they were led out from the stables can testify to this. Her conduct of the farm has been to keep it along the lines of profitable production. The milk being sold as milk to a high class family trade in Bryn Mawr has made it necessary that the herd should be conducted for that purpose. The qualities of the Guernsey has been very pronounced in her herd and has won fame for the products, and she has had at all times a large waiting list.

Many of the animals have been running in the Advanced Register. These have been kept in the stables and treated in the same manner as the rest of the herd. The following records have been completed.

Viola Allen 21818

Sire King Edward of Fairview 8204 Dam Maxine Elliott 3d 16462

Miss Vaux has been a great admirer and a firm believer in the Glenwood strain. She certainly has in Dairymaid's Choice of Pinehurst 13618 a very fine animal. This bull is a full brother to the noted Dairymaid of Pinehurst 24656, and is sired by Glenwood Boy of Haddon 4605, out of Dairymaid of Elm Place 14197. He certainly made a very fine appearance as he was led into the yard together with some of his daughters.

The members of the herd were very favorably commended by all present and attested well to the excellent management they had received at the hands of Miss Vaux.

After a bounteous lunch which was gotten together and served from the products of the farm, Dr. Lipman, the Director of the agricultural experiment station in New Jersey, gave a most interesting talk on soil fertility. He traced the early history of the study of soil fertility, and regarded the soil as a store house of plant food, and the term, soil fertility, as a relative one whose true meaning was the making available the proper proportion of the elements that are needed for the nourishment of the growing crops.

He showed clearly how intricate it is to study these problems and how many different questions are represented to one who endeavors to solve them.

He portrayed the influence which the application of chemicals, rotation of crops, and bacteria had upon the question of soil fertility. He regarded the soil as a laboratory always at work and always battling with the various conditions.

Important Notice

Seventy head registered Guernseys will be sold at auction, Saturday, June 20, at West Salem, Wisconsin. The lot are extremely high-class daughters of Gov. of the Chene, Robert's Boy, Princess Jewell, Raymond's Pearl King, and others. Also, at private sale, a few daughters of Holden IV. and Bob Rilma, the only son of May Rilma, the champion cow of the world.

West Salem, La Crosse County, Wisconsin.

Annual Meeting of the American Guernsey Cattle Club

Held at Hotel Imperial, New York City, May 13, 1914

The meeting was called to order by President Hill.

President Hill: Our meeting will please be in order. The first order of business will be the reading of the call for the meeting.

The Secretary: (Reading)

April 10, 1914.

To the Members of the American Guernsey Cattle Club.

Gentlemen:—

You are hereby notified that the Annual Meeting of the American Guernsey Cattle Club will be held at Hotel Imperial, Broadway and 32nd Streets, New York City, on Wednesday, May 13, 1914, at 10.30 a. m.

Besides the regular business of hearing the reports of the year's work, the election of officers, etc., the following special matter will be presented:

To see if the Club will vote to change Section 8 of the By-Laws so as to read:—

Sect. 8 Transfers.

Every change of ownership must be recorded upon the records of the Club.

It shall be the duty of the seller to file with the Secretary the necessary application for such transfer on the regular forms furnished by the Club.

It is for bidden to transfer to any other person than the actual purchaser. Sellers doing so lay themselves liable to the penalties imposed by the Constitution and By-Laws.

Buyers are warned that the transfer must read direct from the person from whom they purchase the animal.

In case of the neglect or refusal of the seller to make application for a transfer, a record of transfer may be made by vote of the Executive Committee on satisfactory evidence of sale and delivery.

No transfer shall be cancelled except in case of error or by vote of the Executive Committee.

The original Certificate of Entry on which there is a copy of the sketch of the fawn and white markings as filed at time of registration of the animals must accompany the application for transfer. No record shall be made on said certificate except at the office of the Club by direction of the Secretary.

An application for the transfer of a female in calf must state the date of service and name and number of the service bull.

Transfer Fee, in all cases, $1.00. The Club looks to the seller for the payment of all transfer fees.

Failure to comply with these provisions for transfer may be deemed an infraction of the By-Laws, and the offender will be subject to such penalty as is within the power of the Club.

Opportunity will be given for consideration of matters relating to the welfare of the Club and its work.

As has been the custom a blank Power of Attorney is enclosed with this call.

The attention of the members is called to the enclosed notice of the Guernsey Breeders' Conference to be held the evening prior to the Annual Meeting, or Tuesday, May 12.

Per Order of Executive Committee.

Wm. H. Caldwell, Secretary.

President Hill: Before we take up the regular order of business, I desire to say that I have appointed Mr. M. T. Phillips as a committee on proxies, and any person in the room holding proxies, will hand them to Mr. Phillips at this time, so that he may be ready before the election of officers.

The next order of business will be the reading of the minutes of the last annual meeting.

The Secretary: It has been the usual custom to publish the records of the meeting in the Journal of the first issue after the meeting. Those minutes have been published, and they were also, I think, distributed, at least, should have been distributed to the members at that time. I will then, in accordance with the custom of previous years, offer that printed record as the record of the meeting of last year, rather than attempt to read it.

Mr. Tarbell: I move the approval of the minutes.

Mr. Jones: I second the motion.

President Hill: Are there any remarks? Hearing no objection, the minutes stand approved as printed.

The motion was unanimously carried.

President Hill: Mr. Caldwell will be glad to answer any questions of anyone who desires to ask about them.

Before taking up the regular order of business, I have this letter from Mr. Codman. After some personal remarks, he says:

"I am sorry that I shall not be at the annual meeting, but I am just out after being shut up for three weeks with bronchitis, and the doctor forbids fatigue. Regret not meeting old friends and listening to Guernsey topics, but must wait for printed report. Having been present at the birth of the Club, and having witnessed the steady advance of the Guernsey as a dairy breed, no other leading it much, if at all, and seeing how new strains of blood are frequently coming to the top, owing to careful breeding development and attention, with perhaps a little luck also, I feel that we may justly congratulate ourselves on the evidences of our faith when we realize the results already attained, and the increasing appreciation of the merits of the Guernsey cow."

I would like to suggest at this time that, as President Codman has practically never been, if ever, absent from a meeting of this Club, that we send to him the greetings of the Club. I do not believe that that needs a motion; I am sure that you will agree with me that this shall be done, and we will instruct Secretary Caldwell to send a telegram of greeting, and appreciation, and of our love to Mr. Codman.

In coming to this, the Annual Meeting of the Club, I would not want to take but a moment of your time, except that we have not a very great deal of business to do to-day. I think there are one or two things which I should call your attention to as members of the American Guernsey Cattle Club.

With each year's report, as doubtless you will find with this one, Secretary Caldwell has reported a continuous, steady growth, and we sometimes appear to congratulate ourselves on this fact, but I think we should think that it is only the natural order of affairs, and we shall be very much disappointed indeed if there were not this steady growth. He will tell you that this year, there have been entered 3,839 bulls and 5,987 cows, a total of over nine thousand animals entered in this last year. Included in this lot were eleven hundred imported from the Island, which is a larger number than has ever been imported in any one year. Every-

body asks the question, "Where do they come from," and no one can answer. There are 240 more on the sea to arrive in New York Monday. It is reported also that one single individual has 200 head more bought on the Island, to come over in a short time. There is only one thing to do, and that is to annex the Island and take them all, as Mr. Marsh wanted to do years ago.

9,871 transfers were recorded during the year. Just as a matter of information, and leading up to something else, I wanted to say to you that I had my son draft out a number of transfers to some of the leading states, picking out from that what I thought were the leaders. The transfers shown in each case are in addition, of course, to the animals that were imported direct to those states, and show no transfers.

2,550 animals were transferred to breeders in Wisconsin last year.

1,319 to breeders in New York.

1,057 to breeders in Pennsylvania.

A total of 4,926.

As the total number of transfers were 9,871, it leaves 4,945, just 19 more for the rest of the United States than were transferred to those three states. Somebody else ought to get busy.

In the Advance register work, 200 breeders now have cows under test, with 1100 individuals. This is a gross of some 750 over last year. We are glad to say that the work is started in the extreme West and the Pacific Coast has 32 cows under test.

The leading states in this work are: Wisconsin, 255; Ohio, 119; Massachusetts, 106; New York 83; Illinois, 73; Pennsylvania, 72.

This work has brought two new leaders here, that of May Rilma, with a new record. (Applause.) This yield of 1073.41 pounds of fat, beats the world's record for any cow of any breed, in butter fat record, by 15 or 16 pounds. This record is a matter of congratulation for us, and it has been noted by the Associated Press and practically every paper of the United States. A breeder from Pennsylvania said the County papers practically all through his section had noticed the record of this cow and they made reference to it, and that in that way it may be given wide publicity, and give wide publicity for the whole breed.

Jehanna Chene has passed from the three-year-old class by three pounds, graduating with a record.

You perhaps noticed in the last Journal, I think perhaps there was no signature, but I think Mr. Bishop had a hand in it, and he was very careful to see that you should not have any information about a new cow under test, but I don't know why he should keep that up his sleeve, because we ought to know about it. A cow that has previously finished a record of 845 pounds of fat, with her best days of milking 55 pounds, has now milked above 80, averaged 75 pounds a day in milk, and knowing the cow, her previous record, and what she is now doing, and the kind of care they are able to give a cow, nothing but an accident can bar us next year from saying we have another new record that beats them all.

As to new members, the leading states were Wisconsin, 16; Massachusetts, 10; and New York, 4, showing how Wisconsin is leading in all of these departments of the work. You remember that in the census taken three years ago, 1911, the report showed that there were 3,100 Guernseys recorded in the State of Wisconsin. Now, 2500 are transferred to that state in a single year.

I want to say that I believe the large part of this growth of the work in that State is due to the County Guernsey Breeders' Associations. Secretary Caldwell has promised to come out there and attend some of those association meetings next month, and two of them promise a large attendence at a Guernsey picnic in the month of June to greet him. I don't know whether they will make good, but I went to one last year and there were 500 present, and they were just getting started. You don't know what that County co-operation community interest does for booming a breed of cattle. They have 35 or 40 Holstein Association, County and local associations in Wisconsin, and over 30 Guernseys with new ones organizing so rapidly that you can hardly keep track of them, and every one is alive and actively engaged in booming the interest in their counties. Some of them started two years ago with four or five people, and now they have from fifty to seventy-five and one hundred breeders in some of those counties.

This local association work has been taken up in practically only one place in the East, and that is the work our friend Hyde started, I think up in Columbia County, Pennsylvania. I asked him about it last night, and he says they now have 85 men in their county that have started to breed pure breed cows.

What has been done in 30 counties in Wisconsin and in the one county in Pennsylvania can be done anywhere if we just go about it in the right way. There is nothing that will do as much to boom the Guernsey interest as much as the pushing of those local county organizations.

One other matter that I thought might be of interest, looking over the figures, the other day, for the cows now under test—You will read in your new issue of the May Journal that you have just received, a very complete report of all the advance register sires, and in the next issue you will find a similar table of the dams brought down to date, and you will be able to find out how many advance register animals any bull or cow had on the first day of March. Some of those sires have a number of daughters under test at this time. Governor of Chene has sixteen daughters under test; Masher, fifteen; Justinee's Sequel, twelve; Princess Jewell, twelve; Governor of Gree 2nd, eleven, a bull that I find very few of the breeders have heard of. I think there is one at Waddington Farms, and one other of his daughters under test. I don't think the owner would like to have it mentioned, but he thinks she is good enough to beat the two-year-old record.

Galaxy's Sequel, 9; Golden Noble 2nd, 9; Billy France 2nd, 8; Fanny Sequel, 6; the Conqueror, 2nd, 6; Alderney 2nd, 6; Gay Lad du Braye, 6.

Those were Island bulls only and I just happened to have worked out those for another proposition, and I thought those figures might be of interest.

In the report of the Executive Committee, some recommendation will be brought to you regarding the work along publicity lines for the ensuing year, which will include additional appropriations for the National Dairy Show and for slightly increased appropriations of the dairy show at Waterloo, Iowa, and the continuing of the work at Portland, and Framingham.

There will also be brought to your attention work that will be talked about concerning the Panama-Pacific Exposition, and I think that the plan outlined by the Committee will be well worthy of your consideration, and I think an opportunity will be presented at that Exposition to show what the Guernsey cow is to the multitudes of people in a way that has never been undertaken before, not only on the Pacific Coast, but all over this country, and we hope in the Orient.

We will now call for the regular order of business and listen to the Secretary's report.

Report of Secretary and Treasurer for Year ending April 30, 1914.

In presenting this report of my twentieth year of service with The American Guernsey Cattle Club I cannot resist the feeling of satisfaction as I review the work, that the period has been one of constant advancement of the Guernsey cause.

Twenty years ago there were 3322 bulls, 6742 cows in the Herd Register. Today the numbers reach 28,687 for bulls, 50,453 for cows.

In this period the transfers have increased from 950 to 9871.

Membership in the Club has increased from 131 to 591. In 1893, the Club's income was $3300 and there was a debt of $2000. This year our business amounts to $76448.83 and with a present worth of $41,419.56.

The twenty years have been characterized by the establishment of The Advanced Register and The Guernsey Breeders' Journal, two important factors in the advance of the breed.

A commodious and well equipped office home for the club has been earned and established.

The structure thus builded I trust is but a good and firm foundation for what the future may have in store and what the merits of the breed so well deserve.

A report of the year can but only be a recital of facts and figures. Such can best be presented under the four distinct heads which the work of the Club naturally divides itself: The Herd Register, The Advanced Register, The Publicity Work, Financial Statement.

The Herd Register.

The growth of the Herd Register during the year has been very heavy. 7737 sets of folders have been listed during the year, an increase of 600 over last year. This growth has been especially noticeable during the year, an increase of 600 over last year. This growth has been especially noticeable during the latter part of the winter and through this spring.

The following give the figures in detail:—

	Bulls	Cows	Total	Transfers
May, 1913	286	432	718	876

Importations.

The following importations have been made during the year:

May 6, 1913—O. C. Barber, Akron, Ohio, from England 1 Bull—0 Cows. Total 1.

May 6, 1913—F. S. Peer, Ithaca, N. Y., from England 0 Bulls—51 Cows. Total 51.

June 3, 1913—W. P. Cowan, Chicago, Ill., from Guernsey 0 Bulls—2 Cows. Total 2.

June 17, 1913—Mrs. E. W. Strawbridge, Moorestown, N. J., from Guernsey 1 Bull—4 Cows. Total 5.

July 1, 1913—F. S. Peer, Ithaca, N. Y., from England 0 Bulls 7 Cows. Total 7.

July 1, 1913—F. S. Peer, Ithaca, N. Y., from Guernsey, 1 Bull—27 Cows. Total 28.

July 21, 1913—George McKerrow & Sons Co., Pewaukee Wis., from Guernsey 7 Bulls—33 Cows. Total 40.

Aug. 11, 1913—Charles L. Hill, Rosendale, Wis., from Guernsey 1 Bull—59 Cows. Total 60.

Aug. 11, 1913—Charles L. Hill, Rosendale, Wis., from Alderney 1 Bull—17 Cows. Total 18.

Aug. 11, 1913—O. C. Barber, Akron, Ohio., from Alderney 1 Bull —27 Cows. Total 28.

Aug. 11, 1913—Rundell Bros., Livingston, Wis., from Guernsey 0 Bulls—30 Cows. Total 30.

Aug. 11, 1913—Rundell Bros., Livingston, Wis., from Alderney 0 Bulls—16 Cows. Total 16.

Aug. 11, 1913—Lloyd Rundell, Roberts, Wis., from Guernsey 1 Bull—21 Cows. Total 22.

Aug. 11, 1913—Lloyd Rundell, Roberts, Wis., from Alderney 0 Bulls—3 Cows. Total 3.

Aug. 11, 1913—F. B. Buckley, Schaghticoke, N. Y., from Alderney 0 Bulls—1 Cow. Total 1.

Aug. 11, 1913—F. B. Buckley, Schaghticoke, N. Y., from Guernsey 3 Bulls—32 Cows. Total 35.

Aug. 11, 1913—W. W. Marsh, Waterloo, Iowa, from Guernsey 2 Bulls—0 Cows. Total 2.

Aug. 11, 1913—O. C. Barber, Akron, Ohio, from Guernsey 0 Bulls—72 Cows. Total 72.

Aug. 11, 1913—Charles W. Bosworth, Springfield, Mass., from Guernsey 0 Bulls—4 Cows. Total 4.

Aig. 19, 1913—Egbert T. Watt, Burke, Va., from England 1 Bull—3 Cows. Total 4.

Sept. 15, 1913—Lee S. Clymar, Riegelsville, Pa., from Guernsey 1 Bull—1 Cow. Total 2.

Sept. 15, 1913—George W. Ott, Doylestown, Pa., from Guernsey 2 Bulls—86 Cows. Total 88.

Sept. 15, 1913—S. T. Cooper, Chicago, Ill., from Guernsey 1 Bull—5 Cows. Total 6.

Sept. 15, 1913—H. Byron Scott, Grosse Ile, Mich., from Guernsey 1 Bull—1 Cow. Total 2.

Sept. 15, 1913—H. H. Snavely, Willow Street, Pa., from Guernsey 0 Bulls—3 Cows. Total 3.

Sept. 15, 1913—F. S. Peer, Ithaca, N. Y., from England 0 Bulls—1 Cow. Total 1.

Sept. 15, 1913—S. D. Riddle, Glen Riddle, Pa., from England 2 Bulls—5 Cows. Total 7.

Oct. 15, 1913—John T. Dodge, Laconia, N. H., from Guernsey 0 Bulls—1 Cow. Total 1.

Oct. 15, 1913—Kenneth B. Pope, Penacook, N. H., from Guernsey 1 Bull—1 Cow. Total 2.

Oct. 28, 1913—George Wood, Wawa, Pa., from Guernsey 0 Bulls—10 Cows. Total 10.

Oct. 28, 1913—J. L. Hope, Madison, N. J., from Guernsey 1 Bull—41 Cows. Total 42.

Oct. 28, 1913—J. L. Hope, Madison, N. J., from England 0 Bulls—24 Cows. Total 24.

Oct. 28, 1913—W. W. Marsh, Waterloo, Iowa., from England 1 Bull—0 Cows. Total 1.

Oct. 28, 1913—Louis E. P. Smith, Holliston, Mass., from Guernsey 0 Bulls—2 Cows. Total 2.

Oct. 28, 1913—Louis E. P. Smith, Holliston, Mass., from England 1 Bull—9 Cows. Total 10.

Dec. 8, 1913—F. S. Peer, Ithaca, N. Y., from Guernsey 2 Bulls—26 Cows. Total 28.

Dec. 8, 1913—Mrs. Helen H. Townsley, Rapidan, Va., from Guernsey 0 Bulls—3 Cows. Total 3.

Dec. 8, 1913—Albert C. Loring, Minneapolis, Minn., from Guernsey 2 Bulls—12 Cows. Total 14.

April 7, 1914—Frederick Phillips, Villa Nova, Pa., from Guernsey 1 Bull—50 Cows. Total 51.

April 7, 1914—F. S. Peer, Ithaca, N. Y., from Guernsey 5 Bulls—139 Cows. Total 144.

April 7, 1914—Homer F. Rundell, Livingston, Wis., from Guernsey 0 Bulls—31 Cows. Total 31.

April 7, 1914—Homer F. Rundell, Livingston, Wis., from Alderney 0 Bulls—8 Cows. Total 8.

April 7, 1914—Dale E. Rundell, Livingston, Wis., from Alderney 0 Bulls, 4 Cows. Total 4.

April 7, 1914—Dale E. Rundell, Livingston, Wis., from Guernsey 0 Bulls—24 Cows. Total 24.

April 7, 1914—Hiram Rundell, Roberts, Wis., from Guernsey 0 Bulls—3 Cows. Total 3.

April 7, 1914—Hiram Rundell, Roberts, Wis., from Alderney 0 Bulls—2 Cows. Total 2.

April 7, 1914—Wilbur Rundell, Livingston, Wis., from Alderney 0 Bulls—5 Cows. Total 5.

April 7, 1914—Wilbur Rundell, Livingston, Wis., from Guernsey 0 Bulls—3 Cows. Total 3.

April 7, 1914—Lloyd Rundell, Roberts, Wis., from Guernsey 0 Bulls—22 Cows. Total 22.

April 7, 1914—Lloyd Rundell, Roberts, Wis., from Alderney 0 Bulls—5 Cows. Total 5.

April 7, 1914—B. L. Rundell, Hammond, Wis., from Alderney 0 Bulls—4 Cows. Total 4.

April 7, 1914—B. L. Rundell, Hammond, Wis., from Guernsey 6 Bulls—21 Cows. Total 27.

April 7, 1914—Franklin Rundell, Livingston, Wis., from Guernsey 1 Bull—9 Cows. Total 10.

April 7, 1914—Franklin Rundell, Livingston, Wis., from Alderney 0 Bulls—1 Cows. Total 1.

April 7, 1914—W. Biddick, Menomonie, Wis., from Guernsey 0 Bulls—7 Cows. Total 7.

April 7, 1914—Oscar R. Schwalen, Roberts, Wis., from Guernsey 0 Bulls—18 Cows. Total 18.

April 7, 1914—Oscar R. Schwalen, Roberts, Wis., from Alderney 0 Bulls—2 Cows. Total 2.

April 7, 1914—C. Wilkins, Platteville, Wis., from Guernsey 0 Bulls—4 Cows. Total 4.

Membership.

New Members of the American Guernsey Cattle Club Since May, 1913.

Fifty-six members have joined the Club this year as follows:

California: Humphrey, A. B., Meyhews; Dupee, Walter H., Santee.

Connecticut: Dove, John, Litchfield; Kelchner, W. W., Sharon.

Illinois: Hart, H. Stillson, Barrington; Meyer, E. F., Chicago; Sass, Ernest W., Streator; Sass, U. G., Streator.

Indiana: Lieber, Otto R., Indianapolis; Smith, Fred B., Terre Haute.

Maryland: Urie, James W. Kennedyville.

Massachusetts: Ames, John S., North Easton; Barron, C. W., Cohasset; Bosworth, Charles W., Springfield; Codman, Edmund D., Boston; Frazier, Frank P., Ipswich.; Hopewell, John, Natick; Lincoln, Alfred L., Hingham; Loring, Augustus P., Beverly; Mixter, Dr. Sam'l J., Boston; Stone, Charles A., Plymouth.

Michigan: Clark, Glenn, Eau Claire; Sweet, Ernest E., Detroit.

Minnesota: Gambell, F. H., Thief River Falls; Hartley, G. G., Duluth; Stone, George C., Twig.

New Hampshire: Kaolin Farm Company, Merrimack;

New Jersey: Cleveland, Charles D., Eatontown; Jenkins, George W., Morristown; Murpny, Hon. Franklin, Newark.

New York: Craig, Dr. Burdette P., Glen Spey; Seaman, James H., Glens Falls; Vander Beek, Francis I., Glen Spey; Warburg, Felix M., White Plains.

North Dakota: Cooper, James H., Williston;

Pennsylvania: Little, P. J., Ebensburg; Van Wagener, J. B., Pittsburgh.

Tennessee: Memphis Hotel Company Inc., Memphis.

Vermont: Bates, Irving W., East Barre.

Washington, Gile, Albion L., Chinook.

Wisconsin: Bean, J. J., Wausau.

Wisconsin, Bean, J. J., Wausau: Buzzell, Roy C., Stanley; Coffin, W. K., Eau Claire; Florsheim, Sidney E., Minocqua. Larson, George E., Amherst Junction; Lewis, Ray, West Salem; McKerrow, George & Sons Company, Pewaukee; Rundell, B. L., Hammond; Rundell, Lloyd, Roberts; Plowman, A. J., Elderon; Schmidt, Charles, Wrightstown; Stubbs, Alfred I., West Salem; Swan, Frank E., Wauwatosa; Tobey, C. E., Phillips; Wilkins, Charles A., Platteville; Wilson, B. F., Wausau.

Death of Members Reported Since May, 1912.

Hathaway, Mrs. Marion G., Trenton Junction, N. J. Died June 1, 1913.

Mitchell, Ehrman B., Harrisburg, Pa. Died August 2, 1913.

La Monte, George, Bound Brook, N. J. Died October 18, 1913.

McBurney, Dr. Charles, Stockbridge, Mass. Died November 7, 1913.

Maroney, Denis F., Washington, Pa. Died February 2, 1914.

Cabot, Louis, Brookline, Mass. Died February 10, 1914.

Smith, C. Morton, Philadelphia, Pa. Died March 23, 1914.

Resignation of Members Since May, 1913.

Farmer, Wm. H., Mont Clair, N. J., December 20, 1913.
Bond, F. E., Spring House, Pa., February 9, 1914.
Morrell, Edward, Torresdale, Pa., April 20, 1914.

Active Membership List.

Our active membership list shows 435 members, these are classified as follows:—

The change made in the style of publication of The Herd Register during the year will prove, we believe, a great saving to the Club.

Volumes 26 and 27 have been issued in the old form. Volume 28 is the first of the new style and is in the bindery.

An index volume being an index of the first 28 volumes is on the press, and should be very useful for ready reference as well as in selecting names.

The following show the volumes as issued at present time.

Vol.	Pub.	Includes Parts	Bulls	Cows	Advanced Register Bulls	Advanced Register Cows
I.	1884	1–2–3–4	Nos. 1 to 539	Nos. 1 to 1394		
II.	1887	5–6–7–8	" 540 to 1212	" 1395 to 2826		
III.	1891	9–10–11–12	" 1213 to 2220	" 2827 to 4393		
IV.	1892	13–14–15–16	" 2221 to 2861	" 4394 to 5784		
V.	1894	17–18–19–20	" 2862 to 3572	" 5785 to 7080		
VI.	1895–6	21 to 28	" 3573 to 4522	" 7081 to 8962		
VII.	1897	29 to 32	" 4523 to 4937	" 8963 tp 9732

Report of Advanced Register Department

for year ending April 30, 1914.

There has been a steady growth of the Advanced Register work during the past year and some very large records have been made. 463 applications have been received from January 1 to April 24, less than four months. Our list of Class Leaders has seen many changes; only eighteen names have continued in the list throughout the year, 14 of the 35 being new cows. The 35 Class Leaders show an increase in average milk yield of 545 lbs. milk and 28 lbs. butter-fat, reckoned from March 16, 1913 to March 16, 1914.

We have had during the year 200 breeders doing A. R. work. At the close of the year, there are 193 breeders with 1100 cows under test. The growth of the work during the last four years has doubled, shown by the following figures, giving the number of breeders doing A. R. work and the cows under test:

1911—— 93 breeders with 554 cows under test.
1912——122 " " 786 " " "
1913——137 " " 870 " " "
1914——193 " " 1100 " " "

Of this number, 153 breeders with 871 cows are testing on the two day basis, while 46 breeders with 214 cows are taking up the one day test. Some of this increase in one day test work can be accounted for by members of cow testing associations who have wished to enter their cows in our list.

More than half the breeders milked their cows but twice a day, a very few cows, usually only those who are making **large records,** are milked four times daily. The growth has been very evenly proportioned throughout the states that have been doing A. R. work in the past. There have been five new states in the extreme west in which A. R. work has started, and we now have 32 cows in that section under test, as compared with 12 last year. In eight states, we have 816 of the total number of cows under test viz:

Massachusetts	20	breeders with	106 cows
Minnesota	7	" "	48 "
New Jersey	8	" "	60 "
New York	25	" "	83 "
Ohio	8	" "	119 "
Pennsylvania	17	" "	72 "
Wisconsin	47	" "	255 "
Illinois	13	" "	73 "
			816 "

Six hundred forty-four records have been completed during the year. The average milk yield for the year has increased over that of 1913 by about 300 lbs., and the butter-fat decreased 11 lbs. The largest milk yield has been raised for 1914 by 161.98 lbs., and the butter-fat by 5.25 lbs. There is a growing tendency among breeders to enter heifers with their first calf for A. R. records and it takes a goodly number of large records to raise perceptibly the average of 3000 records. Of the 2957 records completed to date, 526 are over 10,000.00 lbs. milk and 25 are over 15,000.00 lbs. milk; 473 are over 500 lbs. butter-fat, and 11 are over 800 lbs. butter fat.

During the year, a world's record in butter-fat production has been made by May Rilma 22761, which exceeds that of any cow in the world. The record for monthly, weekly and daily production of milk has also been broken by Murne Cowan 19597.

Notwithstanding the provision made at the last Annual Meeting for the entering of Grade cows under the head of Meritorious Grade Guernseys, very few of our breeders are evidently aware of this opportunity, and up to the present time, only six cows have been entered.

A complete Advanced Register index of all the cows up to No. 2500, the end of Volume XXVIII., has been compiled in this department and published in the April Journal. Under the automatic system of entering bulls into the Advanced Register, we have, at the present time, 488 bulls that have

two or more daughters in the A. R., and they have been included in our list of Great Sires. This list of Great Sires and Dams has been completely revised and corrected to Mar. 1, 1914.

PUBLICITY DEPARTMENT.

The activities of the Publicity Department have been quite varied in nature during the year.

Guernsey Breeders' Journal.

The publication of the Journal has been, possibly, the chief effort.

While the Journal has been published along lines similar to those of the three previous years, yet an important addition has been made. Commencing with the July issue, the registration of bulls and cows were included. This makes the Journal a complete compendium of the Guernsey work.

It is gratifying to know that even with the increased subscription price the list of subscribers has held its own. Each month it takes an issue of 3200 copies to supply the mailing list and those circulated in response to inquiries about the breed. Total number of paid subscribers in April, 1910 was 1187; in April, 1911, 1860; in April, 1912, 1988; in, 1913, 2045; and in 1914, 2096.

In addition to the paid subscribers a sample copy is mailed each of the new names which appear on the list of transfers during the month.

The receipts from the Journal cover the expenses of publication, and what deficit there might be charged to same on account of salaries, is no doubt well worth the expense from the standpoint of the publicity received for the Guernsey.

Circular Matter.

As in the past, a large amount of our general circular matter has been reprints from what has appeared in the Journal. For our regular folders we have 8-page and four-page ones, which are distributed in connection with our follow-up system and have been quite generally furnished breeders for enclosing in their correspondence. In addition, we have recently put out a 32-page booklet on the Guernsey Grade. Also, a 20-page booklet giving experiences with the Guernsey.

A general folder, taking up the early history, characteristics, work, etc., of the Guernsey, is now being prepared and no doubt will be ready at an early date. From 100,000 to 150,000 pieces of literature have been given out during the year.

Advertising.

Our Agricultural Advertising seems to have been productive of much good, both in the number of replies and their nature. While it is not possible to trace absolute results, the fact that many of the replies ask the question, "Where can we purchase Guernseys," would indicate a live interest.

Our advertising during the past two seasons seems to have been confined to much the same territory, and it might be suggested that this year a larger appropriation be made in order to cover new territory, and try out some other methods of exploitation. It is believed that at least $2500 should be used.

Representation at the Fairs.

The work of the Club at the various Fairs and Dairy Conventions during the last year has been conducted on somewhat different lines than formerly.

A set of transparencies, showing representative Guernseys, was prepared and arranged so that, by the use of electricity, these transparencies might be illuminated. They attracted a good deal of attention wherever shown, and were exhibited at the National Dairy Show and at Waterloo (Iowa) and Maryland Farmers' Weeks.

After that the three cases were distributed and shown in part at Dairy Conventions or Farmers' Weeks in Pennsylvania, Connecticut, Massachusetts, New Hampshire, Vermont, Ohio, Cornell University, Massachusetts Agricultural College, and a set has been loaned to the Wisconsin Agricultural College during the entire winter.

In addition, five sets of fifty lantern slides, forming an illustrated story of the origin and development of the breed, have been prepared and these sets are being loaned to Agricultural Institutions and elsewhere wherever they may aid in extending the knowledge of the good qualities of the Guernsey.

A personal representative of the Club visited the following fairs: Vermont State; Rockingham, N. H.; Brockton, Mass.; New England, Worcester, Mass.; Connecticut State; Queens-Nassau, Mineola, L. I.; Inter-State, Trenton, N. J.; New York State; Iowa State; Ohio State; Michigan State; Wisconsin State; Minnesota State; Kansas State; Oklahoma State; Illinois State; Montana State; and Idaho State. In addition the Iowa Dairy Cattle Congress and National Dairy Show.

Estimates and plans for conducting a campaign along similar lines for the ensuing year have been included in this year's budget. In addition, it seems that special effort should be directed toward the Panama Pacific Exposition. The Club made as good a representation as was possible at the World's Fair in 1893, Pan-American Exposition in 1901, and encouraged to quite an extent a showing of Guernseys at the St. Louis and Seattle Expositions. The Panama Exposition is to occur at a time and in a teritory where all eyes are turned toward the Guernsey. and it would seem very appropriate to make a special effort to have a fitting representation of the breed at this time. The Executive Committee have already considered tentative plans, and a preliminary appropriation is included in the budget.

Financial Statement Ending May 1, 1914.

President Hill: You have heard the report of the Secretary and Treasurer. I think in this connection that you will hear a report of the auditors at this time. The Auditing Committee, of which Mr. Michener is Chairman.

Mr. Michener: Mr. Chairman, Ladies and Gentlemen: The auditors are pleased to make the following report:

"We have examined the accounts of the Treasurer, William H. Caldwell, for the year ending April 30, 1914, and find them correct as stated, with a balance of hand of $4,056.03.

"A certificate of the cashier of the First National Bank of Peterborough, New Hampshire, showing this balance to the account of the Treasurer, is hereby presented.

"We have also examined the accounts of the Finance Committee, and find the total invested funds to be as given, $1,753.37, as shown by the bank books. Signed, Edgar Michener, Henry Palmer, Auditors."

President Hill: You have heard the report of the Treasurer and of the Auditors. What is your pleasure with the Treasurer's Report?

Mr. Tarbell: I move it be received and adopted.

The motion was duly seconded and unanimously carried.

President Hill: The next order of business will be recommendations of the Executive Committee, including estimate of expenditures for the ensuing year.

The Secretary: This is again a mass of figures, but I will give you the summaries and be glad to give any details that anyone may ask for. At this time, it has always been the custom of the Secretary to submit to the Executive Committee his general plan of the coming year's work, and estimate of expenses for the coming year, and after receiving their approval, it is turned over to the club as a recommendation from the Executive Committee. That is what this is.

The estimate of expenses for the coming year amount to $60,500, which you see is practically not quite the net income of this year, taking out the amount of money which we have received for testing expenses, which is simply turned over to the institution.

Of this $60,500, $21,000 will be necessary for the pay roll. That does not contemplate any increase in salaries, except it provides for four or five additional clerks which we have been obliged to take onto the force in the last few months; and also for the sliding scale of the pay of the clerks, who receive the benefit very soon.

For equipment, $500. That includes the supplies necessary for the multigraph, addressograph and adding machines, additional typewriter, and whatever desks or chairs might be needed; a press for the baling up of our waste paper in the office, and a vacuum cleaner for the office and the balance for starting the basis of a library in the building. We have some twenty years or more of files of the Breeders' Gazette, and Kimball's Dairy Farmer, and Hoard's Dairyman, and we feel that, if we can bind and preserve them, they will be very valuable for reference in connection with our Journal work, or in looking up matters in connection with the dairy stock in the future.

For supplies, $2,000; Maintenance, taxes, insurance, fuel, light and janitor service, $1,200; postage, $3,000; telephone and telegraph, $400; express, $600; herd register, $5000.

For the Guernsey Breeders' Journal, the printing, engraving, binding, and matter of contributions for it, a total of $12,000.

Our expenses this year of the Journal were about $10,300 and something, if I remember rightly. It was a little over $10,000, and the receipts from it were $230 odd dollars better.

Under the head of publicity, $2,500, to cover circular matter. Advertising, $2500; $2,000 for special premiums, cups, etc., at fairs, and $1,500 for the booths and representation.

For the Panama-Pacific Exposition, $4,000.

Travel and meetings, $2,300, making a total expense of $60,500.

I would just say a word in connection with this appropriation for the special premiums, etc. Yesterday the committee changed the National Dairy Show from $670 to $1000. The Waterloo appropriation from $100 to $500. Then there is to be $100 given at Framingham, at Portland, Oregon, at Kansas, and the Oklahoma fairs.

This morning, Mr. Barber of Michigan, has very kindly had sent over here a statue of King Bell, his Guernsey bull, He wishes that I should make a statement to the members that a similar one will be offered through the American Guernsey Cattle Club, for the best sire and get at the National Dairy Show under the same conditions that the trophies are given. That is the latest addition to our list of trophies. (Applause.)

I shall be very glad to answer any questions about this estimate, or to go into detail.

Dr. Wood: Mr. Secretary, the appropriations of $100 for the several fairs, does that include all the state fairs which are to receive anything?

President Hill: Those he mentioned are all that are to receive aid by the recommendation of the Executive Committee.

Dr. Wood: I think there were either 154 or 174 Guernseys exhibited at Minnesota last year. I would like to know why we are not entitled to some recognition.

President Hill: The Committee discussed the matter quite thoroughly last year and felt that the wise proposition to do would be to expend that money either at the leading two dairy shows or in new territory. Therefore, we have gone into Oklahoma, Kansas, and Portland where Guernseys are scarce, in the hope of inducing breeders to go there. It is apparently unnecessary to offer special money in Wisconsin, and Minnesota, and Iowa to secure exhibits.

Dr. Wood: If none of the others get it, of course we couldn't ask for it.

President Hill: The idea has been to spend that money, with the exception of those National Dairy Shows, in new territory. I would be very glad if Mr. Caldwell would at this time, in connection with those estimates, and before we take them up as a whole, explain a little more fully regarding the plan of the committee's recommendation for the Panama-Pacific Exposition.

The Secretary: The plan for the representation of the Guernseys at the Panama-Pacific Exposition has been briefly outlined in this manner, and the details will be perfected and some changes made by a sub-committee which will handle the matter, but in general the following plan is suggested:

Plan for Representation of Guernseys at Panama Pacific Exposition.

General Object.

To maintain on exhibition during the entire time of the exposition, a small representative herd of Guernseys. Also to show up the color and character of the Guernsey products, distribute literature and generally advertise the breed.

Exposition Offers.

Mr. Lively, on behalf of the exposition writes: "If the American Guernsey Cattle Club will maintain a herd at San Francisco you will be given such stall and pen room as you may wish. You could decorate this space and banner same in a way that will make it appear as a distinctive and educational exhibit of the Guernsey product, and you could bring out any characteristic which might appear to be of advantage.

"This department will co-operate with you fully. You can have space for your exhibit in the dairy barn building which as you will observe by the plan is built around an open court, and is arranged especially to provide for visitors seeing cattle that are on display."

"The thought of a milking competition between breeds was abandoned more than a year ago and has not been considered in the plans of this organization since then."

"If the breed specimens contributed were in milk this would be sold for the account of the association and would go a good way towards paying the expenses. There would also be a provision allowing the owner to sell his own stock providing the committee representing the association had not effected a sale. The entire matter is a question of detail which can be successfully arranged."

Make-up of Herd.

Solicit contributions from breeders under conditions that the club will pay expenses of transportation and care, that they will keep them insured and guarantee against loss at sale at a less price than that established when the animals are taken.

Management of Herd.

Secure a place in California and ship cattle there this fall with care-takers. Some place conveniently located around San Francisco bay or up the Sacramento river where animals can be boated to and from, would seem advisable. Secure a competent herdsman, one if possible who could do some creditable Advanced Register work with the herd, and providing such other work as is necessary; have the office in close touch and in general direct the work.

The secretary go out in January and see the work properly started, returning the first of April. Then let someone else represent during the spring and summer. The Secretary go back in the fall to be there through the show season, and to close up business matters at the end of the exposition.

Should two car loads one starting from the east and one from the middle states be taken to the exposition, the gathering and shipment is estimated at about $2500.00, cost of care

taker and helpers about $3000.00, circular matter and advertising about $2000.00, leaving about $2500. for travel and incidentals, making a total cost of the years' work $10000.00.

Take from this year's budget $4000.00 and from next year's, $6000.00.

President Hill: You have heard now the suggestions for the appropriations for the next year's work. What is your pleasure regarding them? A very free discussion of any of the affairs would be welcome at this time. I should be glad of a discussion of the wisdom of going into this proposition at San Francisco. Any discussion whatever will be welcome.

Mr. Benham: Mr. President, I move you that this budget as recommended by the Executive Committee be adopted.

Mr. Gill: I second the motion.

President Hill: Are there any remarks? It would seem as if some of you would have some ideas pro and con on this matter. We contemplate spending $10,000 of the club's money, which is more than we ever attempted to spend on any one proposition before. This you realize is in addition to the appropriation that will be recommended, that has been recommended at this time, or $500, not knowing whether they may be or may not be increased later for special prizes at the show period of two weeks which will be in October, 1915. This contemplates the maintenance of this herd there during the whole exposition period from Spring till Fall.

Are you ready for the question? Hearing no comment or questions, I will put it to a vote.

The motion was unanimously carried.

President Hill: The plans and appropriations recommended by the Executive Committee are approved.

The Secretary: I would like to find out how many will be here at lunch. We invite all and hope you will all stay, but in order that the tables may be prepared, I promised to, a little before twelve, let the management know how many will be here. Remember you are all as guests of the club. (Count taken.)

President Hill: The next order of business will be the election of officers, and the Constitution says that this election shall be by ballot, and I would appoint as tellers, Mr. Charles H. Jones and Mr. Edward Van Alstyne. You will prepare your ballots for the election of President for the ensuing year. We should have a report of Mr. Phillips as Committee on Proxies first, however.

Mr. Phillips: There have been 136 proxies filed and they are in the hands of the following persons:

C. L. Hill, 28; William H. Caldwell, 15; S. M. Shoemaker, 12; E. T. Gill, 14; Robert Scoville, 14; H. B. Tuttle, 9; F. B. Benham, 8; W. W. Marsh, 12; F. L. Ames, 7; James Logan Fisher, 6; M. T. Phillips, 5; Dr. Russell, 3; J. L. Hope, 3; Mr. Hickcox, 1; Henry Palmer, 1.

Dr. Wood: Is it necessary to file the proxies before they are taken?

President Hill: Yes. Here is one other proxy.

Mr. Scoville: Mr. President and Gentlemen: Owing to a number of circumstances, our President, Mr. Hill, does not wish to be re-elected at this time, and it gives me great pleasure to present for your consideration the name of a man who has been associated with this Club from its very inception, and who has served on the Executive Committee for over thirty years, representing as he does, the elements who organized this association in 1877, the Philadelphia people, I mean, it seems peculiarly fitting and appropriate to honor him at this time with the presidency. Of course, you know I refer to Mr. James Logan Fisher, of Philadelphia. (Applause.)

Mr. Tarbell: As the Guernsey is the typical dairy cow, it seems to me most fitting that we should have an opportunity of voting for the chief officer of this club for one who represents so well the typical gentlemen, and I have great pleasure in seconding the nomination of Mr. Fisher.

(Applause.)

President Hill: Are there any other nominations?

Mr. Palmer: I move the nominations be closed.

President Hill: I second the motion.

Mr. Scoville: I move that the Secretary cast the unanimous ballot of the convention for the election of Mr. Fisher for President.

President Hill: It has been moved and seconded that the Secretary cast the unanimous ballot of the members of the American Guernsey Cattle Club for the President for the ensuing year, for Mr. James Logan Fisher of Phildaelphia.

The ballot is so cast, and Mr. Fisher is elected, and will take the chair at this time. (Applause).

(Mr. Fisher was escorted to the chair.)

President Fisher: Gentlemen, I thank you very much, and members of the Cattle Club for your courtesy. As a person who has grown up, as it were, with Guernseys around him for a long time, I did not become converted to the Guernseys; I have always loved them. A great many here are in similar circumstances. I have seen them grow in public esteem from when people used to ask, "What shall we do with your calves?" Now, as Mr. Caldwell just told you, he is being asked, "Where can we get people to sell them?" I think we have gone a great way in popularizing Guernseys. Probably most of it is on account of their intrinsic merits, but a good deal is due to some of the people who have been interested in them, and among others, to the gentleman whose picture hangs above me, (Applause) whom I think you will recognize as one who did a great work for the Guernseys. Of course, I could give you many other names, like Dr. King and Dr. Borland, and Mr. Bowditch, who were among those who really started the club, and Mr. Codman, of course; but I think that there are two men, who, in my recollection, and all through the time I have known about Guernseys, were pre-eminently instrumental in bringing the Guernseys to what they are to-day, and they were the two secretaries and treasurers of this club, Mr. Edward Norton, and our present Secretary and Treasurer, Mr. Caldwell. (Applause.) I think that, in looking over the whole matter, there are no two members to whom the club owes more, and to whom the Guernseys owe more, than to those two gentlemen. I thought I would like, in taking this seat, with which you have honored me to-day, to bring before your attention, how much you owe to them. (Applause.) The business, I believe, before the convention is the election of two vice-presidents. The terms that expire are that of Governor Hoard and Mr. Michener. Nominations for those officers are in order.

Mr. Hill: Mr. President, I would like to nominate Governor Hoard and Mr. Michener to succeed themselves as vice-presidents of this Club, and, therefore, I place their names in nomination.

President Fisher: Gentlemen, you have heard the nominations. Are there any other nominations?

Mr. Gill: I move the nominations be closed, and that the Secretary cast the unanimous ballot of this convention.

The motion was duly seconded and unanimously carried.

President Fisher: The Secretary has cast the ballot, and those two gentlemen have been elected.

The next order of business is the election of a Secretary and Treasurer.

Mr. Tarbell: Mr. President, I have pleasure in nominating Mr. Caldwell to succeed himself. It seems almost superfluous to make this nomination, but I suppose we have to do it as a matter of form, and it gives me great pleasure to do it.

Mr. Jones: I second the motion.

President Fisher: Are there any other nominations?

Mr. Tarbell: I now move you that the President kindly cast a ballot to carry out this nomination for Mr. Caldwell as Secretary and Treasurer.

Mr. Jones: I second the motion.

The President cast the unanimous ballot of the convention and Mr. Caldwell was declared duly elected.

President Fisher: Two members of the Executive Committee are to be elected this year, the terms of Mr. Gill and Mr. Shoemaker expiring. It is in order to nominate two members to take their places.

Mr. Bowditch: I move that Mr. Hill be nominated to take the place of Mr. Fisher, and that Mr. Shoemaker and Mr. Gill be nominated to succeed themselves on the Executive Committee.

And at this time, I would like to move that a vote of thanks be extended to Mr. Hill for the good work that he has done while he has held the office of President.

Mr. Benham: I second the motion.

President Fisher: You have heard the motion that Mr. Shoemaker and Mr. Gill be re-elected and that Mr. Hill be elected to fill the vacancy, and that the Club should vote Mr. Hill a vote of thanks for the way he has conducted the office of President. I think that motion probably better be divided: That the vote of thanks should be possibly voted to Mr. Hill first, and then we will vote on the election of the officers. I don't think you ought to complicate it with two motions. If Mr. Bowditch would be willing to have it that way——

Mr. Bowditch: Yes, sir.

President Fisher: It has been moved and seconded that a vote of thanks be extended to Mr. Hill for the manner in which he has conducted the office of President.

The motion was carried amid applause.

Mr. Hill: I certainly thank you, gentlemen, and I appreciate it very much. I have enjoyed the honor that came to me as President of the Club.

You will remember that when I was elected two years ago, I said I was in favor of a very short presidency for the Club, as far as I was concerned; and I thank you for this vote of appreciation.

President Fisher: Now, the question before the house is as to the election of these three members of the Executive Committee to fill the three vacancies, the two that expire today, and the vacancy caused by the election of your new President. I was going to say that I understood Mr. Bowditch merely divided his motion, and that, therefore, Mr. Bowditch's first motion is now before the house, which was duly seconded, nominating the three gentlemen, Mr. Gill, Mr. Shoemaker and Mr. Hill to fill the three vacancies. That was seconded. I don't know whether there will be any other nominations. If there are, they will be in order if the house sees fit to make others.

Dr. Russell: Mr. President, we cannot afford to dispense with the services of any one of those three men. I move that the nominations be closed and that the Secretary be instructed to cast the unanimous vote of the Convention for those three gentlemen.

The motion was duly seconded and unanimously carried, and the Secretary cast the ballot.

President Fisher: The Secretary has cast the unanimous ballot, and Mr. Shoemaker and Mr. Gill have been elected to succeed themselves, and Mr. Hill has been elected to fill the unexpired term of the vacancy created today.

The next order of business is the appointing of an Auditing Committee. The Committee consists of two members who have acted in the approval of the members of the Club for a long time, and I would like to re-appoint them: Mr. Michener and Mr. Palmer. They are appointments by the chair, and therefore, I re-appoint them to-day.

The Committee on New Members, Mr. Bowditch, Mr. Gill and Mr. Reitbrock, composed the former committee. I re-appoint those gentlemen on that committee.

The next thing in order is new business; but before that is taken up, I believe Mr. Marsh wishes to make an announcement, and I would request him to make it at this time.

Mr. Marsh: Mr. President, Ladies and Gentlemen: At our meeting in Chicago, with Mr. Scoville and Mr. Caldwell, I was appointed a committee to secure a portrait of Governor Hoard to be hung in a room which is set apart for us in the Saddle and Sirloin Club. This idea suggested when we realized that the great National Dairy Show was on a firm footing, it had probably adopted Chicago as its final point.

The Dairy world has been slow to recognize what the beef people have long since had as a regular work, and that is the preservation of knowledge of the personal men who have done these things in the beef world. I don't know whether this audience will realize or not, but the faces of Booth and Bates and Cruickshank and Barclay and Collins, among the Shorthorn breeders, those faces are as well known as are the contemporary breeders, because for over a century it has been the work of the men devoted to that industry to see that the men who had accomplished great things were properly known and that their faces were handed down. And in the Saddle and Sirloin Club in Chicago, there is a Shorthorn room where those portraits are hung, and where from all over the world men go to it as a shrine to do homage to the men who have accomplished so much in the great beef industry. And this is true of the great beef breeds. They have preserved, so as to familiarize the faces of the men who have done things in that particular breed. This is really epoch-making among the men of the dairy world, and it is fitting that Governor Hoard's portrait should be chosen to hang in that room, where will be admitted from time to time those men who distinguished themselves in the great dairy world. The portrait which hangs before you now is the work of an artist by the name of Niome. He has done much of the work that hangs in the Saddle and Sirloin Club, much of the creditable work.

With the presentation to this club of the portrait to-day, it is but a step in what we propose to do, because at the National Dairy Show this fall, this portrait will be formally hung, and the life work of Governor Hoard will be reviewed by somebody competent and worthy of that honor.

I think there is nothing more that I can say, except this: that it would be a just tribute to the life services of this very devoted man if the Guernsey world were well represented at Chicago this fall on this occasion. And the Saddle and Sirloin Club, which is essentially an animal husbandry organization, will be open to all the members, or all the lovers of the Guernsey breed of cattle during that exposition.

I hope, gentlemen, that we will have the pleasure of seeing you all there, not only all that are here today, but many hundreds of others who are lovers of the Guernsey breed of cattle, and recognize the stupendous work which Governor Hoard has done.

I thank you. (Applause).

President Fisher: I believe there is no motion before the house, and, although as I noticed just now, the ordinary course would be to proceed to new business, there are two committees that I think the chair should have appointed, and for which I hope you will excuse the chair for not having done. I will do so now.

One is the Round Table Committee, so called at the dairy show. I will appoint the same committee that has shown such skill and added so much to the comfort of all who have been in there. I believe that committee is Professor Russell, Mr. Baker, and Mr. Rietbrock. I re-appoint them.

There is a new committee required to be appointed for the Panama-Exposition. Mr. Scoville has been out there and looked over the ground and knows possibly more about it than anyone else. The Executive Committee decided that there was to be a committee of three. I would like to appoint on that Committee Mr. Scoville, Mr. Hill and Mr. Shoemaker. (Applause.)

New business now being in order, anybody who would like to bring up anything new before the house, can bring it up at this time.

Mr. Scoville: Mr. President, I believe there is still one matter on the call, the adoption of the amendment to the By-Law, but do you wish to act upon that now?

President Fisher: I should think it would be in order to act upon that now, and, therefore, I think Mr. Scoville's point of order is well taken, and we will at present act on the By-Law instead of acting upon new business.

The Secretary will please read the proposed change.

The Secretary: Reads resolution as given in the call.

Mr. Scoville: Mr. President, I supposed this matter was going to be explained by the Herd Register Committee, but at the last minute, they disown the responsibility for explaining it to you. This is really a very simple change but it involves re-writing of the entire By-Law covering transfers. The other By-Law was somewhat too short and a little bit confusing. The new one is probably somewhat too long, but enough to make it perfectly clear, if it is carefully read.

As a matter of fact, we have unearthed a custom which has in some cases led to trouble among people who are rather active in dealing. They have bought and paid for animals and allowed them to remain in the name of the owner, taking sometimes a blank transfer form, or a transfer form signed with the name omitted. We are not particularly anxious for the one dollar fee which we incidentally lose, but we find that with these blank transfer forms out, the original owner has lost control of the transfer which he certifies to, and the ultimate purchaser has lost a certain amount of protection, to which he is justly entitled. We are trying to prohibit that practice, and we are trying to do it by warning the new purchaser, the ultimate purchaser, he must look to the man he actually bought the animals to sign transfers to him. That is the effect of this change in the rules. I doubt if it is necessary to spend much time on it, but I am sure that the member of the committee can answer any question that may occur to anybody in regard to it.

Mr. Cleveland: There is one slight change I would suggest in the wording, in the seventh paragraph. It does not go to the merits, but simply goes to the language, it reads approximately as follows:

"The original Certificate of Entry on which there is a copy of the sketch of the fawn and white markings as filed at the time of registration of the animal must accompany the application for transfer. No record shall be made on said certificate except at the office of the Club, by direction of the Secretary."

I move that the words "fawn" and white be stricken out, and the word "markings" be left there only, as Guernseys do not all have fawn and white markings.

Mr. Scoville: I raised that point myself, but it was left in there for the sake of uniformity. "Markings" is more precise and more correct. I believe the Committee will accept that amendment without any discussion.

President Fisher: Does the chair understand that that has been accepted and the word "markings" is to be substituted in the original?

Mr. Scoville: The words "fawn and white" are to be stricken out.

President Fisher: And just the "markings" left?

Mr. Hill: I think "color markings" more completely covers that.

President Fisher: Am I right in thinking, therefore, that the amendment is not accepted? That there is a difference of opinion in the committee in regard to it?

Mr. Scoville: Not a very serious difference.

Mr. Hill: I should think "color markings" would be more proper.

President Fisher: Then I understand it stands simply "markings?" The Secretary will please read it then as it stands.

The Secretary: Shall I read the whole of it?

President Fisher: No, just that one part.

The Secretary: The one part is, "The original certificate of entry on which there is a copy of the sketch of the markings as filed at the time of registration of the animal must accompany the application for transfer."

President Fisher: Is there anything further that anyone wishes to say on this subject?

Dr. Wood: Why not say "color and markings" instead of saying any particular color.

President Fisher: Do you offer that as an amendment?

Dr. Wood: I offer that as an amendment.

President Fisher: Has that amendment been seconded?

Mr. Tarbell: I move the adoption of the amendment as amended, Mr. President.

The motion was duly seconded.

President Fisher: It has been moved and duly seconded that the adoption of the amendment as amended be accepted. Is there any further discussion on that?

Mr. Bordon: Wouldn't this require that all animals be registered? There are quite a number of bulls which have been sold which they do not care to have registered. Would-not that require all animals to be registered?

President Fisher: No animal can be transferred unless it is registered.

Mr. Bordon: Doesn't that require them to register?

The Secretary: Mr. President, in answer to that, I would say that the first and basic operation of everything is the registration of that animal. Until that animal is registered, and we have the facts and data on our books, we haven't any jurisdiction over it, and I do not think that the point that is raised by the gentleman would be necessary to be considered in it.

Mr. Bordon: I beg your pardon, but I thought that this committee had the right to make a transfer in any case where an animal was sold, does it not?

President Fisher: No, sir. As the chair understands it, the present practice has been that sometimes a dealer or some one who did not intend to keep the animal has come to a farm and bought an animal, and then afterwards sold it and transferred it, and the transfer has been made to the dealers purchaser, not to the original owner, and the transfer asked to go to that second purchaser. In the meantime, the original owner has lost control of the animal, and knows nothing, whether the actual animal he sold went to the second person or not, or whether, through carelessness, it might have gotten mixed with some other animal. This, as I understand it, is to correct that, but, of course, it does not refer to anything but registered animals. No animal can be transferred on the books of the Club unless it has already been registered; and if any owner has not registered his animals, he cannot sell that animal to anyone promising that it should be transferred, for it cannot be done. It has first to be registered.

The Secretary: I would like, Mr. President, to make one further explanation. The one clause which the gentleman asks about, viz, the Executive Committee have the power to vote a transfer. That is put in to simply cover such an emergency as happened not long ago, where a party owning some

Guernseys left this country, went to England to live, moved from this country and left his cattle in the hands of some one on this side, and later they were sold. It was impossible to get at this party in England—for what reason, I don't know, but it was impossible to get at him, and upon evidence of the sale and delivery, and the checking up of the animals, the transfers were voted under certain conditions.

Now, this By-Law simply gives authority to the Executive Committee to handle such a case as that.

Mr. Jones: To satisfy the gentleman, I understand the Club claims no jurisdiction whatever over animals not registered. They can be bought, sold and delivered regardless of any interest of the Club.

President Fisher: I understand that is correct. If anyone thinks that is not correct, I would be very glad to hear from him. I think that is perfectly correct. I would like Dr. Wood to state his amendment to the amendment again.

Dr. Wood: Simply state "color and markings." The amendment did not mention color. All animals are not fawn, but they are of some color.

President Fisher: Dr. Wood, I would think that color was a marking, and if you wish to make that amendment, you better possibly say "color and other markings."

Dr. Wood: I accept the suggestion, "color and other markings."

Mr. Fisher: If you wish to bring that idea before the house, I think that would make it correct.

Mr. Hill: I second the amendment.

President Fisher: It is before the house to amend the amendment and insert "color and other markings," instead of simply "markings."

Mr. Van Alstyne: Aren't you confusing the issue when you say "color and other markings?" It seems to me that Mr. Hill's suggestion covers the point, if we are going to amend the amendment to "color markings." That covers all markings; that is, all markings on the animal as to color, whether fawn or red or what not, and emphasizes what the amendment as offered does not emphasize, something else besides fawn. If we are going to amend at all, let us make it clear and definite. It seems to me, Mr. Hill's suggestion ought to be adopted, and if it is in order I would move the word be "color markings."

President Fisher: Does the Doctor accept that suggestion?

Dr. Wood: I do. It covers the matter.

President Fisher: Then the motion before the house, instead of putting what was originally proposed by the Committee, it should be changed to "color markings."

I believe that has been moved and seconded.

Upon a vote being taken, the motion was unanimously carried.

Mr. Tarbell: Mr. President, I think it would be well for the Secretary, before you get off from that subject, to read the proposition before the house. It says the original certificate of entry on which there is a copy of the sketch of the fawn and white markings as filed at the time of registration. You cannot change the markings of the original certificate as filed.

Mr. Scoville: That is a perfectly good point.

Mr. Tarbell: I don't see why they want to raise any question that will add anything else.

Mr. Jones: I would like to ask the Secretary if the color of the animal is not required to be shown when the application for registry is made. There is a place for it on the blank, and I have always filled it out. I would like to know if it is necessary to fill it out, if it is not required by the club.

The Secretary: It certainly is.

Mr. Jones: If a blank is sent in without the color, you would send it back?

The Secretary: Immediately.

Mr. Jones: I cannot see any occasion to amend the proposition of the Committee. If the color is specified and the marks are given on the transfer, I don't see but what we are wasting time without accomplishing anything.

President Fisher: Mr. Marsh, have you anything to say?

Mr. Marsh: I was going to suggest that we proceed to vote on the suggestion or amendment of the By-Laws as read.

Mr. Scoville: Amend it by substituting "color" for "fawn and white."

President Fisher: My understanding is it was first amended by you to strike out all of the matter except "markings," and you left "markings," no reference to color. That has since been amended to include the word "color markings."

Mr. Scoville: I can save your time in taking one vote by accepting that.

Mr. Jones: It has been adopted.

President Fisher: It has been moved and a vote was taken on it, and it was adopted, but exception was taken to it, because it was thought to conflict, and it was asked that the whole resolution should be read. Wasn't that your request?

Mr. Tarbell: I understood that the amendment as it went through, included "other markings," but I must have misunderstood it. If it is simply "color markings," I think it covers, and now a motion to adopt the resolution as amended would be in order.

Mr. Scoville: I second the motion.

President Fisher: I understood the motion as amended had already been voted on, but if there is any doubt upon it, I will put it again. I don't think the actual aye and no vote had been taken before Mr. Tarbell made his suggetsion. I therefore put the question now as amended, and as it stands now, "color markings" are the terms used.

The motion was unanimously carried.

Mr. Tarbell: Mr. President, in view of the constantly increasing value of the records of this Club, I would like to ask if there is any possible question about the vaults in which they are kept being absolutely fireproof.

President Fisher: Mr. Caldwell, will you answer that question?

The Secretary: The vaults that are constructed in the office were constructed in accordance with the specifications and conditions, and have the doors that are approved by the—I don't know what to call it, but the official Board of County Record Buildings for the State of Massachusetts. The vaults were constructed in this manner: Two courses of brick laid in cement mortar. Inside of that, they are lined with a terra cotta tile set in cement mortar, and cement mortar plastered on same. The vault doors are the regular doors prescribed for the County record vaults in the State of Massachusetts. It seemed to the architect and those who were associated with me in the construction of the building that we had taken every precaution. As it is a wooden building, not a masonry building, if there was a serious fire, it would be a quick fire and soon over, and that the vault undoubtedly would not be harmed. We took every precaution that we could.

I wish to add this: I cannot conceive of how a very serious fire can be started in the office building outside one thing, the matter of electric wires, and I took the precaution of puttnig all the new wires in pipes. The old wires were carefully gone over by the State Inspector for electrical wiring for the State, and if a fire should start in the day time, we are there. At night, there is the town watchman going past the building every few minutes; the janitor is rooming in it, and there can be at least a dozen lines of hose laid onto that building in very short notice, and we are not more than one thousand feet from the fire engine house, and there is no building in

close proximity to it. There is no building less than forty feet from us.

Mr. Tarbell: I judge from what you say that it is your opinion that if the building should burn up in any quick fire, the vaults would be fireproof?

The Secretary: I have that feeling.

Mr. Tarbell: I think that is very important.

The Secretary: There is nothing on top. The vault goes up the two floors, the basement vault, and the regular main office floor vaults. There is not a vault in the third story, which I very much regret. We did not have foresight enough to construct it. We thought we had ample room without finishing off even the attic. We were going to use it as a storeroom, but it is now the publicity room, and we have commenced even to stand a second row of desks, on the main floor of the office building, but there is nothing on top of the vault in the second story that is of any weight that would in any way hamper or cause any inconvenience in case of a fire. I think there are some gentlemen here who have been in the office, and I wish you had all been there, and I think it is as light and nice and carefully constructed a building as you could get.

I would like to add this, the building was constructed like the letter L; there are two buildings, what was the barn and the main house. It left this triangle or rectangle space. That was filled in. In this new part of the building, we put in what is called fire stops, every three feet, in the uprights between the studs. If there is a partition fire, we have every opportunity to prevent it spreading, and to get at it.

Does that cover your ground?

Mr. Tarbell: Yes. I take it that there are no records kept that are important outside of your vaults?

The Secretary: The active card list, breeders' card list, from which we get the names and the transfer record, is kept in a safe outside of the vault. The current applications, that is, the ones for the very recent volumes, are kept in another safe outside the vault. It would be impossible—I say impossible, it would be very inconvenient,—to have those inside the vault to have to go in and out to refer to them, and there are too many of them to take them in and out on trucks. Inside the vault are cases where the older applications are held. The safes, one is the Herring Hall, and the other is Mosler. They are safes that I inherited with the office, but they are very good, and well constructed safes, and we have felt that they are perfectly safe in holding the papers there. We must get those papers out in the light.

I would say that a complete set of the Herd Register is kept in the vault, and all business matters, financial matters, and such things are kept inside, so they are very well protected.

Mr. Tarbell: I would simply like to add that it is usual to have filing cases, and in a matter of this kind, where the interests are so diversified, I wished to bring up the question as to whether or not the records that were at all important were properly secure in fireproof vaults or filing cabinets; and if that is done, that is all that it is necessary to do. I simply wished to bring it to the attention of the Secretary of the Club.

President Fisher: It appears to the Chair that that was a very good point to bring up. Has the Secretary said all that anyone else would like to have said in explanation about it. Are there any further questions that you would like to ask?

Is there anything else someone would like to take up?

Mr. Cleveland: It is my duty as Secretary of a new Guernsey Association, under new business, to report the fact of the organization. New Jersey has just organized a Guernsey Association. Mr. Larougue is vice-president, myself as secretary, Mr. Hope, Mr. Wright and Mr. Haskell on the Executive Committee Board with the officers. We find there are about eighty-five breeders in New Jersey. A call has been issued to them. We propose to co-operate in our advertising and publicity, and I think perhaps in a year or so, you will find more active breeders in New Jersey and more new members for the Club.

President Fisher: Everyone here I think has been very glad to hear that report, and are looking with interest to hear what may be said at the next meeting.

Mr. Scoville: There is a matter which a good many members of the Executive Committee have for some time wished to bring before this Club, but for reasons which will occur to you as I explain it, they have felt some delicacy about approaching it.

It seems to me—I am speaking personally because this matter has not been considered by the committee. It seems to me that this is perhaps a fortunate and an opportune time to bring this matter up, because it will probably be subject to less danger of being misunderstood now than it might be at most any other time.

I think the very, very flourishing condition of our organization is not only a great source of satisfaction to us all, but I think with that satisfaction, there goes a very cordial and a very hearty recognition of the spelndid part which Mr. Caldwell has played in bringing that about. Now, that is preliminary to what I wish to say in this way: The history of all these organizations is this: They are formed by a group of men around the table, deciding that some movement, the movement in which they are interested, required an organization. One, generally their senior, is chosen as president, and another is selected as secretary, upon whom, in the course of events, develops the management of that organization. As things grow, the duties of the secretary become so burdensome that they can be no longer assumed in the form of voluntary work, and a paid secretary is the natural order of events.

It has seemed to some of us that this paid secretary should not be considered an elective office. There are reaosns, there may be reasons some time in the future, when it would be very desirable to have the Secretary on the basis of an employed member under the definite control of the Executive Committee, and appointed by them, instead of elected by the Club. As I say, at this time, particularly at this time, I am free to make that objection because we know that there is nothing but the most cordial feeling toward Mr. Caldwell, and I simply want to give warning that if the Committee concur, there will probably be a clause in the call for the next meeting at Chicago covering an amendment to the Constitution or By-Laws, as the case may be which would make this provision. I am making this announcement now, in order to forestall the reflection which might possibly occur to some one that there was some ulterior motive in this action.

President Fisher: Are there any remarks? There is no motion. Mr. Scoville did not make any motion.

Mr. Jones: Mr. President, I have often wondered why the usual course of such matters was not carried out in this club. Of course, you have all been very content in the Club. There has been no objection. But it is usual, and undoubtedly is in accordance with good business practice to have a secretary who draws the salary of one of the officers or one of the employes of the Club, under the control of the President and the Executive Committee. I think, for that reason, to prevent any possible friction or any division of the Club into factions at any time voting against an executive officer not in harmony with the policy of the club, I think it would be very desirable that the By-Laws be amended in that way, and that, at the proper time, such a change must be made.

Mr. Van Alstyne: Mr. President, I agree with Mr. Jones. I think you will find in the majority of organizations of this kind, the secretary is elected by the members of the Associa-

tion rather than by the Executive Committee. And on principle, I think it is undemocratic. One of the things that has delighted me in the rather brief time that I have been a member of this club has been the democracy of the club. I believe that this change will be in the other direction. I can see the advantages, to be sure, but I believe that the club may be safely trusted to elect their secretary, who shall then be responsible to the club as a whole, and not to the executive committee alone. You can talk this very freely now, because there is no possibility of the thought of any personality in the matter, and I can conceive a situation—it ought to be clear to every member that in the process of time we might have an Executive Committee who perhaps represented a little coterie, not the sentiment of the Club, and so if you put into the hands of those men the power to elect a man or to appoint the man, who, after all, as we have seen in the past, is the very lifeblood, the bone and sinew of the club, and so I am opposed to it in principle. I believe we would be making a mistake. While I am on my feet, I want to say this, that while I voted for all the officers who were elected today, I do not like that way of doing it. It is not democratic. The rank and file of the members of this club, while they might have had an opportunity, but they did not feel like exercising it in voting for the officials we have elected to-day, they might have voted for someone else, and I hope in the future, this course will not be followed, and that, instead of having the officials cast a ballot, however worthy the candidate may be, I think it should be done in the regular order, and give every member an opportunity to vote, even if there is only one candidate in nomination. Anything is better than to have an informal ballot, because you give an opportunity for a few people to control.

I hope you will take that in the spirit in which I have given it. (Applause).

Mr. Marsh: I heartily approve of Mr. Van Alstyne's suggestion. The Executive Committee should be elected by ballot, but the other question to which Mr. Scoville has called the attention of the Club, I want to briefly make a suggestion. I think that, when you consider the matter, Mr. Scoville's position is absolutely unanswerable and unassailable. It is unfair to the secretary and treasurer, who acts under the direction of this Executive Committee, and who studiously and courageously follows the policy of the Club mapped out by that Executive Committee, to come to an annual meeting every year and wonder whether he is going to hold his job or not. (Applause.)Basically, the efficiency of the office is harmed by our present method of electing, and Mr. Scoville was absolutely right. There is not anybody on this committee that has not only learned to think of Mr. Caldwell as a necessary part of the machinery of the club, but outside of all that, they love him.

This thing was not only prompted on the ground of good business, it was prompted by the fact that we do not want him coming here every year wondering whether you are going to turn him out, because he has absolutely done as the Executive Committee required him to do. You have recourse absolutely, you have the right to turn us fellows out, and when you have the right, it does seem to me that with all the knowledged that we have of what this man is doing, of how capable he is following his work, that that position should be filled by those men who appreciate it, and before the man comes in here in fear and trembling that you are going to refuse him his job. Mr. Caldwell has not been in that position to-day, but I say to you that when he was following the orders of the Executive Committee and was conscientiously doing its work, that he did know what was going to happen in the annual meeting.

Another matter, suppose you had a hand-shaking secretary who neglected his business. and if after 365 days of constant touch with the man, knowing his incompetency except as a vote-maker, wouldn't you think the people who had the knowledge would be the ones who would be the proper persons to handle the hiring and discharging?

Mr. Van Alstyne: If I may be permitted and pardoned for saying another thing on this, I think the very argument Mr. Marsh has offered answers itself. I question whether the Secretary our present secretary, has ever lost any sleep about his being retained in his position, and I think he or any other man never would so long as he exercised the duties faithfully, as faithfully as he has done, and the hand-shaking secretary might be popular for a little while, but it would be very evident that the members would soon get on to that sort of a thing. It seems to me it would be much better for the Executive Committee, in order to eliminate that kind of a secretary, to turn it over to the members and shift the responsibility over and have it handled by a good many rather than to eliminate a man with whom they were in close touch. I think it would be easier for them.

Mr. Jones: Mr. President, I do not think we ought to drop this right yet. I think it is a matter of business practice and a matter of principle. I agree with Mr. Van Alstyne entirely as to the advisability of having the club democratic to the greatest possible degree, and I think we all ought to exercise our privilege to make nominations whenever we see fit, for the directors, from the floor. That is, if any of us think a better man can be selected than has been nominated. I think we ought to exercise our privilege freely, and not refrain from nominating a man who would be a better man. But there is not any question at all about the fact that the President and Executive Committee of this Club are supposed to run it. They are supposed to know more about the detail of its management and about its affairs and the efficiency of its secretary, and about the policy of the club as to expenditures than the mass of the membership as individuals. The suggestion has been made, had not occurred to me before, about the hand-shaking secretary, but since that has been made, it has occurred to me this way: I have frequently in traveling among Guernsey breeders, heard little criticisms of our secretary when I knew he was not properly subject to criticism. I knew he was doing his duty and splendidly. If a man did not get his transfers right off, he said, "How does it happen that you fellows down East get your transfers right away and we out in the West have to wait for ours?" A traveling secretary can go around and by whispering in their ears, can make himself solid with the membership, if he is that kind of man; but the Executive Committee are responsible for the proper business management of this club, and they know whether he is an efficient business secretary a whole lot better than the rest of us. If I were president of a business organization, and the stockholders, the directory, were going to elect the people along with me, I would not serve, because if I am the executive head of a business, I propose to carry out the policies that I feel are to the interest of that business, and if I am going to be hampered, they have got to get another president.

That is the whole question, whether we propose to have the most efficient business management, or whether we propose to open the channels for quarrels and factions and personal differences to interfere with the management of the club.

I will stand back of Mr. Van Alstyne any day in nominating officers from the floor. There has been a time in the organization when I felt like doing it alone. I exercised the privilege of nominating from the floor, and I shall do it again at any time when I feel it is best to do it; and I will support him or anybody else in getting the freest expression of opinion from any members of our Club. (Applause.)

President Fisher: Is there anyone who wishes to make any further remarks on that subject?

Mr. Scoville: I am very glad that we have had this little discussion, and I think it will come to Chicago in good form. At that meeting we will have a little material on this particular subject which will probably be of interest, showing the experience of some other organizations along just exactly these lines.

President Fisher: Has anything else been left to be said about this matter which Mr. Scoville has brought up? Is there any other subject that anyone else would like to tell us about?

The Secretary: Mr. President, if there is no other business to come before the meeting, I would like to make the customary announcement, that the American Guernsey Cattle Club are very glad to have you all at the luncheon which they have provided for which will be served in the Palm Room immediately after adjournment. The time was set for the lunchion at one o'clock, practically as near that time as we adjourn. We have ordered eighty plates, and we trust you will all attend.

Mr. Tarbell: I move we adjourn, Mr. President.

Mr. Hill: Seconded.

Report of Meeting of New York Guernsey Breeders' Association

The thirteenth regular annual meeting of the New York State Guernsey Breeders Association was held at the Hotel Imperial on May 12, at 3 p. m.

The meeting was called to order by its president, Dr. James E. Russell.

The Secretary-Treasurer's report was read and adopted.

President Russell stated that he had received a number of requests from members of the association, also from members of the American Guernsey Cattle Club who were unable to be present at the afternoon meeting, to have Capt. Cassatt's address on the feeding, breeding and care of May Rilma, deferred to the joint session of the N. Y. G. B. Ass'n and the A. G. C. C. in the evening. A motion to the above effect was made and carried.

The following officers were elected for the ensuing year:—

Pres., Edward Van Alstyne, Kinderhook, N. Y.; Vice Pres., J. G. Sherman, Greenwich, N. Y.; Sec.-Treas., Ivan Steiner, Ossining, N. Y.; Ex. Com., Dr. James E. Russell, Peekskill, N. Y., W. R. Dunlop, Fayetteville, N. Y.

The Sales List Committee submitted the following report:

At the meeting of this association held in New York City in May, 1912, it was resolved to undertake the preparation of a Sales List. In July of that year, the undertaking was started with a subscription of $69 received at the meeting, and payments for advertising received to July 30. From this to January, 1914, the list has been maintained on a paying basis. Advertisements have been carried continuously in the Rural New Yorker, Country Gentlemen, Hoard's Dairyman, Guernsey Breeder's Journal, Practical Dairyman, American Agriculturist, Kimball's Dairy Farmer and for shorter periods in the Penn. Farmer, New York Farmer, Farm Journal, Tribune Farmer, Farm Enterprise and Southern Ruralist. The notice has been before about 500,000 readers every week for two years. The result has been a very heavy demand for our Sales List and a corresponding demand for cattle from the State of New York. In some respects, the success has been too great. Breeders of pure bred or grade Guernseys found it easy to sell all they had to offer and at present feel that such advertising is unnecessary. Inquirers, too, have often been disappointed in not finding enough stock for sale as the stock had been sold prior to their inquiry being received. The consequence was that we began to look about for more offerings. This meant going outside of the state, but neither the Eastern Breeders' Association of Philadelphia nor the New England Breeders cared to merge their name with ours as it would mean a distinct loss to them. The issuing of the Sales List has been temporarily abandoned although the list has been sent to all inquirers up to April last. After the payment of all expenses, there remained a balance of $9.16.

A general discussion of the subject to continue issuing the Sales List followed. The average of the opinions and views expressed by the members was that they found the Sales List of great value in disposing of any stock (excluding animals having a very high value) that for the money invested no other form of advertising gave greater results and that the Sales List might be published quarterly instead of monthly or every two months as heretofore. Some members guaranteed their subscription even though they had no stock to sell, but were assured by doing so that they were aiding in the distribution of Guernsey cattle and attracting the attention of buyers to the state of New York. The motion was made and carried to recommend to the new officers to consider the publishing of the Sales List on a quarterly basis, empowering them to go ahead with it if best. The officers of the association met on the following day and decided unanimously that the Sales List be published and to take immediate action necessary to do so.

May Rilma's Son Burned

Just as our forms are closing the information is received that Mr. Charles Hornburg of Ira, New York, has lost his barn by fire, and Bob Rilma, who is well known on the fair circuit as well as being the son of May Rilma was burned to death. We understand also that Mr. Hornburg received serious injuries.

Eastern Guernsey Breeders Association Cup

The Eastern Guernsey Breeders' Association around Philadelphia offers a cup each year to that cow bred and owned by a member of their association who will make the best record in the Advanced Register. This cup was won for the season of 1913 by Mr. J. L. Hope, Florham Farms, Madison, N. J., with the cow, Lady Lesbia 25142, A. R. 1348. Record: Re-entry: 13582.75 lbs. milk; 787.03 lbs. butter.

List of Great Producing Dams

Corrected to March 1, 1914

Great Producing Dams. A list of Great Producing Dams who have two or more progeny in the Advanced Register.

The list shows the number of sons and daughters that have been registered to all those Dams given in the list who appear in the Herd Register of the American Guernsey Cattle Club. All of the progeny which are in the Advanced Register will be found arranged alphabetically either in the list of A. R. Sires, or producing dams respectively with the data regarding them given in detail.

The names of those who are not imported, but are registered in the herd book of the English Guernsey Cattle Society or the Royal Guernsey Agricultural Society (Guernsey and Alderney branches) appear in Italics.

Adele of Riverside 15314, A. R. 956.
Record: 8371.90 lbs. milk; 375.85 lbs. butter fat.

Breeder and owner:
Frank Lawson, Rosendale, Wis.

49270 **Pansy of Homedale Farm**
Sire *St. Amant of Sunset Lodge* (18790)
Dam *Fawn of City View Farm* (31024)
Born—Feb. 9, 1912
Fawn with white markings.
Breeder and owner:
Ira E. Coon, Spencerville, Ohio.

49271 **Fawn's Pride of Homedale Farm**
Sire *St. Amant of Sunset Lodge* (18790)
Dam *Fawn of City View Farm* (31024)
Born—Jan. 11, 1914
Fawn with white markings.
Breeder and owner:
Ira E. Coon, Spencerville, Ohio.

49272 **Imp. Dolly of Arnott**
Sire On Alderney *Raymond III.* (R. A. A. S. 111 P. S.)
Dam *Imp. The Admiral's Fanny of Alderney* (43918)
Born—Aug. 10, 1913
Imp. in dam.
Fawn with white markings.
Breeder—P. Herivel, Island of Alderney.
Owner—Ottesen & Ambal, Albert Lea, Minn.

49273 **Masher's Winsome Sequel**
Sire *Masher Sequel Mapleton* (18437)
Dam *Imp. Ivy des Islets* (35753)
Born—Jan. 24, 1914
Light fawn with white markings.
Breeder and owner:
M. G. Keenan, Oneonta, N. Y.

49274 **Imp. May Blossom of the Isle**
Imp. as *May Blossom* (R. G. A. S. 11594 P. S.)
Sire On Guernsey *Governor of the Chêne* (R. G. A. S. 1297 P. S.)
Dam On Guernsey *Jink's Baby III.* (R. G. A. S. 8379 P. S.)
Born—May 1, 1912
Imp. with No. 49057.
Red fawn with white markings.
Breeder—T. Mansell Simon, Island of Guernsey.
Owner—F. S. Peer, Ithaca, N. Y.

49275 **Raymond's Myra**
Sire *Imp. Raymond's Pride* (19120)
Dam *Captain Molly of Spring Valley Farm* (36032)
Born—May 9, 1913
Fawn with white markings.
Breeder and owner:
David W. Jones, Nashotah, Wis.

49276 **Rose Royal of Summit Dale**
Sire *Royal of Broadford* (18702)
Dam *Carlotta of Summit Dale* (34537)
Born—Sept. 27, 1913
Red fawn with white markings.
Breeder and owner:
A. C. Baker, Alfred Station, N. Y.

49277 **Teetsel's Frances**
Sire *Mamy's King of Tarbell Farms* (17331)
Dam *Cazenovia Pearl* (19187)
Born—Aug. 9, 1913
Dark fawn with white markings.
Breeder and owner:
R. L. Every, Delhi, N. Y.

49278 **Marcus Glenwood's Glory**
Sire *Marcus Glenwood* (13593)
Dam *Sir Gypson's Glory* (24668)
Born—Jan. 29, 1914
Light fawn with white markings.
Breeder and owner:
Grant M. Enlow, Fairfield, Iowa.

49279 **Golden Queen of Fern Ravine**
Sire *Old Abe* (16631)
Dam *Mildred of Fern Ravine* (20314)
Born—Jan. 1, 1914
Light fawn with white markings.
Breeder and owner:
Fred Vogel, Jr., Milwaukee, Wis.

49280 **Bess of Locust Lane**
Sire *Bonnie Coral Boy of Haddon* (13089)
Dam *Christy Belle of Locust Lane* (20031)
Born—May 28, 1910
Fawn with white markings.
Breeder and owner:
Est. John Killinger, Etters, Pa.

EDGEMONT CELOSIA 31725

IMP. BEAUTY III. DU DOUVRE 34254

2575 Edgemont Celosia 31725

Sire Celosia's Soapstone Lad (11275) A. R.

The Great Herds of all time have built up by the use of Great Sires

We are building up a great herd at Woodend Farm

To this end we have added **Three Great Sires.** The first of these is

May Rose King 2nd

Sired by the great May Rose King, son of May Rose 2nd, and out of Imp. Secret's Primrose by Golden Secret, who is a grandson of May Rose 2nd. The union of the blood of May Rose King, with that of a daughter of Golden Secret, is the most potent May Rose breeding possible. May Rose King 2nd is a **show bull**, and a sire of show animals as well as producers. One of his sons was 2nd as a two-year-old at the last National Dairy Show, another was first in yearling bulls at Brockton in 1912. Three of his sons now head five herds. His first daughter to be entered in the A. R. made 448.69 lbs. at 2 years, 5 mos., two others now in test promise to do as well or better. We will show you his picture later, we will also tell you of our other new sires. We always have fine bull calves by first-class and A. R. sires and out of A. R. cows. Come and see them; if you cannot come, write for list. If you are interested in anything listed, we will send his picture and more particulars.

B. BIERI, Supt. Woodend Farm, Mound, Minn.

TARBELL FARMS GUERNSEY HERD

We are entirely sold out of Guernsey bulls of serviceable age, but still have a number of bull calves from two to six months old. They are excellent individuals, and of good breeding. A. R. dams. Send for sale list.

HELENDALE FARMS

Athens - Wisconsin - Portage

Office, 700 Cedar Street, Milwaukee

Give us the Guernsey Cow for profitable dairying and there are none handsomer.

For building up a dairy herd from common stock, there is none to compare with the Guernsey sire.

The new list of young bulls, 8 months to 2 years old of the famous Yeksa and Materna families, recently issued by Helendale Farms, has met with so much approval, and is so nearly disposed of, that a supplementary list has been added, this giving a few more opportunities to secure a well bred sire at reasonable prices.

They are tuberculin tested and guaranteed. They will be disposed of in the order in which acceptances are received.

List on application to above address.

FOR SALE--A few promising Heifer Calves

J. W. WEBB

Syonet, Long Island, N. Y.

Bethany, W. Va.

The Agricultural Guild

Offers for sale **at moderate prices** a few bull calves **good enough to head choice herds,** and at low prices. Bulls that will improve most herds. In herds belonging to the members of the Guild are found the following bulls :

Imported Border Raider 22243

He is a show bull of very high quality, which he impresses on his calves. He carries 30 per cent. of the blood of May Rose II.

Imp. Pride of Day 1849 P. S.

He was a King's Cup winner on the Island. His full sister produced 583 pounds of fat as a two-year-old. His calves are uniformly good.

Stranford's Glenwood of Pinehurst VII. 17392

This bull furnishes the best combination of the Selma, Dairymaid, Stranford Princess and Glenwood blood to be found. His calves are very choice.

Besides these great bulls, our herds contain sons or grandsons of Governor of the Chene, and King of the May.

With the best of bulls, and two hundred cows, one-half of which are tested, we are in a position to breed Guernseys intelligently.

SPECIAL OFFER---Lady Dudley's Diamond 17977

This is a strong bull of good conformation. His dam has just completed a record of 13000 lbs. milk and 610 lbs. fat. His sister, Marshall's Lady Dudley, Class G, has made 6260 lbs. of milk and 290 lbs. of fat in five months. He is sired by Polo III of the Vauxbelets, a prize winning bull at the head of the J. P. Morgan herd. This great four-year-old bull should head some good herd.

We can furnish a carload of high producing grade cows at from $100 to $200 per head

We are Breeders, not Dealers

We offer for your selection choice young bulls backed by good records. We price them worth the money. We veal all bull calves that are not reasonably sure to improve the dairy stock of the country. We guarantee satisfaction.

All our Herds are Tuberculin Tested

Every Guernsey Breeder

SHOULD HAVE

Hoard's Dairyman.

No other publication in the world has **labored as ably or zealously for the advancement of dairying.** It is a mighty power in the dairy world for the dissemination of sound dairy practice.

No publication we could name would make a more complete or better combination with the Guernsey Monthly. **Both journals** be long on the reading table of **every man interested** in Guernseys.

By special arrangements with the publishers, we are able to offer

GUERNSEY BREEDERS' JOURNAL

AND

HOARD'S DAIRYMAN

Both One Year for $2.65

Dont fail to take advantage of the combination. When you renew for the Guernsey Breeder's Journal do not forget to include HOARD'S DAIRYMAN.

Guernseys Deserve Good Ensilage

To keep ensilage fresh, sweet and succulent from the time the silo is filled until the last forkful is fed, you need to protect it from heat, cold and moisture. The

NATCO IMPERISHABLE SILO

is built of vitrified clay hollow blocks which contain two dead air spaces. The non-porous quality of these blocks and their glazed sides exclude all air and moisture. They make a silo wall that is

Weatherproof, Decayproof, Fireproof, Verminproof

The "Natco never needs painting—no hoops to tighten—no continual repair bills. It lasts for generations and keeps ensilage in perfect condition *always*. Attractive in appearance—an asset to your permanent farm buildings. *Any mason can erect it.*

Write today for illustrated book No. V. describing the construction of this better silo—mailed free.

Westchester County, Bedford Hills, N. Y.

Here's a Safe Guide for You When Your Cattle Get Sick.

Many and many a time your animals get sick, and you would like to treat them yourself—You may have this greatest of all live stock books to aid you.

DR. DAVID ROBERTS'
PRACTICAL HOME VETERINARIAN

It covers every disease, makes the symptoms plain. And it is written by Dr. Roberts, the National Veterinarian, who has been Official Veterinarian year after year at the great Live Stock Shows and is called to all parts of the country to treat valuable animals. It is

A 184-Page Cloth Bound Book

fully illustrated. You can get it at most drug stores where Dr. Roberts' live stock medicines are also to be had. You should not fail to get it and keep it as a permanent guide and reference book. It will be sent direct on receipt of 25c. if you do not find it at your drug store. Ask the druggist or send for it today and be ready for emergencies Medicines sent direct where druggists do not keep them in stock. Address,

Dr. David Roberts Veterinary Co.,

4057 Wisconsin Ave., - - Waukesha, Wis.

Mortality Insurance

FOR

HORSES and CATTLE

I can insure your stock under a policy that covers the animals anywhere in the United States of America and Canada, against all risks and hazards as well as their trans-shipment from one point to another.

Molassine Meal

MADE IN ENGLAND

Just what Cows need with June Grass

It Prevents Colic and Indigestion

Molassine Meal is a scientific feed, made under a formula with 20 years experience of expert feeders back of it.

The specially prepared process **by which it is made produces a feed absolutely unlike anything else in the world.**

For 20 years it has watched imitators come and go, but to-day Molassine Meal is the one and only feed of its kind that will correct the dangers and ills of green grass feeding.

You need have no fear about the keeping qualities of Molassine Meal—it has no "expiring date" when it ceases to be good. Molassine Meal gives satisfaction twelve months in every year. It is made right--therefore it keeps even in the hottest days.

Guernsey Cow Owners

must not be deceived by "something just as good." Expert feeders know there is nothing that does the work like
MOLASSINE MEAL

Twenty years of world approval of this unique feed warrants your faith in it for all your farm stock; it is equally good for

Cows, Horses, Pigs, Sheep and Poultry

We will be pleased to send you our new souvenir book—just off the press. It shows you views of our wonderful mill in England; it gives you valuable information about "The use of Sugar as a Food for Animals." Just a postal card brings it to you by return mail; it is worth sending for.
